4957. Fire Tone-Out

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-03 07:42:51 UTC
From: Matt Roberts
Topic: 4957 Message: 4957

I will be purchasing a BCD396XT scanner in the next week.
I'm interested in the Fire Tone-Out feature. I want to set the scanner to activate only for my local fire station. I don't know the tone frequencies that are used. I read in the manual about the tone search mode. The manual states you put "0" in A and B, and that will initiate the search. When the tone is received you want to program, you press "E." The question is how long do I have to press "E" once the tone is received? Can I monitor the frequency during search mode, and when the right tone is received store it?

Matt Roberts blindbiker@...

4958. BC396XT Firmware Update

Yahoo group: BCD396XT (2011 — 2014)

As long as you have to press it for any other function (way less than one second).

No - the unit is muted until it decodes a tone or tone set.

You will recieve any and all tone outs that occur while in FTO search mode. You have about 30 seconds I think after an alert (before it automaticaly resets) after they finish talking to press E to save the tones. Unless the station you want is really busy you could be waiting a while. The best way to get one o two departments tones is to do it when they do their daily or weekly test whichever they do.

You can also hit the HOLD button to toggle between tone-out search mode and tone-out hold mode (allows you to monitor traffic on the frequency you programmed)

They don't do any kind of testing here. You just have to wait till the station you want is called.

Joe and John are both correct, as usual. However, in the tone search mode, some/most of the time the tone frequency received is not exactly in the middle of the tone, if you will. In other words it is just a few cycles above or below the specified tone frequency.

<http://www.genave.com/mot_quick_call_2.htm> (2-tone paging)

<http://www.genave.com/mot_quick_call_1.htm> (single tone paging)

Conclusion: Read the tone frequency that the tone search has presented. Then, just look at one of the lists above to find the EXACT tone frequency to enter into the radio.

The radio searches and decodes tones sucessfully.
Seems like looking at a chart afterward is an unnecessary step for
final programming...

You sure about that, I don't know of ANY dispatch center that doesn't do at the least weekly alert testing. Some here even do daily tests and one does morning and evening tests. Where I dispatched we did weekly tests of the entire county as did the county. We were the backup dispatch for county fire and EMS.

Depends, most of the time I find my units are slightly off on the decode, good enough to work, yes, but more accurate tone setting from chart woks much better. Also, in the cases of a few tones used here they are non-standard tones and not on the list.
For me it's a mute issue though as I get a list each time the county changes it's tones (rare) so I always hae up to date tones for all the fire/EMS in the county.

4971. Blind Scanner User Extremely Frustrated!

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-04 21:06:48 UTC
From: Matt Roberts
Topic: 4971 Message: 4971

I was ready to buy a BCD396XT scanner from Uniden. I called the company and asked if the scanner could be used by a blind person. I just wanted to see what they would say, since they have an accessibility number. Two people at the company told me the BCD396XT scanner can't be used by a blind person. When I asked if there was anything a blind person could use, I was told "no!" When I asked why blind people can't use Uniden scanners, I was told the marketing department didn't consider the need for blind people to use the products. When I asked why blind people can't use them, I was told the scanners are menu driven, and the menus change. It's all visual!
I don't understand! FreeScan is fully accessible with a screen reader. In fact, the program has a "Blind Friendly Mode." I can program the scanner, but I can't use the device? Is it the company doesn't wish to find ways for me to use their product, or is it really true? IF I buy this product, as soon as I need support, and I call the company they won't help me because they think a blind person can't use it. HOw will I get information on how to do things? I have an idea how to do most stuff, but I'm sure questions will come up. Sometimes calling technical support is the easiest way to get questions answered, but since I can't do that, what can I do?
YOur input would be appreciated!

There are always the list here and others, and forums you can get get help through. And if really needed I am sure myself or someone else on the list can help one on one or on the phone.
The newer scanners are not "blind" friendly, not just Unidens but GRE/Radio Shack as well.
Not sure where you are but there is probably someone neaby who can/would help in person if needed. Once you learn the controls you will be fine.

4973. RE: [BCD396XT] Fire Tone-Out

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-04 22:19:13 UTC
From: RobertKlamp
Topic: 4957 Message: 4973

Mr. stark is right about that the tone decoded by the scanner is usually off by a few Hz i have always used a list to find the exact tone or tone pair. Theirs a few things working against you when searching for tones the scanner is wide band so there could and probably is some distortion to the signal from a third party source that you mite not even notice that is leaking into the frequency your searching out tones on and that could cause tone deviation as to where its off a few Hz also nothing decodes perfectly the only reason it finds the exact PL or DPL if you're searching is because they are a set tone they never change and are preprogrammed into the radios memory so even if a PL/DPL is off a little the scanner can revert to its closest correct tone with fire tone out searches the tones are not programmed into memory there are just to many of them used in to many different combinations so what you're scanner decodes may not be exactly correct which is why looking up the proper tone will help you with fire tone out because you may actually miss some calls if the tone you decoded deviated to much from the actual tone.

Hope this helps some to understand,
Bob

Well if you want one and customer support wont help you due to your disability first lodge a big complaint with the company that told you a blind person can not use it and there for was told he could get no tech support from the manufacturer. Second I'm constantly on this group as well as many other people that are very knowledgeable when it comes to these radios and we would be more than happy in assisting you in what ever you need help with that has to do with the radio. Sorry they let you down like that Uniden is usually very end user friendly to the consumer whether it is with questions or repairs. UPMan you seen this thread maybe you can give this guy a little re assurance about purchasing one of the best radio scanners on the market. But if all else fails fall back on the group and all your questions should be answered.

Hope this helped,
Bob

I have an idea how to do most stuff, but I'm sure questions will come up. Sometimes calling technical support is the easiest way to get questions answered, but since I can't do that, what can I do?
YOur input would be appreciated!

Here is what "blind friendly" means to me. Can the keys be identifiable by touch? Can you easily turn on and off the scanner? Can you turn off sites, systems, or groups using the keypad. Can you access a channel you've locked out without accessing the menus?
I want to program my local airport frequencies. I have to lockout the ATIS frequency, because it transmits continuously. Can I lockout this channel, and access it when I want?
I don't want "Search with Scan" enabled, but want to access certain service searches. I also want to easily access the tone-out feature. Can this be done?
If I can do some of this stuff, or all of it, the scanner is usable by a blind person.
Therefore Uniden is wrong when they say a blind person can't use this product.
I don't need to "see" which talk group is active, because after a while, I can tell by listening to it. I can also use the unit numbers I her, as well as knowing the dispatchers' voices.
Programming the scanner is not possible if you're blind, using the scanner itself, but that can be done with software. Most people use software anyway, so that is not a big thing to me.

I live in Port Orange Florida. This is located in Volusia County Florida near Daytona Beach. Web forums are difficult to use with a scene reader, so I only use them if I absolutely must do so.

Matt,

You've come this far. Keep going. Lots of pople on here who use
this radio and often. Means lots of empirical experience at your finger
tips. Thats what this group is for. Support/Input/Experience...

Heyya Matt:
From one blind scanner user to another. I am sure you will figure out the best way to use the 396. While yes, I will agree scanners are much more difficult to use now days than they were in the past due to their minus. I do not think it is impossible at all. John brought up a very good point & one I have used in my area for many years now. Go to the yahoo groups & see if there is a yahoo scan group in your area. I know that there is one here in Chattanooga & a great deal of cities/ areas have them. & they are more than willing to help you with your scanner. I know they have been to me. & I have met allot of great friends threw this group. Good luck & if you need any further information please feel free to write me off list & give me any contact information which You'd like such as skype instant messengers etc. Look forward to hearing from you soon

Well if you want one and customer support wont help you due to your disability first lodge a big complaint with the company that told you a blind person can not use it and there for was told he could get no tech support from the manufacturer. Second I'm constantly on this group as well as many other people that are very knowledgeable when it comes to these radios and we would be more than happy in assisting you in what ever you need help with that has to do with the radio. Sorry they let you down like that Uniden is usually very end user friendly to the consumer whether it is with questions or repairs. UPMan you seen this thread maybe you can give this guy a little re assurance about purchasing one of the best radio scanners on the market. But if all else fails fall back on the group and all your questions should be answered.

Hope this helped,
Bob

I don't want to go the GRE Radio Shack route again! That was what Uniden said I should do, look at another manufacturer. When I got my last scanner, Pro96, I was fortunate to find someone who was knowledgable about the product. Between him spending time with me at the store, reading the manual, and using software, I was able to use the product effectively. The closest place I could go that sells BCD396XT is located in Orlando. That's about 60 miles away, so mail order will be my only options. I'll need to figure out the controls, and location.
The company already has the idea a blind person can't use the product. Tech support didn't tell me they would not help me because I'm blind, however, I'm sure if I ever have to call, I'll get the runaround.
I tried to find a phone number for Uniden's corporate office, but I have ben unsuccessful. People who work the 800 lines won't give you one, because they claim one doesn't exist. Customer service reps don't want you to call the corporate office, because if they've done something wrong, they know they'll get in trouble for it.
Anyone who wants to give me their contact information, I'll gladly put it in my address book.

Matt Roberts

Matt,

Most of what you want to do is easy enough once you learn the keys. Channel lockout may be an issue, but if you set up Quck Keys it won't be a problem.

In my area, testing is rare anymore. Only two counties out of five to
any scheduled testing - one tests once every month and the other tests
departments weekly, but only for maybe 10 of the close to 200
departments. That's only because they were grandfathered from older
dispatch centers, I think.

Any dispatch center will test upon demand, however.

Threaded. I hope you can read this OK.

Matt Roberts wrote:
>
> Here is what "blind friendly" means to me. Can the keys be identifiable by touch?

Yes. The keys are regular button keys.

> Can you easily turn on and off the scanner?

That's via the volume knob, like most scanners.

> Can you turn off sites, systems, or groups using the keypad.

Provided you have them set up with Quick Keys, yes.

> Can you access a channel you've locked out without accessing the menus?

Provided you have set the Channel Number Tag, yes.

> I want to program my local airport frequencies. I have to lockout the ATIS frequency, because it transmits continuously. Can I lockout this channel, and access it when I want?

Yes. The same as the other answer just above. Same as any other channel.

> I don't want "Search with Scan" enabled, but want to access certain service searches.

Again, if you have set them up with a Quick Key, that is easy.

> I also want to easily access the tone-out feature. Can this be done?

That one may not be easily done. I don't recall if that can be assigned
to a function key or not.

> If I can do some of this stuff, or all of it, the scanner is usable by a blind person. Therefore Uniden is wrong when they say a blind person can't use this product.

You're dealing with matters of degrees here. Can a blind person use the
menus? Yes, if you can remember the order of the menus. But for the most
part the menus would have to be seen to be used.

I can see why Uniden said no based on this factor. However, once the
scanner is programmed, most functions can be accessed as described above.

> I don't need to "see" which talk group is active, because after a while, I can tell by listening to it. I can also use the unit numbers I her, as well as knowing the dispatchers' voices.
> Programming the scanner is not possible if you're blind, using the scanner itself, but that can be done with software. Most people use software anyway, so that is not a big thing

to me.

And virtual control via software is another aspect that may be of use to you.

That's hard to answer without knowing what type of area you live in (rural, suburban, or urban) and what Police/Fire etc you want to listen to. Also frequency is helpful because the recommendation for a purely trunked (800 Mhz) environement will be different than for a mixed freq area

Does anybody have any suggestions for a roof top antenna for bcd396xt?

es it can! It's search key "1" on my future scanner.
>
>> If I can do some of this stuff, or all of it, the scanner is usable by a blind person. Therefore Uniden is wrong when they say a blind person can't use this product.

Virtual control is of interest. FreeScan even has keyboard commands which make it usable by a blind person. If the scanner display appears as text on the computer screen, a blind person could access everything. The person could get talk group information which could not have been gotten by looking at the display.

I have a similar discone D130J Super Discone Antenna in the attic with
good results for wide band coverage. Live about 30 miles west of NYC
line of sight and receive them well.

4995. 396XT Questions and FreeScan

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-06 01:57:44 UTC
From: Matt Roberts
Topic: 4995 Message: 4995

I'm in the process of programming a conventional system for my future BCD396XT. I see a field called "NAC" where the channel information is displayed, which defaults to SRCH. What is this field used for?
I also found in order to put channel tags in this system, I have to change this field to "null" before the number tag field is displayed.
What do I press to get to a channel I've assigned with a number tag? I understand if you've assigned a Quick Key to a system, you can go directly to a channel by pressing System.Tag. I'm missing some key presses. What do I press?
I also understand in a trunked system, it is possible to go directly to a talk group. What do you press to do this?
IF you have systems set to scan by default on a startup key, and you decide you want to scan different systems, can you just turn off what you don't want, and turn on what you want?
For the Service Search Keys 1, 2, 3 what mode do you have to select on the scanner before you can activate those?

NAC is the P25 version of analog's CTCSS/CDCSS.

To go directly to any channel, program the System Number Tag and Channel Number Tag, then press on the keypad "SNT.CNT" and hit the MENU button.

"Yes" on the Startup Key question.

Ok,
I don't understand your point? I am the one that listed the Tones for Escambia and Santa Rosa Counties. And even though the tones are listed, does not mean they do pager tests daily, weekly, monthly or even yearly... as I stated. Tone-out pagers are tested on request by a STATION OFFICER ONLY!

I also put the Santa Rosa County, FL Pager Tones on RR Wiki, as well. As I said, I was an alerting officer/dispatcher for about 10 years here. Lt. for 2 and Major (Commander of Comms.), for 1 year at a local agency. Bob Boschen is the Escambia County, FL Communications Chief at this time and has been for some time. Email him if you do not believe me!

Walter

From: Ronski45
Topic: 4986 Message: 5000

I use the same one too.
Ive had mine for 15+ years and it still there.

Getting an antenna its cost, installation and you lose portability too.

I will say this about the radio shack discone antennas over the years
and recent that all I hear is they are cheap construction!
I have a diamond discone and its been through blizzards, 80+ mph wind
storms etc. and all the elements are still there after about 15+ years.
I worked with a guy in the last month trying to fix up his scanner in
town and he had a shack antenna, whelp he found that some rusted screws
were the culprit!
http://forums.radioreference.com/antennas-coax-forum/80105-rs-discone-antenna.html
Check out comments http://www.eham.net/reviews/detail/2777
See for yourself
http://www.radioreference.com/apps/Search/?cx=014732645207632841850%3Afkjydvmuoq4&q=radio+shack+discone+antenna&sa=Search&cof=FORID%3A9&name=Search

Unless it would be a short cable run dont use typical cable tv stuff -
rg58, rg 59. Try RG6 what I used since the signal loss /foot is very
high on the latter two and not so on rg6 which I did get at radio shack
off a spool.

5001. RE: [BCD396XT] Re: Roof top antenna for bcd396xt

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-08 15:42:00 UTC
From: Michael Hopkins
Topic: 4986 Message: 5001

I use the Diamond discone which is a superb broad-band omni-directional antenna. I use it with the BCD396XT, a Yaseu handheld, and my Kenwood TS2000 on 2 and 6 meters .

One caution --- when using any external antenna, the coax type and length is critical at VHF and UHF Frequencies --- the higher you go; the greater the loss per foot for any coax. My antenna is on a 30 foot pole and fed with 75 ohm ½ inch hard line (former cable TV stuff which can be found pretty cheap) plus a short 3 or 4 foot length of RG 8 to the radio. I also use a pre-amp about a foot away from the radio receiver (of course, a pre-amp right at the antenna is much better, but since I use it for transmitting as well as receiving I couldn☐t easily accomplish putting it at the antenna.).

To put it in perspective approximate losses/100☐ for common coax are (divide by 100 to get loss/footJ)

150MHz 450MHz 900MHz

RG 58/U 6.2dB 10.6dB
16.5dB

RG 8X 4.7dB 8.6dB
12.8dB

RG213/214 2.8dB 5.2dB 8.0dB

As you can see the losses go up quickly. For an antenna with a 30 foot length of RG 58/U coax, the loss at 900MHz would be 4.95dB (very slightly less for 850MHz trunked systems and enough to negate much of the advantage of having the external antenna!)

Hope this is helpful.

Michael

75 Ohm coax for a 50 Ohm reciever? There is loss there too, you should always match the Ohms as well.... and never use TV coax for scanner use. Pre-amp or not. And even moreso, never EVER use TV Coax for amature radio and transmitting! We went to one guys home once who was transmitting with that ..... we had to put out the fire. The coax melted onto an electrical line it crossed and well, the rest is history.... so was his home. His comment "but it was only 25 to 50 watts..... doesn't matter, those cables are NOT made for transmitting with ham gear at any wattage.
You have those two expensive radios you can afford to get PROPER coax..... $40 to $50 for LMR-400 and that would eliminate the inline amp too!. Heck, I just bought 100 ft of Times Micro LMR 400 for $69 plus $7.00 shipping.

Subject: RE: [BCD396XT] Re: Roof top antenna for bcd396xt

I use the Diamond discone which is a superb broad-band omni-directional antenna. I use it with the BCD396XT, a Yaseu handheld, and my Kenwood TS2000 on 2 and 6 meters..

One caution --- when using any external antenna, the coax type and length is critical at VHF and UHF Frequencies --- the higher you go; the greater the loss per foot for any coax. My antenna is on a 30 foot pole and fed with 75 ohm ? inch hard line (former cable TV stuff which can be found pretty cheap) plus a short 3 or 4 foot length of RG 8 to the radio. I also use a pre-amp about a foot away from the radio receiver (of course, a pre-amp right at the antenna is much better, but since I use it for transmitting as well as receiving I couldn't easily accomplish putting it at the antenna.).

To put it in perspective approximate losses/100' for common coax are (divide by 100 to get loss/footJ)

150MHz 450MHz 900MHz

RG 58/U 6.2dB 10.6dB 16.5dB

RG 8X 4.7dB 8.6dB 12.8dB

RG213/214 2.8dB 5.2dB 8.0dB

As you can see the losses go up quickly. For an antenna with a 30 foot length of RG 58/U coax, the loss at 900MHz would be 4.95dB (very slightly less for 850MHz trunked systems and enough to negate much of the advantage of having the external antenna!)

Hope this is helpful.

Michael

RG6 is 75 ohm and it is used quite often in receiving signals for scanners, etc. I am not sure about transmitting with 75 for a 50 set up so I can't say there. I know there isn't a perfect match there but it really does work pretty good.

No I know uses it.... and for good reason, it doesn't work so good. Besides the fact cable tv being severly lossy it's also not as well insulated and allows a lot of signals in most don't want for scanner use. You would be amazed at the difference between 50 ohm even cheaper stuff and cable tv coax. Or get some real coax like 50 ohm LMR-400 and see a huge change. After using LMR-400 once I'll never use anything less, even in mobile setups.

LMR400 is great stuff. As we know it is pretty hard to work with because of it's girth. Has anyone used LMR 200 or 300? My first guess would be they would be easier to use because they are smaller cable sizes and because it is a quality cable still good for 800MHz etc receiving. Does anyone have an opinion on it?

It's equal to lesser quality (200/300) cables, LMR-400 makers do have more flexible LMR400 cable that uses stranded center vs solid center. And for ultimate flexibilty and small size there is the low loss LMR-600.... but get ready to pay a bit more for it.

LMR400 is great stuff. As we know it is pretty hard to work with because of it's girth. Has anyone used LMR 200 or 300? My first guess would be they would be easier to use because they are smaller cable sizes and because it is a quality cable still good for 800MHz etc receiving. Does anyone have an opinion on it?

No I know uses it.... and for good reason, it doesn't work so good. Besides the fact cable tv being severly lossy it's also not as well insulated and allows a lot of signals in most don't want for scanner use. You would be amazed at the difference between 50 ohm even cheaper stuff and cable tv coax. Or get some real coax like 50 ohm LMR-400 and see a huge change. After using LMR-400 once I'll never use anything less, even in mobile setups.

RG6 is 75 ohm and it is used quite often in receiving signals for scanners, etc. I am not sure about transmitting with 75 for a 50 set up so I can't say there. I know there isn't a perfect match there but it really does work pretty good.

75 Ohm coax for a 50 Ohm reciever? There is loss there too, you should always match the Ohms as well.... and never use TV coax for scanner use. Pre-amp or not. And even moreso, never EVER use TV Coax for amature radio and transmitting! We went to one guys home once who was transmitting with that ..... we had to put out the fire. The coax melted onto an electrical line it crossed and well, the rest is history.... so was his home. His comment "but it was only 25 to 50 watts..... doesn't matter, those cables are NOT made for transmitting with ham gear at any wattage.
You have those two expensive radios you can afford to get PROPER coax..... $40 to $50 for LMR-400 and that would eliminate the inline amp too!. Heck, I just bought 100 ft of Times Micro LMR 400 for $69 plus $7.00 shipping.

Subject: RE: [BCD396XT] Re: Roof top antenna for bcd396xt

I use the Diamond discone which is a superb broad-band omni-directional antenna. I use it with the BCD396XT, a Yaseu handheld, and my Kenwood TS2000 on 2 and 6 meters..

One caution --- when using any external antenna, the coax type and length is critical at VHF and UHF Frequencies --- the higher you go; the greater the loss per foot for any coax. My antenna is on a 30 foot pole and fed with 75 ohm ½ inch hard line (former cable TV stuff which can be found pretty cheap) plus a short 3 or 4 foot length of RG 8 to the radio. I also use a pre-amp about a foot away from the radio receiver (of course, a pre-amp right at the antenna is much better, but since I use it for transmitting as well as receiving I couldn't easily accomplish putting it at the antenna.).

To put it in perspective approximate losses/100' for common coax are (divide by 100 to get loss/footJ)

150MHz 450MHz 900MHz

RG 58/U 6.2dB 10.6dB
16.5dB

RG 8X 4.7dB 8.6dB
12.8dB

RG213/214 2.8dB 5.2dB 8.0dB

As you can see the losses go up quickly. For an antenna with a 30 foot length of RG 58/U coax, the loss at 900MHz would be 4.95dB (very slightly less for 850MHz trunked systems and enough to negate much of the advantage of having the external antenna!)

Hope this is helpful.

Michael

My best antennas are the ChannelMaster Triband 5094A with LMR400, but they have been disc-, the "coax" really makes a antenna and LMR400 hears the ILL-700/800 Digital System on these great and other stations at great distance...I also use one on the tower and three in the attic of the RShack 25-1.3gig groundplane which is small and receives great....

John -

You might be confusing RG-6 with RG-59. Both are 75 ohm "TV cable" coax. RG-59 is the older cable stuff... very lossy and often not well-made. RG-6, on the other hand, was developed for TV satellite downlinks and performs very well at high frequencies. The quad-shield variety, in particular, is extremely well shielded.

I have been using good quality RG-6 as scanner coax for many years and have been more than satisfied with its performance. Given the wide frequency excursions of most scanning receivers, the 75-50 ohm mismatch is inconsequential (for receiving only).

I would NOT recommend 75 ohm cable for transmit use. Like you, I am a fan of LMR-400 for transmit purposes.

73,

John - AC4JK

Maybe I should add to this a bit and say that spending $500 for a radio why would anyone skimp on coax or antenna for that matter. I want the best reception even for local traffic in the worst conditions. Asking a reciever to recive through the worst conditions requires not skimping on coax or atenna. I don't miss much in my county, and in many cases I hear better than the dispatchers do. On a couple occasions I actually relayed for dispatch what the officers were saying because I could hear the officer and dispatch couldn't hear them at all.... not good when the one incident there were shots fired and the officer was calling for assistance!

5012. New BCD396XT Owner

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-10 23:45:38 UTC
From: Matt Roberts
Topic: 5012 Message: 5012

After asking a lot of questions, and researching for a week, I have decided to purchase the 396XT scanner. I'll be placing the order tomorrow, so it'll probably arive next Monday.
Between now and then, I'll be asking a lot of questions. One thing I need to find out is the controls in the order in which they appear. Since FreeScan works well with screen access software, I'm going to do a recorded tutorial for blind people who want to purchase Uniden scanners. I'm not sure where I'll post it, but hope I can get permission to announce on the list when it's done.
If I want to use one of my service search quick keys, do I need to activate service search first? I programed that as quick key "72." Do I have to activate my service search quick key to access keys 1, 2, and 3?
IF I activate the tone-out feature, and then decide I want to scan again, do I just hit the scan button?

From: Matt Roberts
Topic: 5013 Message: 5013

The section of the manual that discusses Fire Tone-out is confusing.
It indicates that you will be alerted for all tones for each frequency
for which you have programmed.
IN my area, we have four fire stations. I have them all programmed as
Tone-outs 1, 2, 3, 4. Will I be alerted for all stations, or just the
one I select?
Also, I have Tone-out assigned to a quick key. The manual states you
need to select "Tone-out Standby" to have the scanner alert for tones
programmed. Can anyone give me the tone-out menu options in order?
I'll have to memorize exactly where "standby" is so I can enable it.

Topic: 4986 Message: 5014

Just a couple of points about the roof top antennas and coax and then I'll go away…..

Regarding the comments about keeping the Ohms the same: Generally this is good practice. For 50 ohm radios and 50 ohm antennas you should use 50 ohm cable, but there are many cases where 50 ohm radios are connected to antennas that are 75 ohms, 300 ohms, 600 ohms or other impedances. In these cases many different transmission line schemes are used including using "matching" sections of cable of different impedances, matching devices at the transmitter/receiver and/or matching devices at the antenna….

In the particular case of using 75 ohm cable with a 50 ohm radio and 50 ohm antenna are trivial – for transmitting in my system, the SWR is about 1.3:1 which means a loss of a few percent of power. No big deal – a few watts out of 100W.

We can also look at what's called "Mismatch Loss", which for when calculated for a 75 ohm cable connected to a 50 ohm antenna results in a loss of around 0.2dB….. Not even worth considering….

Bottom line: Using 75 ohm transmission line with a 50 ohm antenna ain't a big deal….

Second Point: Cable TV coax isn't all the same. The stuff I use is about a ½" diameter semi-rigid cable which has a solid shield (not braid) and has a loss at 850MHz of about 2.0dB in a 50 foot run. Pretty good stuff….. The LMR 400 mentioned in some email is equivalent and also very good stuff… (BTW – LMR 200 has about 2.5 times the loss at 850MHz, or about 5dB).

I agree with the comments about RG58 and RG59 --- this is the worst stuff you could use. RG6 and RG8X are better but still no where near as good as using semi-rigid hard line. You'll need to use a much more flexible cable between the end of the hard line and the receiver, but the loss for even the bad stuff for a couple of feet won't hurt significantly…. If you use a short length of 50 ohm cable between the hard line and the receiver it may even help by providing a matching section at some frequencies.

All that said, getting an outside antenna up on a pole works wonders -- even though most broadband antennas such as a discone have no gain themselves, getting one up high on a pole and connected via GOOD coax will let you hear stuff you never though possible.

Michael

That depends on a lot of things, especially what you want to hear (frequency coverage), the type of area your in (flat, hilly, city. rural, high RF, low RF) and what you want to spend. You have a lot of choices, but there are limits too by the above. More info will help get you what you need.

Michael has made very good points here and is probably the best response
I've seen to the original question. Very few people own equipment
sophisticated enough to see any real signal difference due to impedance
mismatch between 50 and 75 ohm coaxial feedline.

Antenna height and feed line losses are the keys to a good system. If you
have access to any low loss cable, either 50 or 75 ohm don't hesitate to use
it. Your $500 scanner will not know the difference between $500 worth of
rigid hard line or $100 worth of quality 75 ohm TV coax. Like others have
said, avoid the cheap RG-58/59 stuff unless that is all you can afford.

You will be alerted for the FTO slot you select AND any other slots that use the same frequency and mode as the one you selected.

You will see them "scan" but the scanner is looking for all active slots (active being defined as I described above) at all times. The scanning is just showing you which slots are active.

> Also, I have Tone-out assigned to a quick key. The manual states you

Scroll knob selection is referenced below rotating the scroll knob clockwise looking at it from the top

MENU

TONE OUT FOR which is the seventh selection

ENTER button to access the Tone Out menu

ENTER button again since the TONE OUT STANDBY is the first selection in that level of the menu

The scanner will then be active on the last selected Tone Out slot.
Unfortunately, there is no indication when you select tone slot 1.
Perhaps Uniden could make the beep lower on slot number 1 in the future.

Michael Hopkins wrote:
> Just a couple of points about the roof top antennas and coax and then I'll go away…..
>
>
>
> Regarding the comments about keeping the Ohms the same: Generally this is good practice. For 50 ohm radios and 50 ohm antennas you should use 50 ohm cable, but there are many cases where 50 ohm radios are connected to antennas that are 75 ohms, 300 ohms, 600 ohms or other impedances. In these cases many different transmission line schemes are used including using "matching" sections of cable of different impedances, matching devices at the transmitter/receiver and/or matching devices at the antenna….
>
>
>
> In the particular case of using 75 ohm cable with a 50 ohm radio and 50 ohm antenna are trivial – for transmitting in my system, the SWR is about 1.3:1 which means a loss of a few percent of power. No big deal – a few watts out of 100W.

> Bottom line: Using 75 ohm transmission line with a 50 ohm antenna ain't a big deal….
>
>
>
> Second Point: Cable TV coax isn't all the same. The stuff I use is about a ½" diameter semi-rigid cable which has a solid shield (not braid) and has a loss at 850MHz of about 2.0dB in a 50 foot run. Pretty good stuff….. The LMR 400 mentioned in some email is equivalent and also very good stuff… (BTW – LMR 200 has about 2.5 times the loss at 850MHz, or about 5dB).
>
>
>
> I agree with the comments about RG58 and RG59 --- this is the worst stuff you could use. RG6 and RG8X are better but still no where near as good as using semi-rigid hard line. You'll need to use a much more flexible cable between the end of the hard line and the

receiver, but the loss for even the bad stuff for a couple of feet won’t hurt significantly…. If you use a short length of 50 ohm cable between the hard line and the receiver it may even help by providing a matching section at some frequencies.

We are talking about a matter of degree here. 0.2 dB (I didn't verify
that figure, but let's just say it's correct for the sake of argument)
may be perfectly acceptable to some people, but not to others.

You're all correct in what you are saying.

I've used 75 ohm cable (mainly because that's what the Scantenna comes
with), and I've noticed little difference compared to other antennas.
While I'm sure there is some difference, it's acceptable for the purpose
of that antenna. BTW, that is a 300 ohm feedpoint antenna, and it comes
with a balun that has a 75 ohm feedpoint, so 75 ohm cable is acceptable.
BUT, my scanner's input is 50 ohm, so that is where the loss is.

I won't know until I get the scanner, but I think I can set the tone-out slot I want to use with the computer. Once the slot is selected, I don't have to change it.

Here is a hint. If you are only interested in one set of tones, program
all the slots the same. That way you cannot accidentally select the
wrong one.

You will be alerted for ALL of the tones on the same frequency. although you can put in 10 "stations", you will only be alerted to the stations/tones on the same frequency you set the "tone-out" to.

Hope that helps,
Walter

Subject: [BCD396XT] Tone-out Standby

The section of the manual that discusses Fire Tone-out is confusing.
It indicates that you will be alerted for all tones for each frequency
for which you have programmed.
IN my area, we have four fire stations. I have them all programmed as
Tone-outs 1, 2, 3, 4. Will I be alerted for all stations, or just the
one I select?
Also, I have Tone-out assigned to a quick key. The manual states you
need to select "Tone-out Standby" to have the scanner alert for tones
programmed. Can anyone give me the tone-out menu options in order?
I'll have to memorize exactly where "standby" is so I can enable it.

I am putting up a Diamond DJ130N {the N is for a N connector the best to use for anything above 200MHz} discone with 50 foot of LMR-400 going to a Stridsberg MCA204M VHF/UHF 4 port Receiver Multicoupler and 4 BNC male to BNC male 4 foot jumpers of LMR-240 feeding a BCD996T ,BCD996XT, BC780XT and when at home my BCD396XT. As you can see its a LOW LOST system. I have a lot of 800Mhz TRS's here in South New Jersey, I have spent $100.00 on the LMR , $160 on the Multicoupler, and $99 on the Discone. Worth every dime! Let me tell you it works well. Right now its inside on a pole sitting about 3 foot off the floor. Its going on the roof when ever the snow stops here. (3 storms in 3 weeks a total of 15" so far). Also I use Proscan for my feed and Freescan or BCTool for programing.

If you like railroads you can hear my BCD996T @ n2icv.no-ip.org:5001/

I have to ageee with Michael. Here's some real world results: I used 75 Ohm cable TV hardline(also known as "750") to feed my Icom R-7000. Worked great. I came into a 500' roll of LMR 400UF & replaced the hard to work with "750" with the 400UF. Absolutely no difference in receive signal strength. I know a guy (K2RIW) who runs 10 Gig equipment & he uses "750" hardline. He is a consulting engineer for microwave installations. He gets the stuff for free from the local cable company. I also got it for free, just went to the local C/C and asked if the had any reel ends (stuff that's too short for them to use). I got about 95 feet.
The 1.3 : 1 SWR number is also correct & insignificant in
scanner and Ham Radio applications. And if you think you scanner presents a 50 Ohm load across its entire receiving range.....I have something to sell you that will make your SUV get 75 MPG..... :<))

5028. Re: [BCD396XT] Re: Roof top antenna for bcd396xt

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-11 18:17:49 UTC
From: Walter Jinright
Topic: 4986 Message: 5028

I have used LMR-600 (the thick hard stuff) with a multi-band and fairly expensive discone antenna @ 20' AGL as 75 ohm "TV" coax with a scantenna II, and actually have better RX on all bands (VHF-Low to 800 MHz). I guess it also is as the old saying goes, "location, location, location").

Joe,

The little difference that occurs at that mismatch point is not measureable with our scanners. You probably have more loss in the cable, connections and 300/75 feedpoint matching device than the impedance mismatch at your scanner's antenna connector.

I run my 396XT with a WEP thin whip. The antenna is designed for 144 and 445 mhz. It is extremely flexible and great for shirt or jacket pocket use. I cannot measure any signal difference on the East side of Cincinnati with this antenna vs. the stock Uniden antenna, especially at 850mhz where my WEP should be deficient.

If we were all into "weak signal work" then I would agree that any 75 to 50 mismatch must be corrected to mazimize our signals. But for what we do, it does not
present a problem that we can detect with the current scanner offerings from Uniden, GRE and RS.

eBay and Radio Reference good places to sell it.

Check prices on ebay to bid radio competitively.

If you have the box and all accesories that is a plus.

What's your next radio? or are you out completely...

Yes, I realize it takes 3 dB to make any difference that can be heard
with the human ear on an analog signal (maybe a little less than that
for P25), but all the little losses add up. Again, it's all in what you
deem acceptable. For most people, as I said before, it's likely a non-issue.

Of course, if you're transmitting it is a much larger issue.

5033. Printable Quick Key List?

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-11 21:31:56 UTC
From: John Harley
Topic: 5033 Message: 5033

I just rec'd the printable 396xt manual from Scannermasters and have a question. Love the manual, and I really like the quick key reference list on the very last page. Does anyone know of a template or how to make a smaller printable version of this list? I would really like to have the list about the size of a playing card and laminated and I'd like to hear some tips and suggestions from you folks as to how I can format such a template or where to download one? Thanks much!

John

PS - I did read somewhere that a few people had problems with the binding on this manual and that trying to scan the last page by bending it back etc. might damage the manual and I didn't want to chance that.

My area has four fire stations, and I wanted to be alerted for all of them. If I'm not sure how the scanner is set, I'll use the computer to find out. Another option, if this works, is to monitor the fire frequency in question on another radio. When they transmit, press "Hold" on the scanner. IF I hear what's being said, the scanner is on the right channel. IF you press "Hold" to monitor the transmission for a frequency you have set in tone-out standby mode, can you switch channels by turning the scroll control?
I have tone-out set to Search Quick Key "1." IF I want to use the Quick Key, instead of the menu, what's the procedure?
The manual states you hold on any channel, and press Function Followed by the key. Do I have to enable my Service Search Quick Key first?

OK. Alternate hint. Program those four in, then program them in again in the next 4 slots, then program the first two in the last two slots. The key factor is to have the frequency and mode the same on all channels. That way, you will always be looking at all the tone slots and it won't matter which one you are on.

BTW, the other menus have a double beep on the first item. This is not the case with the FTO slots, but if you're only interested in one frequency, it won't matter in your case. BTW, I did email Paul from Uniden and let him know about that missing double-beep.

Yes, your hold scheme will work fine.

The Search Key will do the same thing as setting the menu to the FTO mode. It will activate FTO mode on the last selected FTO slot. That's a really good feature for you since you won't have to remember menu items. You will have to be in HOLD mode before you use that feature.

I came into a 500' roll of LMR 400UF & replaced the hard to work with "750"
with the 400UF. Absolutely no difference in receive signal strength. I know
a guy (K2RIW) who runs 10 Gig equipment & he uses "750" hardline. He is a
consulting engineer for microwave installations. He gets the stuff for free
from the local cable company. I also got it for free, just went to the local
C/C and asked if the had any reel ends (stuff that's too short for them to
use). I got about 95 feet.
The 1.3 : 1 SWR number is also correct & insignificant in
scanner and Ham Radio applications. And if you think you scanner presents a
50 Ohm load across its entire receiving range.....I have something to
sell you that will make your SUV get 75 MPG..... :<))

Last summer when Comcast cable put a new cable "drop" in my back yard the guy said, "you want the rest of this=65', i said whats it equal to, he said to LMR400, i hooked it to my RS grnd-plane on the tower and its fantastiic on 700/800 for the ILL-Starcom...It just has a bunch of #'s on it and is about a half inch thick like LMR400....It will withstand any weather as they use it under-ground....

5044. Wanted USB-1 for programming Uniden Scanners (BCT15X and BCD996XT) - Have trade

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-16 11:36:21 UTC
From: kg4bvd
Topic: 5044 Message: 5044

Hello Gentlemen and ladies (I believe there are a couple in one of the groups),

I NEED the Uniden USB-1 programming cable, I had one, loaned it to a person I know (not exactly a friend), and they moved back to Berlin before making sure I got it back! I am not going to give a sob story, but, I am a disabled ham, BUT, I have an item that someone may want?

Back when I had 2 of each FT-60s and FT-8800s, I took 1 (one) programmer and attached BOTH cables to it (FT-60 and FT-8800) and it works! I do not have the software any longer, but I figure the dual-radio programmer is worth an even swap for a Uniden USB-1 (actually, if you bought the FT-60 and the FT-8800 programmers separate, it would cost about $47.00 as the FT-60 cable alone is about $22 most places, and the FT-8800 cable is about $25 most places, the USB-1 is only $31.95 so you will gain a value of about $15.05!

Thank you for your time folks, 73,
Walter Jinright - KG4BVD

P.s. If you wish to make the trade, just email kg4bvd@... please. I will also throw in a FREE Moto programming cable for the HT-1000 and similar radios (no RIB or software included) FOR a copy of BUTEL, and there are a couple "pins" where the cable connects to the radio that need a bit of work, because there was a little corrosion or something sticky on a few of them, and the genius that gave it to me tried to solder the pins (the ones that are supposed to spring back and compress some when connected to the radio, now some are stuck in the "in" position", I got a couple out, but I don't program Moto radios anymore, so I figured someone could use it and fix it up in an hour or less).

I'm having to get another case for the radio, a lighter weight one.

Any of you own either of these carrying cases?

One is available from Scanner Master. The keypad and display sections have separate clear plastic areas, however, the display is slightly cut off on the top.

Look here: http://www.scannermaster.com/Uniden_Nylon_Case_with_Belt_Loop_p/01-581011.htm

The second is available from Grove Enterprises. The keypad and display sections are not separate sections of plastic, rather it is one continuous piece. Also, looks like the speaker holes are a little high.

Look here: http://www.grove-ent.com/BCD396TCARRYCASE.html

So, if you have either of these for your radio, Let me know what you think, your experience with them.

Thanks,

-Lance

I had one with my first DMA scanner, the BC346T. It seemed to "move" a bit and cut off the top row a and display, but just a little bit and after wearing more than an hour or getting up/down several times, but just sitting on the bench or in the car cradle, it was ok the entire time I had it.

5056. Search, automatic store, and listen?

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-25 16:02:15 UTC
From: robdutka@comcast.net
Topic: 5056 Message: 5056

I've read the manual, and "mark's easy to read manual, and just can't figure this one out.

I want to be able to search, listen to a found frequency, and have it automatically store in a system. When the found frequency traffic stops, continue searching...

"Auto Search and Store" does not allow you to listen to radio traffic.

"Close call auto store" does not allow you to listen to radio traffic.

"Hits with scan" will store frequencies but you need to go through the "storing frequency" process.

There has to be a way, and it may be a combination of a few features, but I just can't figure it out. I just picked up my scanner about a week ago and am enjoying it all of its capabilities. So many features in such a compact package....awesome!

Any help appreciated.

Is the LMR 400 better than RG-8X for 800 mhz P25 systems ?

To: BCD396XT@yahoogroups.com
From: scanman1958@...
Date: Sat, 8 Jan 2011 18:28:53 -0800
Subject: Re: [BCD396XT] Re: Roof top antenna for bcd396xt

RG6 is 75 ohm and it is used quite often in receiving signals for scanners, etc. I am not sure about transmitting with 75 for a 50 set up so I can't say there. I know there isn't a perfect match there but it really does work pretty good.

75 Ohm coax for a 50 Ohm reciever? There is loss there too, you should
always match the Ohms as well.... and never use TV coax for scanner use.
Pre-amp or not. And even moreso, never EVER use TV Coax for amature radio
and transmitting! We went to one guys home once who was transmitting with
that ..... we had to put out the fire. The coax melted onto an electrical
line it crossed and well, the rest is history.... so was his home. His
comment "but it was only 25 to 50 watts..... doesn't matter, those cables
are NOT made for transmitting with ham gear at any wattage.
You have those two expensive radios you can afford to get PROPER coax.....
$40 to $50 for LMR-400 and that would eliminate the inline amp too!. Heck, I
just bought 100 ft of Times Micro LMR 400 for $69 plus $7.00 shipping.

Sent: Saturday, January 08, 2011 10:42 AM
Subject: RE: [BCD396XT] Re: Roof top antenna for bcd396xt

I use the Diamond discone which is a superb broad-band omni-directional
antenna. I use it with the BCD396XT, a Yaseu handheld, and my Kenwood TS2000
on 2 and 6 meters..

One caution --- when using any external antenna, the coax type and length is
critical at VHF and UHF Frequencies --- the higher you go; the greater the
loss per foot for any coax. My antenna is on a 30 foot pole and fed with 75
ohm ? inch hard line (former cable TV stuff which can be found pretty cheap)
plus a short 3 or 4 foot length of RG 8 to the radio. I also use a pre-amp

about a foot away from the radio receiver (of course, a pre-amp right at the antenna is much better, but since I use it for transmitting as well as receiving I couldn't easily accomplish putting it at the antenna.).

To put it in perspective approximate losses/100' for common coax are (divide by 100 to get loss/footJ)

150MHz 450MHz 900MHz

RG 58/U 6.2dB 10.6dB
16.5dB

RG 8X 4.7dB 8.6dB
12.8dB

RG213/214 2.8dB 5.2dB 8.0dB

As you can see the losses go up quickly. For an antenna with a 30 foot length of RG 58/U coax, the loss at 900MHz would be 4.95dB (very slightly less for 850MHz trunked systems and enough to negate much of the advantage of having the external antenna!)

Hope this is helpful.

Michael

My best antennas are the ChannelMaster Triband 5094A with LMR400, but they have been disc-, the "coax" really makes a antenna and LMR400 hears the ILL-700/800 Digital System on these great and other stations at great distance...I also use one on the tower and three in the attic of the RShack 25-1.3gig groundplane which is small and receives great....

I don't think that combination exists on the Uniden scanners.

Is the LMR 400 better than RG-8X for 800 mhz P25 systems ?

To: BCD396XT@yahoogroups.com

Subject: Re: [BCD396XT] Re: Roof top antenna for bcd396xt

RG6 is 75 ohm and it is used quite often in receiving signals for scanners, etc. I am not sure about transmitting with 75 for a 50 set up so I can't say there. I know there isn't a perfect match there but it really does work pretty good.

75 Ohm coax for a 50 Ohm reciever? There is loss there too, you should
always match the Ohms as well.... and never use TV coax for scanner use.
Pre-amp or not. And even moreso, never EVER use TV Coax for amature radio
and transmitting! We went to one guys home once who was transmitting with
that ..... we had to put out the fire. The coax melted onto an electrical
line it crossed and well, the rest is history.... so was his home. His
comment "but it was only 25 to 50 watts..... doesn't matter, those cables
are NOT made for transmitting with ham gear at any wattage.
You have those two expensive radios you can afford to get PROPER coax.....
$40 to $50 for LMR-400 and that would eliminate the inline amp too!. Heck, I
just bought 100 ft of Times Micro LMR 400 for $69 plus $7.00 shipping.

Sent: Saturday, January 08, 2011 10:42 AM
Subject: RE: [BCD396XT] Re: Roof top antenna for bcd396xt

I use the Diamond discone which is a superb broad-band omni-directional antenna. I use it with the BCD396XT, a Yaseu handheld, and my Kenwood TS2000 on 2 and 6 meters..

One caution --- when using any external antenna, the coax type and length is critical at VHF and UHF Frequencies --- the higher you go; the greater the loss per foot for any coax. My antenna is on a 30 foot pole and fed with 75 ohm ½ inch hard line (former cable TV stuff which can be found pretty cheap) plus a short 3 or 4 foot length of RG 8 to the radio. I also use a pre-amp about a foot away from the radio receiver (of course, a pre-amp right at the antenna is much better, but since I use it for transmitting as well as receiving I couldn't easily accomplish putting it at the antenna.).

To put it in perspective approximate losses/100' for common coax are (divide by 100 to get loss/footJ)

150MHz 450MHz 900MHz

RG 58/U 6.2dB 10.6dB
16.5dB

RG 8X 4.7dB 8.6dB
12.8dB

RG213/214 2.8dB 5.2dB 8.0dB

As you can see the losses go up quickly. For an antenna with a 30 foot length of RG 58/U coax, the loss at 900MHz would be 4.95dB (very slightly less for 850MHz trunked systems and enough to negate much of the advantage of having the external antenna!)

Hope this is helpful.

Michael

LMR-400 is WAY better than 8X, especially on the higher frequencies.
You might want to look at LMR-400UF, it has a stranded center instead of a solid copper core, it's MUCH easier to work with. Stick with the real stuff, made by Times Microwave.

73,
Bob

Absolutely. The rule of thumb is, the higher the frequency, the higher the loss for a given length of coax. And while 'thinness' isn't necessarily a factor, LMR-400 is much lower loss than 8x.

Generally speaking, the thinner the cable is the more loss it will have.
This is not an absolute, but it is true for many cable types.

LMR-400 is WAY better than 8X, especially on the higher frequencies.
You might want to look at LMR-400UF, it has a stranded center instead of a
solid copper core, it's MUCH easier to work with. Stick with the real stuff,
made by Times Microwave.

RG6 is 75 ohm and it is used quite often in receiving signals for scanners,
etc. I am not sure about transmitting with 75 for a 50 set up so I can't say
there. I know there isn't a perfect match there but it really does work
pretty good.

75 Ohm coax for a 50 Ohm reciever? There is loss there too, you should
always match the Ohms as well.... and never use TV coax for scanner use.
Pre-amp or not. And even moreso, never EVER use TV Coax for amature radio
and transmitting! We went to one guys home once who was transmitting with
that ..... we had to put out the fire. The coax melted onto an electrical

line it crossed and well, the rest is history.... so was his home. His comment "but it was only 25 to 50 watts..... doesn't matter, those cables are NOT made for transmitting with ham gear at any wattage.
You have those two expensive radios you can afford to get PROPER coax..... $40 to $50 for LMR-400 and that would eliminate the inline amp too!. Heck, I just bought 100 ft of Times Micro LMR 400 for $69 plus $7.00 shipping.

Sent: Saturday, January 08, 2011 10:42 AM
Subject: RE: [BCD396XT] Re: Roof top antenna for bcd396xt

I use the Diamond discone which is a superb broad-band omni-directional antenna. I use it with the BCD396XT, a Yaseu handheld, and my Kenwood TS2000 on 2 and 6 meters..

One caution --- when using any external antenna, the coax type and length is critical at VHF and UHF Frequencies --- the higher you go; the greater the loss per foot for any coax. My antenna is on a 30 foot pole and fed with 75 ohm ? inch hard line (former cable TV stuff which can be found pretty cheap) plus a short 3 or 4 foot length of RG 8 to the radio. I also use a pre-amp about a foot away from the radio receiver (of course, a pre-amp right at the antenna is much better, but since I use it for transmitting as well as receiving I couldn't easily accomplish putting it at the antenna.).

To put it in perspective approximate losses/100' for common coax are (divide by 100 to get loss/footJ)

150MHz 450MHz 900MHz

RG 58/U 6.2dB 10.6dB
16.5dB

RG 8X 4.7dB 8.6dB
12.8dB

RG213/214 2.8dB 5.2dB 8.0dB

As you can see the losses go up quickly. For an antenna with a 30 foot length of RG 58/U coax, the loss at 900MHz would be 4.95dB (very slightly less for 850MHz trunked systems and enough to negate much of the advantage of having the external antenna!)

Hope this is helpful.

Michael

From: Ken Howard
Topic: 5056 Message: 5064

You can store found conventional frequencies in "Search" mode - but not automatically. Set the search lower and upper limts, begin searching and when stopped on a frequency that you are listening to follow below to "store" which frequencies you want to keep. Next press "Hold" again or turn VFO knob to resume searching;

page 154 of the 396XT Uniden Complete Reference.

Quick SavePress [E / yes / gps] without entering data to quickly store the held frequency.
This Quick Save function is almost the same as Direct Entry.

Subject: [BCD396XT] Search, automatic store, and listen?

I've read the manual, and "mark's easy to read manual, and just can't figure this one out.

I want to be able to search, listen to a found frequency, and have it automatically store in a system. When the found frequency traffic stops, continue searching...

"Auto Search and Store" does not allow you to listen to radio traffic.

"Close call auto store" does not allow you to listen to radio traffic.

"Hits with scan" will store frequencies but you need to go through the "storing frequency" process.

There has to be a way, and it may be a combination of a few features, but I just can't figure it out. I just picked up my scanner about a week ago and am enjoying it all of its capabilities. So many features in such a compact package....awesome!

Any help appreciated.

Rob,

You may already have read this, but for reference, once you quick store your freqs you found while searching,

they are stored in Qck Save Cnv Sys in the list of programmed systems...

It is an awesome radio and continues to be from here. I programmed the input freq. to Caltrans and set the display to turn

Magenta, and give me a specific alert tone so I know it was an input that I had been wanting to verify for awhile. It lit while

traveling down the fwy. today. Bingo!

Very helpful...

Have fun with the radio!

I'd like to know if someone could pull the stats to compare a 75' run of
quad-shielded RG6 vs LMR400 or Commscope 3327 on 150, 450 and 850 Mhz.

5076. Direct freq entry - no saving

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-26 22:20:38 UTC
From: Richard Yoo
Topic: 5076 Message: 5076

Does anyone know how to just directly key in a freq (like 146.520) and listen to it? A quick glance and the manual doesn't make this obivous to me.

I tried putting the scanner on HOLD then typing in the freq - but after hitting E it tries to save it... I just want to tune to it and listen...

Any ideas?

Thanks!

-Richard, N5YOO

You're 92% there. Instead of hitting the E key after the frequency,
press the HOLD button again.

HOLD 1 4 6 . 5 2 0 HOLD

A Tip,
Go the Uniden web site, find Manuals and download the manual for the
BCD396T, many of the
features are the same and it's better than the wiki for the XT.

RG6 is 75 ohm and it is used quite often in receiving signals for scanners, etc. I am not sure about transmitting with 75 for a 50 set up so I can't say there. I know there isn't a perfect match there but it really does work pretty good.

75 Ohm coax for a 50 Ohm reciever? There is loss there too, you should always match the Ohms as well.... and never use TV coax for scanner use. Pre-amp or not. And even moreso, never EVER use TV Coax for amature radio and transmitting! We went to one guys home once who was transmitting with that ..... we had to put out the fire. The coax melted onto an electrical line it crossed and well, the rest is history.... so was his home. His comment "but it was only 25 to 50 watts..... doesn't matter, those cables are NOT made for transmitting with ham gear at any wattage.
You have those two expensive radios you can afford to get PROPER coax..... $40 to $50 for LMR-400 and that would eliminate the inline amp too!. Heck, I

just bought 100 ft of Times Micro LMR 400 for $69 plus $7.00 shipping.

John

Sent: Saturday, January 08, 2011 10:42 AM
Subject: RE: [BCD396XT] Re: Roof top antenna for bcd396xt

I use the Diamond discone which is a superb broad-band omni-directional antenna. I use it with the BCD396XT, a Yaseu handheld, and my Kenwood TS2000 on 2 and 6 meters..

One caution --- when using any external antenna, the coax type and length is critical at VHF and UHF Frequencies --- the higher you go; the greater the loss per foot for any coax. My antenna is on a 30 foot pole and fed with 75 ohm ½ inch hard line (former cable TV stuff which can be found pretty cheap) plus a short 3 or 4 foot length of RG 8 to the radio. I also use a pre-amp about a foot away from the radio receiver (of course, a pre-amp right at the antenna is much better, but since I use it for transmitting as well as receiving I couldn't easily accomplish putting it at the antenna.).

To put it in perspective approximate losses/100' for common coax are (divide by 100 to get loss/footJ)

150MHz 450MHz 900MHz

RG 58/U 6.2dB 10.6dB
16.5dB

RG 8X 4.7dB 8.6dB
12.8dB

RG213/214 2.8dB 5.2dB 8.0dB

As you can see the losses go up quickly. For an antenna with a 30 foot length of RG 58/U coax, the loss at 900MHz would be 4.95dB (very slightly less for 850MHz trunked systems and enough to negate much of the advantage of having the external antenna!)

Hope this is helpful.

Michael

My best antennas are the ChannelMaster Triband 5094A with LMR400, but they have been disc-, the "coax" really makes a antenna and LMR400 hears the ILL-700/800 Digital System on these great and other stations at great distance...I also use one on the tower and three in the attic of the RShack 25-1.3gig groundplane which is small and receives great....

I think Scanner Master has some pucks that work well with the GPS scanners. All you do is supply them 12V and connect them to your scanner via a null modem adapter and put them on the roof or dashboard.

I've used ones by Delua and Byonics. I think I'm missing a letter from Delua, but I'm not sure. Those ones may not be made anymore anyway.

You'll need one that outputs serial directly and there aren't a huge number of those units around any more. Most all of the new ones are USB only.

I don't know if others have experience with it but i think the garmin GPS18x devices could be a real good match for this scanner (And possibly APRS use etc)

https://buy.garmin.com/shop/shop.do?cID=158&pID=27594

I'm also pretty sure almost all of these would work for you:
http://www.eham.net/reviews/products/77

Or here:
http://www.byonics.com/tinytrak/gps.php

I use a Garmin 60CSx, any of the garmins in that 60-series puts out serial you can use with the scanner.

I use mine with a custom cable i made up for my APRS rig in my car and it works great, i haven't used it with my scanner but the principle is the same. i'm fairly certain it would work fine.

Someone else might be better to comment about the Home Patrol system but my understanding is that by using a GPS device with the [3,9]96x[t] devices it will auto enable and disable systems local to your known GPS coordinates which is probably what you're looking to do?

The Home Patrol system is able to do that and also a bunch more having to do with how you manage the systems etc...

At one point i was going to put my scanner in the car and use one of those GPS18x devices to feed it coordinates. I don't really drive very much so i deprioritized the project

Good luck with it.

Not wanting to be tied down to a 12v power supply for the Garmin puck GPS units I went searching for something different. The Garmin eTrexR H Part Number: 010-00631-00 is the only eTrex unit that has the serial output. Garmin states the unit will run up to 17 hrs with two AA batteries and although I have not measured the time, it will give at least 8 hours for sure. I think WalMart carries this unit and also a number of GPS online stores carry it also. You will also need the serial cable for the eTrex which I wound up ordering online. Make sure it's for the serial output since the rest of the eTrex units are usb. Then I used a null modem adapter to connect the eTrex cable to the Uniden cable and all was good. I think I got mine from Radio Shack but don't remember anymore. I had several of the null modem adapters around the house from days gone by.

Since Uniden and Garmin think you need a half mile of cable for their units I coiled the excess cable and tied with a ty-rap and stuffed into a sock. Velcro will also work good to keep the wires together and the sock makes it all look a little neater. Best use a clean sock though and stuff it in your back pocket for a holder. I let the GPS unit hang out a bit so I can turn it on and off and that's it. Gives me total mobility with a pocket size unit.

I have a Garmin GPS puck in the car for the mobile radios and they will also work on the 396XT, just need a constant 12 v power to run them and again, a null modem adapter.

5087. Direct Entry to Quick Search - no P25

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-01-28 20:56:20 UTC
From: Jim R
Topic: 5087 Message: 5087

Hi,
I am sure I must be doing something wrong. I am hearing a p25 signal on a frequency programed into a the conventional system. However if I direct enter the same freq <hold>155.7300<hold>, I hear the digital packets (p25) but they don't decode as audio.

Am I doing something wrong, do I need to select something, is this possible to do ? I have tried various searches on the net and this group and I don't find anything that explains this.

Thanks
Jim

Make sure CTCSS/DCS Search is turned off (that would force all reception to analog).

Why stop at 1-7/8"? Heliax is made in much larger diameters that have
even lower loss. :-)

Set your search options to disable CTCSS/CDCSS decoding.

When the scanner is set for that, it cannot decode P25.

From: robdutka@comcast.net
Topic: 5052 Message: 5091

I have the one from ScannerMaster.

Pros:

Very durable material.

Nice quality stitching.

Snug fit around scanner.

Secure snap closure for belt attachment.

Side openings for Menu/function button, flap for remote, and power connection

Cons:

Does not cover the top of scanner with fold over flap.

Top plastic window slightly covers clear window on scanner, but does not cover top line of LCD.

Must remove to access battery cover.

The Cons may not be Cons for some as they can be a personal preference.

Overall, I like the case and would recommend it and would buy it again.

Subject: [BCD396XT] Have any experience with...

I'm having to get another case for the radio, a lighter weight one.

Any of you own either of these carrying cases?

One is available from Scanner Master. The keypad and display sections have separate clear plastic areas, however, the display is slightly cut off on the top.

Look here: http://www.scannermaster.com/Uniden_Nylon_Case_with_Belt_Loop_p/01-581011.htm

The second is available from Grove Enterprises. The keypad and display sections are not separate sections of plastic, rather it is one continuous piece. Also, looks like the speaker holes are a little high.

Look here: http://www.grove-ent.com/BCD396TCARRYCASE.html

So, if you have either of these for your radio, Let me know what you think, your experience with them.

Thanks,

-Lance

If money is no object, can't I just go and file a freedom of information request for the taped audio from the radio console every day?

5101. RE: [BCD396XT] Indoor Antenna

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-02-01 01:14:54 UTC
From: W4KRR
Topic: 5099 Message: 5101

Short answer: It depends. In some cases it will make a big difference, in other cases less so, in some cases the signal may be worse. There are a lot of factors to consider: the frequencies you are trying to receive, the distance between you and their transmitting antenna, your elevation, the type of antenna you are using, the length and type of the coax cable, etc.

The times I have tried a mag mount antenna on the fridge or a filing cabinet, I have found that in my area, some signals are improved, but some, especially 800MHz trunked systems, seem to be no better or even a little worse than using the supplied antenna. This is in part due to any additional signal that the antenna may provide being lost in the coax cable between the antenna and the scanner.

Bottom line, you are just going to have to try it for yourself and see. If it doesn't work out, you can always sell the antenna on eBay!

Another idea.... I used a magnetic mount to the ceiling air duct right in front of the window and have the antenna hang upside down. Looks funny, but it works.

I'm not a RF guy so this might not be the best solution, but it works better than the small antenna on the scanner.

Here;s the antenna I use in my condo Available at scanner master:

WAN-97A Active Nomad Base Antenna

MSRP: $99.95
Our Price: $89.95
You Save: $10.00

Great indoor antenna for Apartment or condo living... Designed for VHF
and UHF reception, the 4 foot long vertical antenna element rolls up for
easy storage. At the base is a matching section followed by 10 feet
coax lead terminated in control box and ending in BNC plug. For outdoor
use additional waterproofing is necessary - details given. The coaxial
lead may also easily be extended for outside operation. The matching box
is powered by internal PP3 (not supplied) or external 12V.

Another idea.... I used a magnetic mount to the ceiling air duct right in front of the window and have the antenna hang upside down. Looks funny, but it works.

I'm not a RF guy so this might not be the best solution, but it works better than the small antenna on the scanner.

If you listenin to fire and police dispatch channels that are repeater based, then its not going to matter. But if you want to hear simplex, tactical coms, well then, you want a better
ear of an antenna...

Scanner Master has a few log periodics one of them is 4 grand! Put that on a tall tower and some LMR 800 and a rotor. Not braging but I have a CLP-5130 log now but not using it right now. Right now I am using a Icom discone that is up about 50 feet on my tower. But if I was to ever hit the lottery O MY MY!!

Why not ?? should work fine for most local stuff, but any signals coming in from a higher angle could be significantly reduced (air traffic, for example) because the antenna's major radiating (and receiving) pattern will be slightly below the horizon and your air duct would block some of that. Most aircraft have antennas mounted on the bottom of the fuselage so they radiate best down and out; antennas at the airfield and other locations have them pointed up so the radiation is up and away.

Hope that helps. --- (Can you get the antenna on TOP of the ceiling someplace??)

Sometimes what you think might be a great place for a scanner and antenna isn't such a good thing.

I had a small airplane for a while (Piper Warrior II) and from a few thousand feet in the air it was useful for listening to some specific frequencies of interest but on many frequencies you can TOO MUCH! On common frequencies you hear multiple services all talking at the same time, multiple 2 meter ham repeaters on the same frequency. 155.34 – EMT's to hospitals – sounds like the old CB band. I tried listening to the local Police in the 155MHz band but was hearing several others that I couldn't identify.

It was fun to do but in the end I used it a lot to listen to the Marine band along the New England coast, some amateur simplex frequencies and I used it as an auxiliary receiver for some aircraft frequencies.

Michael – K1VLB

Yeah, but transmitting and receiving patterns are typically reciprocal --- a directional transmitting antenna will also be a directional receiving antenna…. Some metal in the way of a transmitting signal is also in the way with a signal coming in to be received…

From: Lance Star
Topic: 5099 Message: 5113

If that was the case then I would not be able to recieve signals from a yagi antenna using a omni-directional antenna...

In the same light, a Southwest Jet flying at Flight Level 430 transmitting from the lower dorsal fin antenna to my handheld with a
vertically upright oriented antenna would not recieve signals based on theory of reciprocal...

I think for this person he needs more surface area to recieve signals if "line of site" , "point to point" simplex coms is what he is interested in.

If he was just listening to police/fire/ambulance dispatch that would not take much of an antenna with repeater TX power being 50-100 watts
not to mention the ERP when one adds the gain of the antenna. In some cases that could be up around 12 dB or more.

I can recieve San Francisco PS Trunk System with a bnc stub antenna (about 1/4") long, used for Indy Races as an example.

At least our friend has a frige to act as a groundplane. Although Mag mount antennas are capacitively coupled...

5115. Re: Indoor Antenna

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-02-02 15:20:32 UTC
From: Alex
Topic: 5099 Message: 5115

No antenna (except for a dish and not quite that even) is perfectly directional. There are lobes all around every type of antenna including a Yagi-Uda, log periodic or any other form of multi-element antenna. The key factor is that the gain of the antenna is focused in one direction if it's a directed antenna (such as a Yagi) and uniform if it's some type of vertical antenna. Directed gain does not preclude you receiving signals from one type of antenna to another, it just determines how much signal you get. The radiation pattern of the antenna is not determined by transmit or receive but its construction so the statement that it is reciprocal is accurate. The gain envelope will be the same no matter what purpose the antenna is used. The total gain envelope of the antenna is constant it's just where all that gain is pointed. A Yagi has a lot of gain in one direction and not much in most others while an omni has a little gain in all directions.

In the case of the plane, the dorsal antenna is not a Yagi, it's a short vertical antenna (not quite omni). The fuselage of the plane is actually causing a reflection, too, so that the main gain lobes of the antenna aren't pointing at the horizon anymore, they are actually tilted away from the fuselage by a small amount (at most frequencies it works out to about a 15 degree tilt). There is signal still spilling out in various other directions but the vast majority of the signal is pointed in the general direction of the ground but uniformly. There's no sense wasting transmit power by sending it skyward where there aren't any airports to listen.

Believe it or not, your vertical antenna is not completely omnidirectional. It's actually mostly directional out the side of the antenna perpendicular to its axis . The gain pattern of a vertical antenna is approximately a torus (a donut). There is a bit of signal leakage along the axis of the antenna but not much. This is approximately the same pattern as the antenna on the plane. However, the torus is pretty thick on a stubby antenna like that used on a handheld scanner so there's a lot of skyward and groundward gain lobe, too. That makes it *nearly* omnidirectional but not quite. This is a feature of verticals sometimes used to do signal tracking if you can't get a Yagi.

As it was always said in my RF engineering classes, antennas are a black art. Something will work in one place and doesn't in another due to very complex interactions. There's a reason that companies like Sonnet and others sell RF modeling software for thousands of dollars because it's not easy to predict everything.

Antennas have key features that help. The size of the antenna determines it's signal cross section (or electrical cross section for some modified versions). You want as much cross section as possible to pick up all the signal you can. This works in the reciprocal, too, because you want a large antenna for large transmit signal, too. Stubby antennas use coiled wire to achieve more electrical length for less physical length. This does work to some extent though there's a slight efficiency/gain penalty for doing so. Height determines range which is also influenced by the gain pattern. You can have all the height you want but if the signal of interest is inside a low-gain lobe of the antenna, it won't help as much. Directionality has already been discussed but the basic idea is to have all the gain possible in the direction of the signals of interest. For most scanning, an omni is the required choice because the signals are coming from everywhere. However, if I were out at

sea wanting to listen to all the signals on the coastal city, I would choose a Yagi or a dish antenna instead otherwise I waste my antenna gain with an omni.

What is the name or designation for "hard line ?" Is LMR-600 the same as "hard line ?"
I was asking because I saw some at construction project - specifically an air traffic control tower - and I think they are using LMR-600 for coax.
I suspect its some really good stuff.

Subject: Re: [BCD396XT] Re: Roof top antenna for bcd396xt

LMR-400 is WAY better than 8X, especially on the higher frequencies.
You might want to look at LMR-400UF, it has a stranded center instead of a solid copper core, it's MUCH easier to work with. Stick with the real stuff, made by Times Microwave.

Subject: Re: [BCD396XT] Re: Roof top antenna for bcd396xt

RG6 is 75 ohm and it is used quite often in receiving signals for scanners, etc. I am not sure about transmitting with 75 for a 50 set up so I can't say there. I know there isn't a perfect match there but it really does work pretty good.

75 Ohm coax for a 50 Ohm reciever? There is loss there too, you should always match the Ohms as well.... and never use TV coax for scanner use.

Pre-amp or not. And even moreso, never EVER use TV Coax for amature radio and transmitting! We went to one guys home once who was transmitting with that ..... we had to put out the fire. The coax melted onto an electrical line it crossed and well, the rest is history.... so was his home. His comment "but it was only 25 to 50 watts..... doesn't matter, those cables are NOT made for transmitting with ham gear at any wattage.
You have those two expensive radios you can afford to get PROPER coax..... $40 to $50 for LMR-400 and that would eliminate the inline amp too!. Heck, I just bought 100 ft of Times Micro LMR 400 for $69 plus $7.00 shipping.

John

Sent: Saturday, January 08, 2011 10:42 AM
Subject: RE: [BCD396XT] Re: Roof top antenna for bcd396xt

I use the Diamond discone which is a superb broad-band omni-directional antenna. I use it with the BCD396XT, a Yaseu handheld, and my Kenwood TS2000 on 2 and 6 meters..

One caution --- when using any external antenna, the coax type and length is critical at VHF and UHF Frequencies --- the higher you go; the greater the loss per foot for any coax. My antenna is on a 30 foot pole and fed with 75 ohm ? inch hard line (former cable TV stuff which can be found pretty cheap) plus a short 3 or 4 foot length of RG 8 to the radio. I also use a pre-amp about a foot away from the radio receiver (of course, a pre-amp right at the antenna is much better, but since I use it for transmitting as well as receiving I couldn't easily accomplish putting it at the antenna.).

To put it in perspective approximate losses/100' for common coax are (divide by 100 to get loss/footJ)

150MHz 450MHz 900MHz

RG 58/U 6.2dB 10.6dB
16.5dB

RG 8X 4.7dB 8.6dB
12.8dB

RG213/214 2.8dB 5.2dB 8.0dB

As you can see the losses go up quickly. For an antenna with a 30 foot length of RG 58/U coax, the loss at 900MHz would be 4.95dB (very slightly less for 850MHz trunked systems and enough to negate much of the advantage of having the external antenna!)

Hope this is helpful.

Michael

My best antennas are the ChannelMaster Triband 5094A with LMR400, but they have been disc-, the "coax" really makes a antenna and LMR400 hears the ILL-700/800 Digital System on these great and other stations at great distance...I also use one on the tower and three in the attic of the RShack 25-1.3gig groundplane which is small and receives great....

At 03:01 PM 2/2/2011, Les Shew wrote:

>What is the name or designation for "hard line ?"

Andrew Heliax is a common brand name for hardline. And it's not really hard because the shield is a corrugated copper tube so it has some flexibility.

The cable TV hardline (75 ohm) that I've seen had a smooth aluminum shield and was very stiff, however it would bend enough to be rolled up on large spools.

> Is LMR-600 the same as "hard line ?"

No. LMR-600 is a low-loss braided-shield coax marketed by Times Microwave. It has a nominal diameter of 0.590 inches...hence, the "600" designation. It's also available in other sizes from 0.110 inches to 1.670 inches. LMR-400 is a common upgrade from RG8 and is roughly the same diameter as RG8.

How is antenna's and coax off topic? Last I heard both are required (depending on setup regarding coax) for scanners to hear what you want to hear. So it would seem to be very on topic.

From: David Klippel
Topic: 4986 Message: 5122

I think he was meaning that this group is supposed to be focused to 396XT issues not generic scanners topics at length that are better covered in other groups like the newscannerantenna group that was suggested. I tend to agree. The thread on antenna suggestions is getting long and off topic from the 386XT focus which is what I why I originally signed up. The brief tangent is ok but the antenna and coax discussion has been been the majority of the traffic here for a month or so..Though at a low level it is interesting it is becoming off topic noise and degrading the intended focus of the group.

This is just my view, all two cents of it, and it is the moderator that has the control of discussion so I could off base. I think Clark's response appropriate and John's follow up with the group name helpful.

5123. Rebanding Frequencies

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-02-06 17:30:50 UTC
From: John Harley
Topic: 5123 Message: 5123

In my area, Montgomery County, Ohio, the TRS page on Radio Ref gives a few frequencies off the grid that are rebanding control channels. Still learning trunk systems, and I was wondering - do I add these frequencies now?

FYI, I am really new to trunking and just learning how these systems operate. Add to that, I am an ol' ham with a new-fangled radio trying to learn new tricks haha. Any information would be most appreciated:)

John

You don't need the new rebanded frequencies until the old ones stop working.
Once they reband, you will have to add the new control channel frequencies
and (possibly) enter a custom bandplan.

Ken

5125. [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-02-07 06:58:05 UTC
From: Walter
Topic: 5123 Message: 5125

Hello Gentlemen,
I am looking for the 2 serials for ARC396Pro V 3.2.004 Pro - and ARCXTPro V 1.5 Build 4, (Both take 2 "serials" actually "keys" , Key 1 and Key 2). Please read before judging me; I have already bought both programs, even just got a new USB-1 cable for the BCD396T / BCT15X / BCD996XT and a couple others....
I loaned the ONLY Notebook PC (with the ONLY copy of the serials, on that notebook pc), to a friend who's house just burned down. I was told I could get my serials back, but it could take some time and I am trying to program a couple scanners for a local neighborhood watch "Captain", he is disabled and the scanners were donated to him.
I just need to enter the serials, program the scanner, then will delete the programs until I can get my serial back.

I need to program the scanners tonight or by 9:45 AM Monday! I have ALL of the data to be uploaded or "sent" to the scanners in CSV format (from my own scanners that I have programmed), I also have the saved system(s) files in the format the 2 respective softwares save the data as, I MUST program them ASAP though. I have been awake 30+ hours now manually programming and trying to "clone" them from my scanners, but the firmware versions are different I think, or I just can't get them to clone directly from scanner to scanner?

I appreciate any help.... I am at wits end here. I promise I DO HAVE my own serial "floating" somewhere at BuTeL, but I need to program these scanners, just too soon to wait for copies of my 4 keys, 2 x 2 keys.

Any/All help is GREATLY Appreciated!

Walter

Hi Walter,

How about using FreeScan instead? It's just as good or better than the Butel ARC and best of all it is FREE.

http://www.scannow.org/

Cheers,

dwC

1. You need to contact Butel about this to get replacement keys.

2. Butel has a demo mode, so it will work for a period of time if you
install it on a different PC. You don't need the keys for this.

I posted this in another group, so I will here also:
For some reason, FreeScan AND Proscan can WILL NOT work on my PC for some reason!?!?!? I used to use it and deleted it a year ago (like an idiot!), and the new version just loads on my desktop, freezes, and stops responding and caused the mouse cursor to "freak out" or flicker rapidly and then I get the BSOD (Blue Screen of Death (I am open to suggestions as to why that is, I am using Win Vista Home Basic, the OLD Longhorn version that is really full of bugs still). I would be grateful if someone could provide me with an older copy of FreeScan, the version 1.X.X worked FINE on this PC, but not 2.05 it is the glitchy one. My cursor blinks so fast when I "mouse over" V 2.05, that I can not even "click" on anything! Same with ProScan (30 day trial ware).
I was going to get a notebook from a friend this morning that has ARC396Pro v 3.2.004 and ARCXTPro v 1.5 Build 4 (which are the only one's that seem to work for me on my PC *desktop* and the USB-1 cable [yeah, I finally got one], I would appreciate any help on those keys if someone can help. I need to program TODAY by 1000 - 1030 HRS Central time. I promise if someone can provide them for a temp. basis, I WILL delete them when done, I will have mine back in a few weeks, my friend borrowed it and is about 200 miles away!

Thanks for the advice though, but I am already aware of all of the other software,
Walter

To Don and Jeffry,
Actually to ask is NOT illegal, and further more, who put you two, (The group Nazi's) in charge to judge me anyway, why don't you cast the first stone??? I know, because you are a hypocrite!!!
If you don't like it or think it is fishy, then mind your own damn business! BY THE WAY, I RECOVERED MY KEYS!!! So I say butt out and mind you business, for all we know, you probably do worse acts when you think no one is looking!!!
You don't know me, and if was anyone else on this group, I would have helped them! As a matter of fact, I see MANY "regulars" of this group, in the radioprogramming group always asking for $600+ Moto software??? So where is the difference other than you had a bad day and came to this group to take it out on me???
So, if you are not one to help, just keep your "mouth" (keyboard) shut!!! Funny how you people are so tough behind a computer screen, I'd like you to give me attitude like that in real life, all 6'5" / 270 pounds of me ;-)
So if you can't help (like I ask for, because I was having trouble with freescan), just but out and no comments from the peanut gallery!

So I would like to thank those, one in particular (you know who you are), that gave me the contact info to recover my keys for both programs.

And for the trolls, Jeffrey and Don, get off your high-horse!

Walter

Subject: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Hello Gentlemen,
I am looking for the 2 serials for ARC396Pro V 3.2.004 Pro - and ARCXTPro V 1.5
Build 4, (Both take 2 "serials" actually "keys" , Key 1 and Key 2). Please read
before judging me;
I have already bought both programs, even just got a new USB-1 cable for the BCD396T / BCT15X / BCD996XT and a couple others....
I loaned the ONLY Notebook PC (with the ONLY copy of the serials, on that notebook
pc), to a friend who's house just burned down. I was told I could get my serials
back, but it could take some time and I am trying to program a couple scanners for
a local neighborhood watch "Captain", he is disabled and the scanners were donated
to him.
I just need to enter the serials, program the scanner, then will delete the programs until I can get my serial back.

I need to program the scanners tonight or by 9:45 AM Monday! I have ALL of the data
to be uploaded or "sent" to the scanners in CSV format (from my own scanners that I
have programmed), I also have the saved system(s) files in the format the 2 respective softwares save the data as, I MUST program them ASAP though. I have been
awake 30+ hours now manually programming and trying to "clone" them from my scanners, but the firmware versions are different I think, or I just can't get them
to clone directly from scanner to scanner?

I appreciate any help.... I am at wits end here. I promise I DO HAVE my own serial
"floating" somewhere at BuTeL, but I need to program these scanners, just too soon
to wait for copies of my 4 keys, 2 x 2 keys.

Any/All help is GREATLY Appreciated!

Walter

5134. Close Call Question...

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-02-07 22:19:43 UTC
From: Lance Star
Topic: 5134 Message: 5134

Is there a way to set Close Call so that when it captures a new freq. it will just display it without telling me "press any key" or "press fuction key"

I want to bypass this intermediate step and just have the radio display the frequency it just captured.

Thanks group.

5135. Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Yahoo group: BCD396XT (2011 — 2014)

From: Don Curtis
Topic: 5123 Message: 5135

Actually, it IS illegal. Soliciting to do an illegal activity is just as illegal as doing the activity.

And you're right...I don't know you, nor do I care to. With that in mind, you could be the best guy in the world or the worst, so I have no idea if you would or wouldn't remove the keys and software.

And if people are asking for $600+ software...they too are wrong. It's NOT the $$ amount that matters, it's the wanting something for nothing.

Butel software HAS a process to give you keys. Their software DOES work in demo mode for a time limited period. If you had thought, instead of acted like a thief, maybe people like Jeffry and I wouldn't mistake you for one.

So you can take your opinion of me and put it where the sun don't shine....makes no difference to me at all, one way or the other what you think.

EXCUSE ME! You are the guilty one, you didn't read the entire thread! I said I HAVE THE KEYS AND HAVE GONE THROUGH THE PROCESS (It takes a little time to recover it), So I asked to BORROW someone's for a few minutes as I was at a critical point!
You would have seen that I loaned my notebook pc to a friend (that had ALL my scanner programs and RSS on it), to a friend, his house burned a couple weeks ago and my notebook was in his house! Look all the way down on this thread (this very email), and you will see that!!!
So I have paid for the software, and have since downloaded it again and recovered my keys, I was not nor was I acting like a thief!
The only law broken is called cyber bullying (a real crime), and you are the one breaking that law Mr. Radio Nazi, what should I do now Mein Führer, give you the Hitler salute!?!?!?
I am well aware that sharing software and/or keys, serial, flash codes, RSS, etc... is piracy, but the company that makes any given software should be the one to say something to me, if they were so worried, they would have already joined this group and gave me the tongue lashing you took upon yourself to give me!
So if you don't have anything nice to say, keep your trap SHUT! You could have simply said, "that would not be legal / moral for me to share that information with you" and I would have left it at that (which I did anyway, since I got my keys (recovered). But no, there always has to be that one troll that stirs everyone up or bullies people in the groups, and that is you in this group.
So if you know what is good for you, it would be wise who you call a thief, and who you bully, because I can give you about 4 or 5 dozen names of people here locally, that would tell you, "If you lived here in my area, you would drinks your meals for 6 months!
So if you want to keep on giving me crap and slandering me, go ahead, but, don't say you were not warned!

5138. Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-02-08 02:41:13 UTC
From: Matthew Kurzon
Topic: 5123 Message: 5138

I just read this thread, having sent all 396XT emails into a folder of its own just
before this happened.

Perhaps I can provide some perspective at this point, not being on anyone's side.

It is natural for Walter's request to "appear" suspicious- because 999,999/1,000,000
this type of request is BS.

How could you know that in this case it was GENUINE?

A couple of clues: 1- It is in this group. 2- Walter's email address is @...,
which could indicate a good internet provider in his area, possibly even his employer-
admittedly, possibly meaningless. The first clue, plus his focus and no misspellings...
ok, maybe it's not much, but he wasn't asking for something random. He just wanted
to program his radio.

On the other side: Walter has brought up the subject of bullying. He is guilty of at least
twice making violent threats in addition to name calling (Nazis ++) which eliminates him

as a person who can call others "cyber bullyers". He is one himself, without any doubt.

Walter did prove his GENUINENESS by stating that he obtained the keys himself.

Everyone else was just reacting GENUINELY because in 999,999/1,000,000 cases
people are FRAUDS on the internet.

However, in this case, how many FRAUDS would want the keys to program a BCD396XT?

Walter was jumped on fast, instead of offered assistance. The story did sound fraudulent,
after we are bombarded with thousands like it. It is all too easy to look back and see that
it was not a fraud. In looking back my question is: would two installations of the software
nullify both of them?

Sometimes giving help is not so easy. I want to pick up wreckage material in the middle of
the highway even at night. But if I try, I could easily be killed. This is not nearly as risky,

but you see there is even a question about what could happen to both installations.

Additionally, Walter, it was not a true emergency. Getting your own installation keys is
something that you could do for yourself, with only a short delay.

Matthew

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

EXCUSE ME! You are the guilty one, you didn't read the entire thread! I said I HAVE THE KEYS AND HAVE GONE THROUGH THE PROCESS (It takes a little time to recover it), So I asked to BORROW someone's for a few minutes as I was at a critical point!

You would have seen that I loaned my notebook pc to a friend (that had ALL my scanner programs and RSS on it), to a friend, his house burned a couple weeks ago and my notebook was in his house! Look all the way down on this thread (this very email), and you will see that!!!
So I have paid for the software, and have since downloaded it again and recovered my keys, I was not nor was I acting like a thief!

The only law broken is called cyber bullying (a real crime), and you are the one breaking that law Mr. Radio Nazi, what should I do now Mein Führer, give you the Hitler salute!?!?!?
I am well aware that sharing software and/or keys, serial, flash codes, RSS, etc... is piracy, but the company that makes any given software should be the one to say something to me, if they were so worried, they would have already joined this group and gave me the tongue lashing you took upon yourself to give me!
So if you don't have anything nice to say, keep your trap SHUT! You could have simply said, "that would not be legal / moral for me to share that information with you" and I would have left it at that (which I did anyway, since I got my keys (recovered). But no, there always has to be that one troll that stirs everyone up or bullies people in the groups, and that is you in this group.
So if you know what is good for you, it would be wise who you call a thief, and who you bully, because I can give you about 4 or 5 dozen names of people here locally, that would tell you, "If you lived here in my area, you would drinks your meals for 6 months!
So if you want to keep on giving me crap and slandering me, go ahead, but, don't say you were not warned!

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Actually, it IS illegal. Soliciting to do an illegal activity is just as illegal as doing the activity.

And you're right...I don't know you, nor do I care to. With that in mind, you could be the best guy in the world or the worst, so I have no idea if you would or wouldn't remove the keys and software.

And if people are asking for $600+ software...they too are wrong. It's NOT the $$ amount that matters, it's the wanting something for nothing.

Butel software HAS a process to give you keys. Their software DOES work in demo mode for a time limited period. If you had thought, instead of acted like a thief, maybe people like Jeffry and I wouldn't mistake you for one.

So you can take your opinion of me and put it where the sun don't shine....makes

no difference to me at all, one way or the other what you think.

To Don and Jeffry,
Actually to ask is NOT illegal, and further more, who put you two, (The group Nazi's) in charge to judge me anyway, why don't you cast the first stone??? I know, because you are a hypocrite!!!
If you don't like it or think it is fishy, then mind your own damn business! BY THE WAY, I RECOVERED MY KEYS!!! So I say butt out and mind you business, for all

we know, you probably do worse acts when you think no one is looking!!!
You don't know me, and if was anyone else on this group, I would have helped them! As a matter of fact, I see MANY "regulars" of this group, in the radioprogramming group always asking for $600+ Moto software??? So where is the difference other than you had a bad day and came to this group to take it out on

me???
So, if you are not one to help, just keep your "mouth" (keyboard) shut!!! Funny how you people are so tough behind a computer screen, I'd like you to give me attitude like that in real life, all 6'5" / 270 pounds of me ;-)
So if you can't help (like I ask for, because I was having trouble with freescan), just but out and no comments from the peanut gallery!

So I would like to thank those, one in particular (you know who you are), that gave me the contact info to recover my keys for both programs.

And for the trolls, Jeffrey and Don, get off your high-horse!

Subject: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Hello Gentlemen,
I am looking for the 2 serials for ARC396Pro V 3.2.004 Pro - and ARCXTPro
V 1.5
Build 4, (Both take 2 "serials" actually "keys" , Key 1 and Key 2). Please
read
before judging me;
I have already bought both programs, even just got a new USB-1 cable for the
BCD396T / BCT15X / BCD996XT and a couple others....
I loaned the ONLY Notebook PC (with the ONLY copy of the serials, on that
notebook
pc), to a friend who's house just burned down. I was told I could get my
serials
back, but it could take some time and I am trying to program a couple
scanners for
a local neighborhood watch "Captain", he is disabled and the scanners were
donated
to him.
I just need to enter the serials, program the scanner, then will delete the
programs until I can get my serial back.

I need to program the scanners tonight or by 9:45 AM Monday! I have ALL of the data
to be uploaded or "sent" to the scanners in CSV format (from my own scanners that I
have programmed), I also have the saved system(s) files in the format the 2 respective softwares save the data as, I MUST program them ASAP though. I have been
awake 30+ hours now manually programming and trying to "clone" them from my scanners, but the firmware versions are different I think, or I just can't get them
to clone directly from scanner to scanner?

I appreciate any help.... I am at wits end here. I promise I DO HAVE my own serial
"floating" somewhere at BuTeL, but I need to program these scanners, just too soon
to wait for copies of my 4 keys, 2 x 2 keys.

Any/All help is GREATLY Appreciated!

Walter

5139. Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-02-08 03:07:10 UTC
From: Walter
Topic: 5123 Message: 5139

I agree Matthew,
I may have said some harsh things, BUT, it was only after I was treated like I stole everyone's 401K and ran off with it. If Jeffry and Don would have just pointed out the fact in a nice way, rather than go ballistic on me, I would have reacted different as well!
I really hate it when wannabe mods try to police groups and impose their morals on everyone else, and that itself is a bully!
I would have even apologized if Jeffry handled it different, but I will not now just for the fact he would not step off his faux throne.

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

I just read this thread, having sent all 396XT emails into a folder of its own just
before this happened.

Perhaps I can provide some perspective at this point, not being on anyone's side.

It is natural for Walter's request to "appear" suspicious- because 999,999/1,000,000
this type of request is BS.

How could you know that in this case it was GENUINE?

A couple of clues: 1- It is in this group. 2- Walter's email address is @...,
which could indicate a good internet provider in his area, possibly even his employer-
admittedly, possibly meaningless. The first clue, plus his focus and no misspellings...
ok, maybe it's not much, but he wasn't asking for something random. He just wanted
to program his radio.

On the other side: Walter has brought up the subject of bullying. He is guilty of at least
twice making violent threats in addition to name calling (Nazis ++) which eliminates him

as a person who can call others "cyber bullyers". He is one himself, without any doubt.

Walter did prove his GENUINENESS by stating that he obtained the keys himself.

Everyone else was just reacting GENUINELY because in 999,999/1,000,000 cases people are FRAUDS on the internet.

However, in this case, how many FRAUDS would want the keys to program a BCD396XT?

Walter was jumped on fast, instead of offered assistance. The story did sound fraudulent,
after we are bombarded with thousands like it. It is all too easy to look back and see that
it was not a fraud. In looking back my question is: would two installations of the software
nullify both of them?

Sometimes giving help is not so easy. I want to pick up wreckage material in the middle of
the highway even at night. But if I try, I could easily be killed. This is not nearly as risky,

but you see there is even a question about what could happen to both installations.

Additionally, Walter, it was not a true emergency. Getting your own installation keys is
something that you could do for yourself, with only a short delay.

I agree Matthew,
I may have said some harsh things, BUT, it was only after I was treated like I stole everyone's 401K and ran off with it. If Jeffry and Don would have just pointed out the fact in a nice way, rather than go ballistic on me, I would have reacted different as well!
I really hate it when wannabe mods try to police groups and impose their morals on everyone else, and that itself is a bully!
I would have even apologized if Jeffry handled it different, but I will not now just for the fact he would not step off his faux throne.

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

I just read this thread, having sent all 396XT emails into a folder of its own
just
before this happened.

Perhaps I can provide some perspective at this point, not being on anyone's
side.

It is natural for Walter's request to "appear" suspicious- because
999,999/1,000,000
this type of request is BS.

How could you know that in this case it was GENUINE?

A couple of clues: 1- It is in this group. 2- Walter's email address is
@...,
which could indicate a good internet provider in his area, possibly even his

employer-
admittedly, possibly meaningless. The first clue, plus his focus and no misspellings...
ok, maybe it's not much, but he wasn't asking for something random. He just wanted
to program his radio.

On the other side: Walter has brought up the subject of bullying. He is guilty of at least
twice making violent threats in addition to name calling (Nazis ++) which eliminates him

as a person who can call others "cyber bullyers". He is one himself, without any doubt.

Walter did prove his GENUINENESS by stating that he obtained the keys himself.

Everyone else was just reacting GENUINELY because in 999,999/1,000,000 cases people are FRAUDS on the internet.

However, in this case, how many FRAUDS would want the keys to program a BCD396XT?

Walter was jumped on fast, instead of offered assistance. The story did sound fraudulent,
after we are bombarded with thousands like it. It is all too easy to look back and see that
it was not a fraud. In looking back my question is: would two installations of the software
nullify both of them?

Sometimes giving help is not so easy. I want to pick up wreckage material in the middle of
the highway even at night. But if I try, I could easily be killed. This is not nearly as risky,

but you see there is even a question about what could happen to both installations.

Additionally, Walter, it was not a true emergency. Getting your own installation keys is
something that you could do for yourself, with only a short delay.

Matthew

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

EXCUSE ME! You are the guilty one, you didn't read the entire thread! I said I HAVE THE KEYS AND HAVE GONE THROUGH THE PROCESS (It takes a little time to

recover it), So I asked to BORROW someone's for a few minutes as I was at a critical point!

You would have seen that I loaned my notebook pc to a friend (that had ALL my scanner programs and RSS on it), to a friend, his house burned a couple weeks ago and my notebook was in his house! Look all the way down on this thread (this very email), and you will see that!!!
So I have paid for the software, and have since downloaded it again and recovered my keys, I was not nor was I acting like a thief!

The only law broken is called cyber bullying (a real crime), and you are the one breaking that law Mr. Radio Nazi, what should I do now Mein Führer, give you the Hitler salute!?!?!?
I am well aware that sharing software and/or keys, serial, flash codes, RSS, etc... is piracy, but the company that makes any given software should be the one to say something to me, if they were so worried, they would have already joined this group and gave me the tongue lashing you took upon yourself to give me!
So if you don't have anything nice to say, keep your trap SHUT! You could have simply said, "that would not be legal / moral for me to share that information with you" and I would have left it at that (which I did anyway, since I got my keys (recovered). But no, there always has to be that one troll that stirs everyone up or bullies people in the groups, and that is you in this group.
So if you know what is good for you, it would be wise who you call a thief, and who you bully, because I can give you about 4 or 5 dozen names of people here locally, that would tell you, "If you lived here in my area, you would drinks your meals for 6 months!
So if you want to keep on giving me crap and slandering me, go ahead, but, don't say you were not warned!

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Actually, it IS illegal. Soliciting to do an illegal activity is just as illegal as doing the activity.

And you're right...I don't know you, nor do I care to. With that in mind, you could be the best guy in the world or the worst, so I have no idea if you would or wouldn't remove the keys and software.

And if people are asking for $600+ software...they too are wrong. It's NOT the $$ amount that matters, it's the wanting something for nothing.

Butel software HAS a process to give you keys. Their software DOES work in demo mode for a time limited period. If you had thought, instead of acted like a thief, maybe people like Jeffry and I wouldn't mistake you for one.

So you can take your opinion of me and put it where the sun don't shine....makes

no difference to me at all, one way or the other what you think.

.

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

To Don and Jeffry,
Actually to ask is NOT illegal, and further more, who put you two, (The group Nazi's) in charge to judge me anyway, why don't you cast the first stone??? I know, because you are a hypocrite!!!
If you don't like it or think it is fishy, then mind your own damn business! BY THE WAY, I RECOVERED MY KEYS!!! So I say butt out and mind you business, for all

we know, you probably do worse acts when you think no one is looking!!!
You don't know me, and if was anyone else on this group, I would have helped them! As a matter of fact, I see MANY "regulars" of this group, in the radioprogramming group always asking for $600+ Moto software??? So where is the difference other than you had a bad day and came to this group to take it out on

me???
So, if you are not one to help, just keep your "mouth" (keyboard) shut!!! Funny how you people are so tough behind a computer screen, I'd like you to give me attitude like that in real life, all 6'5" / 270 pounds of me ;-)
So if you can't help (like I ask for, because I was having trouble with freescan), just but out and no comments from the peanut gallery!

So I would like to thank those, one in particular (you know who you are), that gave me the contact info to recover my keys for both programs.

And for the trolls, Jeffrey and Don, get off your high-horse!

Subject: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Hello Gentlemen,
I am looking for the 2 serials for ARC396Pro V 3.2.004 Pro - and ARCXTPro V 1.5
Build 4, (Both take 2 "serials" actually "keys" , Key 1 and Key 2). Please read
before judging me;
I have already bought both programs, even just got a new USB-1 cable for the BCD396T / BCT15X / BCD996XT and a couple others....
I loaned the ONLY Notebook PC (with the ONLY copy of the serials, on that notebook
pc), to a friend who's house just burned down. I was told I could get my serials
back, but it could take some time and I am trying to program a couple scanners for
a local neighborhood watch "Captain", he is disabled and the scanners were donated
to him.
I just need to enter the serials, program the scanner, then will delete the programs until I can get my serial back.

I need to program the scanners tonight or by 9:45 AM Monday! I have ALL of the data
to be uploaded or "sent" to the scanners in CSV format (from my own scanners that I
have programmed), I also have the saved system(s) files in the format the 2 respective softwares save the data as, I MUST program them ASAP though. I have been
awake 30+ hours now manually programming and trying to "clone" them from my scanners, but the firmware versions are different I think, or I just can't get them
to clone directly from scanner to scanner?

I appreciate any help.... I am at wits end here. I promise I DO HAVE my own serial
"floating" somewhere at BuTeL, but I need to program these scanners, just too soon
to wait for copies of my 4 keys, 2 x 2 keys.

Any/All help is GREATLY Appreciated!

Walter

EXCUSE ME! You are the guilty one, you didn't read the entire thread! I said
I
HAVE THE KEYS AND HAVE GONE THROUGH THE PROCESS (It takes a little time to
recover it), So I asked to BORROW someone's for a few minutes as I was at a
critical point!

You would have seen that I loaned my notebook pc to a friend (that had ALL
my
scanner programs and RSS on it), to a friend, his house burned a couple
weeks
ago and my notebook was in his house! Look all the way down on this thread
(this
very email), and you will see that!!!
So I have paid for the software, and have since downloaded it again and
recovered my keys, I was not nor was I acting like a thief!

The only law broken is called cyber bullying (a real crime), and you are the
one
breaking that law Mr. Radio Nazi, what should I do now Mein Führer, give you
the
Hitler salute!?!?!?
I am well aware that sharing software and/or keys, serial, flash codes, RSS,
etc... is piracy, but the company that makes any given software should be
the
one to say something to me, if they were so worried, they would have already
joined this group and gave me the tongue lashing you took upon yourself to
give

me!
So if you don't have anything nice to say, keep your trap SHUT! You could have
simply said, "that would not be legal / moral for me to share that information
with you" and I would have left it at that (which I did anyway, since I got my
keys (recovered). But no, there always has to be that one troll that stirs
everyone up or bullies people in the groups, and that is you in this group.
So if you know what is good for you, it would be wise who you call a thief, and
who you bully, because I can give you about 4 or 5 dozen names of people here
locally, that would tell you, "If you lived here in my area, you would drinks
your meals for 6 months!
So if you want to keep on giving me crap and slandering me, go ahead, but, don't
say you were not warned!

Walter

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Actually, it IS illegal. Soliciting to do an illegal activity is just as
illegal as doing the activity.

And you're right...I don't know you, nor do I care to. With that in mind, you
could be the best guy in the world or the worst, so I have no idea if you would
or wouldn't remove the keys and software.

And if people are asking for $600+ software...they too are wrong. It's NOT the
$$ amount that matters, it's the wanting something for nothing.

Butel software HAS a process to give you keys. Their software DOES work in demo
mode for a time limited period. If you had thought, instead of acted like a
thief, maybe people like Jeffry and I wouldn't mistake you for one.

So you can take your opinion of me and put it where the sun don't shine....makes

no difference to me at all, one way or the other what you think.

.

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

To Don and Jeffry,
Actually to ask is NOT illegal, and further more, who put you two, (The group
Nazi's) in charge to judge me anyway, why don't you cast the first stone??? I
know, because you are a hypocrite!!!
If you don't like it or think it is fishy, then mind your own damn business! BY
THE WAY, I RECOVERED MY KEYS!!! So I say butt out and mind you business, for all

we know, you probably do worse acts when you think no one is looking!!!
You don't know me, and if was anyone else on this group, I would have helped them! As a matter of fact, I see MANY "regulars" of this group, in the radioprogramming group always asking for $600+ Moto software??? So where is the
difference other than you had a bad day and came to this group to take it out on

me???
So, if you are not one to help, just keep your "mouth" (keyboard) shut!!! Funny
how you people are so tough behind a computer screen, I'd like you to give me
attitude like that in real life, all 6'5" / 270 pounds of me ;-)
So if you can't help (like I ask for, because I was having trouble with freescan), just but out and no comments from the peanut gallery!

So I would like to thank those, one in particular (you know who you are), that
gave me the contact info to recover my keys for both programs.

And for the trolls, Jeffrey and Don, get off your high-horse!

Subject: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Hello Gentlemen,
I am looking for the 2 serials for ARC396Pro V 3.2.004 Pro - and ARCXTPro V 1.5
Build 4, (Both take 2 "serials" actually "keys" , Key 1 and Key 2). Please read
before judging me;
I have already bought both programs, even just got a new USB-1 cable for the BCD396T / BCT15X / BCD996XT and a couple others....
I loaned the ONLY Notebook PC (with the ONLY copy of the serials, on that notebook
pc), to a friend who's house just burned down. I was told I could get my serials
back, but it could take some time and I am trying to program a couple scanners for
a local neighborhood watch "Captain", he is disabled and the scanners were donated
to him.
I just need to enter the serials, program the scanner, then will delete the programs until I can get my serial back.

I need to program the scanners tonight or by 9:45 AM Monday! I have ALL of the data
to be uploaded or "sent" to the scanners in CSV format (from my own scanners that I
have programmed), I also have the saved system(s) files in the format the 2 respective softwares save the data as, I MUST program them ASAP though. I have been
awake 30+ hours now manually programming and trying to "clone" them from my scanners, but the firmware versions are different I think, or I just can't get them
to clone directly from scanner to scanner?

I appreciate any help.... I am at wits end here. I promise I DO HAVE my own serial

"floating" somewhere at BuTeL, but I need to program these scanners, just
too soon
to wait for copies of my 4 keys, 2 x 2 keys.

Any/All help is GREATLY Appreciated!

Walter

I agree Matthew,
I may have said some harsh things, BUT, it was only after I was treated like I stole everyone's 401K and ran off with it. If Jeffry and Don would have just pointed out the fact in a nice way, rather than go ballistic on me, I would have reacted different as well!
I really hate it when wannabe mods try to police groups and impose their morals on everyone else, and that itself is a bully!

I would have even apologized if Jeffry handled it different, but I will not now just for the fact he would not step off his faux throne.

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

I just read this thread, having sent all 396XT emails into a folder of its own
just
before this happened.

Perhaps I can provide some perspective at this point, not being on anyone's side.

It is natural for Walter's request to "appear" suspicious- because 999,999/1,000,000
this type of request is BS.

How could you know that in this case it was GENUINE?

A couple of clues: 1- It is in this group. 2- Walter's email address is @bellsouth.net,
which could indicate a good internet provider in his area, possibly even his employer-
admittedly, possibly meaningless. The first clue, plus his focus and no misspellings...
ok, maybe it's not much, but he wasn't asking for something random. He just wanted
to program his radio.

On the other side: Walter has brought up the subject of bullying. He is guilty
of at least
twice making violent threats in addition to name calling (Nazis ++) which eliminates him

as a person who can call others "cyber bullyers". He is one himself, without any doubt.

Walter did prove his GENUINENESS by stating that he obtained the keys himself.

Everyone else was just reacting GENUINELY because in 999,999/1,000,000 cases people are FRAUDS on the internet.

However, in this case, how many FRAUDS would want the keys to program a BCD396XT?

Walter was jumped on fast, instead of offered assistance. The story did sound
fraudulent,
after we are bombarded with thousands like it. It is all too easy to look back
and see that
it was not a fraud. In looking back my question is: would two installations of
the software
nullify both of them?

Sometimes giving help is not so easy. I want to pick up wreckage material in the middle of
the highway even at night. But if I try, I could easily be killed. This is not
nearly as risky,

but you see there is even a question about what could happen to both installations.

Additionally, Walter, it was not a true emergency. Getting your own installation keys is
something that you could do for yourself, with only a short delay.

Hitler salute!?!?!?
I am well aware that sharing software and/or keys, serial, flash codes, RSS, etc... is piracy, but the company that makes any given software should be the
one to say something to me, if they were so worried, they would have already joined this group and gave me the tongue lashing you took upon yourself to give
me!
So if you don't have anything nice to say, keep your trap SHUT! You could have
simply said, "that would not be legal / moral for me to share that information
with you" and I would have left it at that (which I did anyway, since I got my
keys (recovered). But no, there always has to be that one troll that stirs everyone up or bullies people in the groups, and that is you in this group.
So if you know what is good for you, it would be wise who you call a thief, and
who you bully, because I can give you about 4 or 5 dozen names of people here
locally, that would tell you, "If you lived here in my area, you would drinks
your meals for 6 months!
So if you want to keep on giving me crap and slandering me, go ahead, but, don't
say you were not warned!

Walter

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Actually, it IS illegal. Soliciting to do an illegal activity is just as illegal as doing the activity.

And you're right...I don't know you, nor do I care to. With that in mind, you
could be the best guy in the world or the worst, so I have no idea if you would
or wouldn't remove the keys and software.

And if people are asking for $600+ software...they too are wrong. It's NOT the
$$ amount that matters, it's the wanting something for nothing.

Butel software HAS a process to give you keys. Their software DOES work in demo
mode for a time limited period. If you had thought, instead of acted like a
thief, maybe people like Jeffry and I wouldn't mistake you for one.

So you can take your opinion of me and put it where the sun don't shine....makes

no difference to me at all, one way or the other what you think.

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

To Don and Jeffry,
Actually to ask is NOT illegal, and further more, who put you two, (The group
Nazi's) in charge to judge me anyway, why don't you cast the first stone??? I
know, because you are a hypocrite!!!
If you don't like it or think it is fishy, then mind your own damn business! BY
THE WAY, I RECOVERED MY KEYS!!! So I say butt out and mind you business, for all

we know, you probably do worse acts when you think no one is looking!!!
You don't know me, and if was anyone else on this group, I would have helped
them! As a matter of fact, I see MANY "regulars" of this group, in the
radioprogramming group always asking for $600+ Moto software??? So where is the
difference other than you had a bad day and came to this group to take it out on

me???
So, if you are not one to help, just keep your "mouth" (keyboard) shut!!! Funny
how you people are so tough behind a computer screen, I'd like you to give me
attitude like that in real life, all 6'5" / 270 pounds of me ;-)
So if you can't help (like I ask for, because I was having trouble with
freescan), just but out and no comments from the peanut gallery!

So I would like to thank those, one in particular (you know who you are), that
gave me the contact info to recover my keys for both programs.

And for the trolls, Jeffrey and Don, get off your high-horse!

Subject: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

Hello Gentlemen,
I am looking for the 2 serials for ARC396Pro V 3.2.004 Pro - and ARCXTPro
V 1.5
Build 4, (Both take 2 "serials" actually "keys" , Key 1 and Key 2). Please
read
before judging me;
I have already bought both programs, even just got a new USB-1 cable for the
BCD396T / BCT15X / BCD996XT and a couple others....
I loaned the ONLY Notebook PC (with the ONLY copy of the serials, on that
notebook
pc), to a friend who's house just burned down. I was told I could get my
serials
back, but it could take some time and I am trying to program a couple
scanners for
a local neighborhood watch "Captain", he is disabled and the scanners were
donated
to him.
I just need to enter the serials, program the scanner, then will delete the
programs until I can get my serial back.

I need to program the scanners tonight or by 9:45 AM Monday! I have ALL of the data
to be uploaded or "sent" to the scanners in CSV format (from my own scanners that I
have programmed), I also have the saved system(s) files in the format the 2 respective softwares save the data as, I MUST program them ASAP though. I have been
awake 30+ hours now manually programming and trying to "clone" them from my scanners, but the firmware versions are different I think, or I just can't get them
to clone directly from scanner to scanner?

I appreciate any help.... I am at wits end here. I promise I DO HAVE my own serial
"floating" somewhere at BuTeL, but I need to program these scanners, just too soon
to wait for copies of my 4 keys, 2 x 2 keys.

Any/All help is GREATLY Appreciated!

Walter

I agree Matthew,
I may have said some harsh things, BUT, it was only after I was treated like I stole everyone's 401K and ran off with it. If Jeffry and Don would have just pointed out the fact in a nice way, rather than go ballistic on me, I would have reacted different as well!
I really hate it when wannabe mods try to police groups and impose their morals on everyone else, and that itself is a bully!
I would have even apologized if Jeffry handled it different, but I will not now just for the fact he would not step off his faux throne.

Walter

Subject: Re: [BCD396XT] Need Keys Urgently - just for 10 - 15 minutes

I just read this thread, having sent all 396XT emails into a folder of its own
just
before this happened.

Perhaps I can provide some perspective at this point, not being on anyone's side.

It is natural for Walter's request to "appear" suspicious- because 999,999/1,000,000
this type of request is BS.

How could you know that in this case it was GENUINE?

A couple of clues: 1- It is in this group. 2- Walter's email address is @...,
which could indicate a good internet provider in his area, possibly even his employer-
admittedly, possibly meaningless. The first clue, plus his focus and no misspellings...
ok, maybe it's not much, but he wasn't asking for something random. He just wanted

to program his radio.

On the other side: Walter has brought up the subject of bullying. He is guilty
of at least
twice making violent threats in addition to name calling (Nazis ++) which eliminates him

as a person who can call others "cyber bullyers". He is one himself, without any doubt.

Walter did prove his GENUINENESS by stating that he obtained the keys himself.

Everyone else was just reacting GENUINELY because in 999,999/1,000,000 cases people are FRAUDS on the internet.

However, in this case, how many FRAUDS would want the keys to program a BCD396XT?

Walter was jumped on fast, instead of offered assistance. The story did sound
fraudulent,
after we are bombarded with thousands like it. It is all too easy to look back
and see that
it was not a fraud. In looking back my question is: would two installations of
the software
nullify both of them?

Sometimes giving help is not so easy. I want to pick up wreckage material in the middle of
the highway even at night. But if I try, I could easily be killed. This is not
nearly as risky,

but you see there is even a question about what could happen to both installations.

Additionally, Walter, it was not a true emergency. Getting your own installation keys is
something that you could do for yourself, with only a short delay.

Matthew

Your words below: " You could have simply said, "that would not be legal / moral for me to share that information with you" and I would have left it at that"

Apparently not, because my total reply to your request was:

"What you are asking for is illegal"

From that...you then called me a nazi, a troll and a bully, said you were 6' 5" and 270 lbs and intimated that I wouldn't dare say those words to your face.

I guess I should have mentioned I was a Denver cop for 26 years...took In Sunny Liston. Big guys don't bother me at all.

pc), to a friend who's house just burned down. I was told I could get my
serials
back, but it could take some time and I am trying to program a couple
scanners for
a local neighborhood watch "Captain", he is disabled and the scanners were
donated
to him.
I just need to enter the serials, program the scanner, then will delete the
programs until I can get my serial back.

I need to program the scanners tonight or by 9:45 AM Monday! I have ALL
of the data

to be uploaded or "sent" to the scanners in CSV format (from my own scanners that I
have programmed), I also have the saved system(s) files in the format the 2 respective softwares save the data as, I MUST program them ASAP though. I have been
awake 30+ hours now manually programming and trying to "clone" them from my scanners, but the firmware versions are different I think, or I just can't get them
to clone directly from scanner to scanner?

I appreciate any help.... I am at wits end here. I promise I DO HAVE my own serial
"floating" somewhere at BuTeL, but I need to program these scanners, just too soon
to wait for copies of my 4 keys, 2 x 2 keys.

Any/All help is GREATLY Appreciated!

Walter

Other than connecting it to a PC that will automate the process, no.

Yes, and I apologize for letting this go on so long. I've been under the weather recently.

I will be deleting any moderated message on this topic, as Walter has resolved his issue and there is no need for any points other than have already been made.

Also, Walter will be put on moderation for his replies.

As for this topic, consider it CLOSED.

Thank you,
List Moderator

Do you have any channels (talkgroups) programmed?

Do you have them in Groups that are disabled?

Now that several individuals seem to have *blown up*, calmed down and repeated the "activities" a couple more times, the board somewhat appears to have regained some sanity...

Walter, I'm very sorry you found yourself in the situation you were in! I have myself. And with Gommert's ARC software too - so I know quite well how you felt! But unfortunately one cannot solicit keys (i.e. serial numbers) from someone else's software. And if they give you the serial numbers, they would be breaking the law. Just because you already own the software yourself and were in a position you were in - being unable to access your own serial numbers - does not negate the law.

I have been involved with computers and software for several decades. No question, Gommert will verify exactly what I've said - please ask him yourself. Both the solicitation and the sharing of commercial software serial numbers is illegal. It doesn't matter if an individual has requested a replacement or not. The point is that the serial number belongs to someone else and the law is clear. I know it's not what you want to "hear" (read) but, as I said, check with Gommert - he will verify it for you, if you'd like. And please, do not take this as any kind of an "attack" or the like! I'm simply passing on the facts as they are, nothing more.

Hi Glenn,

Welcome to the group. I frequently vacation in Dare County, one of my favorite places. Usually stay in Kill Devil Hills and always take a scanner. Have Dare Co. upgraded to trunking systems? I usually monitor beach patrol, PD, FD and USCG.

I believe you will like the 396XT.

Nick

The folks at the Kitty Hawk Fire Dept told me a couple of months ago that Dare County will be switching to their new system, which has access to VIPER but is not VIPER in and of itself, by spring. I saw somewhere that the switch is expected to take place late next month.

I'm starting to learn about talk groups, system IDs and such, as this is all new to me, and hope to be at least somewhat up to speed on these things by the time I can get the scanner. I'm sure it will begin to make more sense once I have the scanner and the software. At least, I hope it will.

Glenn

Hi, Glenn -

Welcome to the group. You can find lots of information about the new trunked radio systems at the www.radioreference.com web site... especially in the Wiki.

The 396 is a great scanner and I expect that you will enjoy it once you manage the learning curve.

Hi all,
I was monitoring the S.E. DOD P-25 sytem tonight (Eglin AFB), and on the main "Police Primary" dispatch TG-40148, I only hear the Dispatcher? Can they be using Encryption to respond to dispatch? But if so, how is the dispatcher "in the clear", I thought that a TG had to either be encrypted or not?

Thanks,
Walter

Good chance they are encrypted.

TGs are neither encrypted or clear. It's the radios and consoles that are encrypted or clear. Sometimes a radio (or all of them) will have a channel (TG) strapped clear or strapped encrypted, but it's always a function of the radio as to the selection. Most often, the encryption is selectable on the radio on or off.

The sheriff's department where I live does this all the time where either dispatch and/or another unit will respond to an encrypted call but they are on a P25 conventional system. Not sure how that would work on a trunking system.

That sounds like a very old feature. Some public safety systems have a dispatch mode that disables the repeat or three way feature. That causes the system to revert to a two frequency duplex system. This is done primarily to prevent the mobile transmission from being rebroadcast. A couple of examples would be if the mobile were transmitting sensitive information or if an assembly were called, no one could inadvertently blurt out the assembly location point.

It's a current technique on the latest trunking systems. Not old at all.

The feature you mentioned is used on conventional systems, but I've never heard (or even heard of) that ability with a trunking system. The dispatch console can override the audio of a user, but cannot disable the transmitter(s). It's unlikely that they override the audio on every response. Of course, a way to tell is to listen for calls initiated by the mobile unit, as the dispatcher has no way to know when a call would be initiated in the field.

Yes, it may be dispatcher exclusive override. When the dispatcher keys down, it mutes mobile audio so the dispatcher can be heard in the clear. At the dispatch console, they will continue to hear the audio transmitted from the mobile because the console is full duplex. So the dispatcher could intentionally key up to prevent the mobile transmission from being repeated.

I always thought it was funny when there was a stuck microphone and the dispatcher would send "All elements check your mic's". The element that this transmission was intended for couldn't possibly hear the transmission because the mobile radios were exclusively half duplex. Of course nowadays, most officers carry a portable so they would hear feedback or would actually hear the dispatcher say that...

You need to program the group ID's you want into the site' group memory. Read the manual on how by using the scanner menus. It is much easier using the software.

Thanks Cris,
But it almost like a semi-duplex system, I can hear the dispatcher and it does show the "P25" when talking, but when she stops talking, nada! Not even the "ENC", "DAT", nothing, it's like she is tx'ing "in the blind"?
In case someone asks, yes, the TG ID is programmed into the system, I am scanning ID's and searching ID's.

Thanks,
Walter

A couple other possibilities:

1. They could be talking on a dispatch channel to a unit that is on another channel. (but your ID SEARCH should catch that)

2. They could be on a simulcast dispatch channel and the mobile is answering on another system.

I've seen both of the above in use.

Actually Joe, that's not correct. A talkgroup can be set in the system to be clear only, secure only, or selectable encrypt. On our system, we have most talkgroups set to selectable encrypt. We generally allow the officers to select encrypt mode, but on some we don't.

Speaking primarily of Motorola Radios, the encryption is handled different than one would think.

If all the radios used by a department are loaded with the same encryption key, the reception of both encrypted and unencrypted transmissions is invisible to the Receiving station (except the encryption symbol - a flashing zero with a slash through it - is visible on the display).

The Transmitting station, depending on the software setting, can either be clear/secure only/selectable encrypt, as is discussed below. So, if the software is set for "selectable encrypt", the decision to encrypt is made by the transmitting station, with no setting changes required of the receiving station to receive encrypted or non-encrypted transmissions (provided all radios involved have the same encryption key loaded).

If you have a Motorola radio without a similar encryption key, the squelch is not broken with the reception of an encrypted transmission. You do not hear the transmission at all.

The software can also be set to make the radio sound a beep when "in the clear" when the PTT is pressed to remind the person transmitting that the transmission is non-encrypted.

So, listening on a scanner it makes a big difference to us whether encrypted or non-encrypted, but within a department, it is fairly invisible.

He who programs the radios and the system (me in both cases on the system I work on for a living). Let me give a little more detail here. Remember that darn near everything is programmable both in the system and the user radios.

On the subscriber radios, a switch can be programmed to give end user control of encryption. Each conventional channel or trunked talkgroup can be programmed in the radios to be always clear, always secure, or user selectable. If it is programmed in the radio to be always secure or always clear, it does not matter what the user does with the switch, it's going to operate the way it was programmed. In some systems, the end user has encryption control and in some they don't. Personally I favor taking the control away from the end user.

In the system, first I will tell you that my experience is with Motorola trunking systems - other manufacturers may be different. On the Motorola systems, any talkgroup can be set to be always clear, always secure, or either.

And in case you are wondering, if a talkgroup is programmed in the radio in a way that conflicts with the system programming, the user will not be able to transmit. Kinda important that the programming matches!

I currently run a moderate sized multi-agency Motorola SmartZone trunked system. Prior to that I did the same job on a large utility SmartZone system that was for a while the largest SmartZone system in the world. Part of my job is to set configurations in the system, and another part is to write the codeplugs that are used for programming field user radios.

Anybody on this list using a BCD396XT as the voice following radio with Unitrunker VER 20 or any version ?
I am not having any luck with a 396XT.
I have successfully used a BCD996T, but selecting a 396XT (and or a BCD996XT) as Control Type and the same cable,
baud rate (verified), 8N1 Data bits, com port, the scanner is not connecting

Clark

Clark,

I have had sucess using Unitrunker with 396XT.

I set the baudrate at the highest 115k, N81.

It should say "Inline" and I rememeber having to manually tell the software to run.

Actually the ability to turn off repeat mode is possible with the
Motorola SmartZone system I work on. Not a normal feature, but if we
program it, any dispatcher can turn off repeat mode on any talkgroup we
have programmed to allow it. This is not to be confused with dispatcher
override where the dispatcher audio is transmitted. In this case there
is no repeater transmit. Works just fine on our trunked system.

Everything seems to be working as it should this morning, don't know what
the problem was.
For Type, I have selected "Control" as the 396XT is the voice following
unit and not the control channel decoder.

Jim and Joe,
I appreciate all the info, I just learned a good bit more than I did about the Moto system here. Also, curious enough, ALL of the TG ID's seem to be "in the clear" tonight, weird. For some time now, they (Eglin, Hurlburt, Floridale, Navy NOLF's, Whiting, NAS Pensacola, etc..), have had a number of "regular" ID's that were encrypted and non-encrypted. Seems like this weekend they encrypted almost everything, now it seems everything is now non-encrypted? Either doing exercises maybe, or making changes to the system?

One thing I always thought peculiar, NAS Whiting Police is almost always in the clear, yet their Fire Dept. is always encrypted, but the Fire Dept. is also dispatched on Santa Rosa County, FL Central Fire (154.160 - Station 24), and it is analog/conventional, and they talk more on that system it seems?

Thanks for all the help,
Walter

He who programs the radios and the system (me in both cases on the system I work on for a living). Let me give a little more detail here. Remember that darn near everything is programmable both in the system and the user radios.

On the subscriber radios, a switch can be programmed to give end user control of encryption. Each conventional channel or trunked talkgroup can be programmed in the radios to be always clear, always secure, or user selectable. If it is programmed in the radio to be always secure or always clear, it does not matter what the user does with the switch, it's going to operate the way it was programmed. In some systems, the end user has encryption control and in some they don't. Personally I favor taking the control away from the end user.

In the system, first I will tell you that my experience is with Motorola trunking systems - other manufacturers may be different. On the Motorola systems, any talkgroup can be set to be always clear, always secure, or either.

And in case you are wondering, if a talkgroup is programmed in the radio in a way that conflicts with the system programming, the user will not be able to transmit. Kinda important that the programming matches!

I currently run a moderate sized multi-agency Motorola SmartZone trunked system. Prior to that I did the same job on a large utility SmartZone system that was for a while the largest SmartZone system in the world. Part of my job is to set configurations in the system, and another part is to write the codeplugs that are used for programming field user radios.

Clark and Lance,
What type of cable are you using, and how do you connect the radio to the Linux machine, discriminator tap, RS-232, or USB-1 cable? I am curious, because I can not get the RS-232 or USB-1 to "connect" between the 396XT, 396T, or 996XT?

Thanks,
Walter

Clark,

I have had sucess using Unitrunker with 396XT.

I set the baudrate at the highest 115k, N81.

It should say "Inline" and I rememeber having to manually tell the software to run.

Also, I don't understand why many TG's are non-encrypted, but should be if you heard the traffic on them, yet they encrypt simple dispatch main TG's and not the Tac groups? They just started doing this, because I could hear both sides before, and what was encrypted is no longer encrypted, maybe they changed the TG ID's around? Any suggestions or opinions on that?

Thanks for the help,
Walter

Yes, most of that was mentioned previously. In fact, I mentioned that
the radios can be strapped clear, strapped encrypted, or made user
selectable. All this is per-channel programming.

Then Jim Walls mentioned that the system itself has the same settings on
each talkgroup.

So, I naturally asked if there is a conflict between the system and the
radio, which rules? The system or the radio? Or would the radio simply
not transmit?

Why government entities do things is largely a mystery.

Maybe they figure they don't want people to know where their units are
going.

Thanks. That was what I was looking for.

I've programmed P25 mobiles and portables, but not a P25 trunk system (yet). I've also programmed mobiles and portables for most system types. My experience is also with largely Motorola equipment, but I have programmed others as well.

As for letting the user have control, there are users out there, as I'm sure you are aware, who don't know how to use radios (despite being trained) and who think they are encrypted when they are not. That can get 'interesting'.

Joe, could you explain, "strapped"?

Ken

From: BCD396XT@yahoogroups.com [mailto:BCD396XT@yahoogroups.com] On Behalf Of MCH

Subject: Re: [BCD396XT] P-25 Question - never run into this before.

Yes, most of that was mentioned previously. In fact, I mentioned that the radios can be strapped clear, strapped encrypted, or made user selectable. All this is per-channel programming.

Then Jim Walls mentioned that the system itself has the same settings on each talkgroup.

So, I naturally asked if there is a conflict between the system and the radio, which rules? The system or the radio? Or would the radio simply not transmit?

Strapped: (Literal definition). Tied down. Made to not move.
Specifically, not allowing the user to change the setting.

I have noticed something odd on our P25 system recently. Normally Car to Car 2 is encrypted, but when there is a major incident on the district channel all normal comms go to Car to Car 1 and Car to Car 2 suddenly is no longer encrypted.That tells me that dispatch has some control over the encryption capabilities of Car to Car 2 when they "push" normal comms off to Car to Car 1.

Clark was trying to use it as a voice scanner
which requires more communications with the unit.

That may account for the reason yours works and his doesn't.

Attempting to use the 396XT as a voice unit.
I also have a BCD996XT and it works as a voice unit even with the Model selected as BCD396XT.
Same cable connected to same USB connector.
So evidently the XTs use the same commands.
The 396XT is able to be programmed with ARC and Freescan software so I would think that rules out the
396XT jack.

Clark,

I think you should contact the developer of Unitrunker about this.

There is a thread current up on Radio Reference regarding the new release version...

5202. [BCD396XT] BCD396XT with Unitrunker

Date: 2011-02-16 23:56:13 UTC
From: Clark Rennie
Topic: 5164 Message: 5202

Just in case somebody missed my original post, I'm asking again.

Anybody on this list using a BCD396XT as the voice following radio with
Unitrunker VER 20 or any version ?
I am not having any luck with a 396XT.
I have successfully used a BCD996T (works like a champ), but selecting a
396XT as Control Type and the same cable,
baud rate (verified), 8N1 Data bits, com port, the scanner is not connecting.

The author of UniTrunker asked for Tuner-20110214.log
But I can't locate that file anywhere on my two machines.

Thanks, Clark

Clark,
Sorry, I have not gotten as far as you at this point. I had it working on an 996T, then trying to use 2 machines and radios, I did something that completely put me back to zero. I would be interested in how yours turns out. I have a friend that works on Marine/Navy Comm systems, he is going to help me set up my system when he gets back from Iraq, but that will be late Aug. - early Sept. this year.

Walter

So is Unitrunker and it displays all the activity on the system with
different degrees of priority so the user
can select which TG will over ride another TG. Does require two scanners to
listen and follow the voice traffic.

How would that help? Unitrunker is a control channel decoder while
bcTool is a programming tool (two completely different things).

BCTool and Unitrunker are two totally different programs, Unitrunker is NOT a programming tool like BCTool is.It logs system data and allows, among many things for new TGIDs to be found as well as channels and bandplans on rebanded systems.....and much more.

I have a PRO2006 with a discriminator tap as the "Signal" unit (connected
to the sound card) which is parked on the control channel an a
BCD996XT (also a BCD996T) as the "Control" scanner to follow the voice traffic.

The BCD396XT just will not conned but works perfectly with Freescan and
ARCXT to program and use the
Virtual Control feature.

UniTrunker is a great program to watch all the activity. A scanner can only
stop on one TG at a time but with
UniTrunker a TG that is more desired than be selected and followed by
selecting different degrees of priority.
Difficult to explain but easy to see when it is displayed.

It simply sounds like Unitrunker has not
been updated to support the XT models.

The documentation states "All Uniden Models" are supported.
My 996XT works perfectly as a voice following unit and both my 996XT and
396XT work as a signal source,
when optioned to "C-CH Output".

I guess I'm just trying to confirm if my 396XT is defective or not, in all
the replies on this list and on the RR
Forum "Trunking Control Channel Decoding" on the subject of Unitrunker, no
one has stated their use of the
BCD396XT as a voice following unit.

Yo Clark,

Try setting the C-CH output to extended (3rd option)...

Clark,

I think the guy that makes Unitrunker needs to know of this condition
you are experiencing with the software. He could save you a lot of time.
If there is a problem, he could address the issue, which will benefit the entire 396XT
community...

Best of skill.

I hate it when they make generic claims, as they are never absolutely
true. It's true when it is written, but as soon as the next model comes
out it may not longer be true. I bet it doesn't support the BC245XLT.

But, it sounds like the 396XT is not supported.

There is no unit validation AFAIK when the scanner is used as a control
output, as the scanner is just spitting out data. But, for control the
unit must be validated (the SW has to be able to recognize that it's
that model number). That would explain why anything works as a data scanner.

That would make no difference for the voice scanner. That only affects
what is sent on the control channel output (data scanner).

Hi Clark,

As I mentioned in a previously in another posting, I was using it in Data Mode.

When are you going to contact Unitrunker's designer?

My suggestion to try C-CH out in extended was a simple last ditch suggestion...

Just a suggestion as I did not write the code for Unitrunker...

Hope you find the answers to this mystery.

5218. Clark's Unitrunker issue...

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-02-17 18:41:26 UTC
From: Lance Star
Topic: 5218 Message: 5218

Clark,

Have you seen this thread up on RR?

http://forums.radioreference.com/trunking-control-channel-decoding/195045-unitrunker-logs.html

Read the very last few posts, it mentions a completely clean install of the lastest version.

Perhaps this would at least allow you to post a log file up on RR for Unitrunker to examine...

Best of skill...

Lance, as I stated in a previous reply, I already have contacted the author (Rick Parrish) and he asked
for a copy of a .log file that I can't seem to locate on either of my two machines.

Well, the wiki must have been edited on Radioreference, but as I recall, the XT had to have the control channel of interest programmed into a system, then you could hold on the contol channel and send data to the port if the C-Channel output was set to on. You just couldn't "tune" to a control channel to make it work. It also works with the BCT15, BC346XT, and BCD996XT the same way.

I hope this is not a repeat question but I just joined and have searched the archive and had no luck finding an answer.

What is the best programing software for the 396XT I have been using BCD396T_USD for my 396T and cant find any equivalent for the 396XT.
Thanks
Roger

The 'best' depends on your wants and needs. They are all a little
different, and nearly all of them have unique features.

Some options are (in no alphabetical order):
ARC-XT, bcTool, FreeScan, ProScan, and ScanControl.

I have Arc XT Pro and ProScan. I should get Freescan just to be able to play with it and see how it compares, but I'm pretty happy with the programs that I have so I haven't made the effort. If I had to choose one at this point, I would
certainly choose ProScan.

I really like Freescan, and use it for my 396XT and 996XT.

It helps with everything from programming, organization, recording audio, logging traffic and more. I like it so much I just made a donation, and for something that's absolutely free - it works flawlessly for me.

Some of my other favorite add-ons for the 396XT are;

WinMDCD (Decodes Motorola MDC data bursts.

WinCTCSS - CTCSS / PL Tone decoder

Scanner Recorder - Records Audio - http://www.davee.com/scanrec/

ID Tracker II - Logs traffic, signal strength and scanner remote control

Vox Recorder - Audio Record

Pitch Perfect - Actually a Guitar Tuner that acts as a frequency counter for decoding tones - http://www.nch.com.au/tuner/index.html

Hope that helps - Enjoy!

You have to be "parked" on the CC AND have the CC option set to ON, not EXTENDED. I haven't tried using the XT as a voice scanner though, just never had the need.

Hi John, Just to add to your post. The XT has to be parked on a control channel that is programmed into in a System first, then it will output to the port. You just can't park on a frequency in the direct entry or search mode. CC on will work fine, and extended is not needed.

On Thu, Feb 17, 2011 at 7:20 PM, johnstark wrote:

According to the Unitrunker site:

http://www.unitrunker.com/uniden.html

Do not use extended output as the program is not set up for that data.

Everybody
Thanks for the help
I used Freescan and accomplished the purpose of get it on the air.
Now I will have more time for research and learn all the features.
Roger

I thought you had been following the thread which clearly specifies
issues with the voice scanner aspect, and not the data aspect.

Let's just call it not "fully" supported.

If it doesn't support data it certainly wouldn't work on voice. However it's supposed to do both. Because something isn't working as it is supposed to doesn't infer it's not supported, it simply means it isn't working as it should. Big difference between something being "supported" and "working" properly.

From: MCH
Topic: 5164 Message: 5241

It does seem to support the data end of things, as has been mentioned
several times. But, it does not seem to support the voice scanner aspects.

As for the difference between "not being supported" vs "not working
properly", to the user there is no difference between the two. In either
case, it won't work for what they want. I call something "supported"
when it works.

Joe M.

5244. Re: BCD396XT with Unitrunker

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-02-19 10:13:03 UTC
From: unitrunker
Topic: 5164 Message: 5244

Clark had indeed sent emails asking for a solution. As he is unable to get a log, perhaps someone else can. If someone here has a '396XT and is willing to do some testing, we might be able to fix this so that Clark and anyone else has the option of using the '396XT for voice following.

--- In BCD396XT@yahoogroups.com, Clark Rennie <c.rennie1@...> wrote:
> Lance, as I stated in a previous reply, I already have contacted the author
> (Rick Parrish) and he asked for a copy of a .log file that I can't seem to locate on either of my two machines.

Topic: 5164 Message: 5245

The author has confirmed the BCD396XT does not work as a voice follower

Clark
---
per the following message from his group:

I am doing triage this weekend. I've a list of about 30+ items - fixes and enhancements - including the one below. I confirmed an issue reported by Clark where voice following with a BCD396XT does not work. It sends the command expected by the BCD396T. Apparently with the last round of Uniden fixes I failed to ask if anyone was using voice following with this model. Almost everyone was using their radio to decode.

Being new at this, I'm confused. What is meant by "voice follower"? I'm assuming a "regular" scanner is a voice follower, but I could be wrong.

Thanks
Glenn

Topic: 5164 Message: 5248

When you use a program such as Unitrunker, it takes over the trunking functions. As such, you need a Data Scanner to provide the PC with the trunking control channel data, and a Voice Scanner (AKA Voice Follower) for the PC to control to hear the talkgroups the PC is responding to.

Why would anyone want to do this over the built-in trunking? PC programs that use two scanners are always monitoring the control channel and can not only log everything found/heard there, but can also define priorities to any trunking system for any talkgroups. This is not possible with a single scanner.

Messages are not 'picked' other than to moderate new members to keep spam, flames, trash talk, and off-topic messages off the list. I've never found anyone who wants to receive those.

I belong to several scanner lists that allow everything through, and they are often destroyed by the above type messages. As I don't wish to see my lists so destroyed, preventative measures have been taken. It would 'suck' more for a list to become useless.

Spam is an email posted to advertise something or promote something. It is often sent to many email addresses and usually has nothing to do with the list topic if sent to a list. Many times these are scams intended to part people from their money.

Flames are messages/posts intended to criticize or attack a person. This is not to be confused with disagreeing with a point someone has made. Flames attack the person, and not an idea. For example if someone were to say someone else is full of (feces).

Trash talk is criticism of something without any factual basis or example of the criticism.

5256. help needed using UBC-RH96 with BCD396XT

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-06 05:17:51 UTC
From: dsa_sa_98
Topic: 5256 Message: 5256

Hi all,
I have a UBC-RH96 that came with the original UBCD996T but I now have the BCD996XT and BCD396XT which do not work with the Aust - RH96.

Is there any way of programming / upgrading the UBC-RH96 to work/look like a BC-RH96. The UBC-RH96 will not accept the US software V2 as it looks for the BC-RH96 code from the head.

At this stage I have a RH96 head that is useless with the new handheld scanners in the car.

Any help please,

OldOne

5257. Re: help needed using UBC-RH96 with BCD396XT

Sorry to say but the US and Australian models of the remote head are only compatible with scanners from their respective countries, the firmware in each is different and can not be transferred between the two.

Ebay is your friend!

Andrew

5258. X2-TDMA (Future P25 Phase II) Support

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-12 19:51:06 UTC
From: Kim Wells
Topic: 5258 Message: 5258

Hello to the Groups,

Has there been any hint as to if or when Uniden will have Motorola X2-TDMA (Future P25 Phase II) Support?

It is in use in Loudoun County, VA & Prince George's County, MD. GRE's PSR-800 scanner is capable.

But, I would prefer a Uniden Scanner.

Kim Wells,
Dowell, MD

I suspect they are waiting until the Phase II spec is complete before adding it. The worst thing you can do is promise something and have it not work. The current X2 systems are subject to modification once the spec is complete.

Well, in reality the spec is done and Motorola already has over 10 contracts for Phase 2 systems that start shipping out this late summer. So if anything, Uniden might be waiting until the systems are already running which would still be no later than fall or winter this year.

Just because they have contracts to provide something does not mean the spec is complete. They had contracts to provide Phase I systems before the P25 spec was complete. They had to update the equipment to make sure it complied once the spec was finished (IF it did not already meet the spec). They sold many of the P25 systems that have P16 control channels as "P25 compliant systems".

Their X2 TDMA solutions may well be Phase II compliant, but they cannot guarantee that yet. The best they can do is sell systems with the provision that they will be compliant with the Phase II spec once it's complete. Despite the fact they are Motorola, they do not always get their way with APCO standards. They wanted P25 to allow for 3600 baud control channels. That didn't happen.

Another fact: Phase II will be TDMA *or* FDMA. GRE has been proven (let's accept the fact that it is for argument's sake) to work on X2 TDMA systems. Will it work on X2 FDMA systems? There are no reports on that yet that I'm aware of. (and there may not be any such systems on the air yet)

So for 396XT owner's is the upgrade path going to entail a firmware update,

or are there changes to the hardware on the implementation side (Motorola) that will require a redesign of the 396XT logic board?

I guess I don't understand what an "X2 FDMA" system is either. The system the GRE is working on is already a brand new X2 TDMA/FDMA system and the current scanners from Uniden and GRE already work on the FDMA part of it, even before the PSR-800 came out. So all scanners work on "X2 FDMA" systems already if I understand what you mean correctly.

Good morning all;

Some key details:

Fact: the control channel format does not change. If you find yourself "stuck" with a phase I radio in a phase 2 world you can still use it for monitoring with programs like Pro96Com and Unitrunker.

X2 vs. Phase 2

X2 uses the half rate vocoder.
Phase 2 uses the half rate vocoder.

If the scanner's on-board vocoder can't be upgraded (or doesn't do full and half rate already) - it's obsolete.

The big difference between X2 and Phase 2 is symbol rate. X2 is 4800. IIRC (from 2007) the symbol rate for phase 2 is 6000. This is effectively a new protocol which means more supporting code in the firmware. There is risk the resulting code exceeds the size of the onboard firmware (eg. won't fit).

In short - too many unknown variables - including the possibility that Uniden and/or GRE decide to introduce new models. Uniden could decide to charge an upgrade fee. GRE will likely introduce a new PSR510/610 models to complement the new 310/410 models introduced last month.

7 or so years ago one proposed approach was a 6.25 kHz wide channel (instead of two slots on a 12.5 kHz wide channel). That's the phase 2 FDMA. It did not become a part of the standard.

The latest info I've heard came from Paul, and even he said there are parts of it that are not yet finalized. I also recall some timetables that indicate that it's still being worked on (including on the APCO web site, and they should know - it's their standard).

You would think that if it's done, there would be equipment that is sold as "P25 Phase II" and not some other label such as "X2 TDMA".

It makes sense that it would be what Motorola wants to call a P25 Phase II system, but can't yet until the standard is finalized. But, that goes against what you said in your last post.

I find it hard to believe that current P25 scanners work on Phase II systems. What is the purpose of Phase II if it's going to be the same as Phase I?

Maybe the scanners are working because they are not using more than one voice path per channel yet, or maybe they work until the second voice path goes active on the same channel.

Everyone;

TDMA was accommodated by adding new control channel messages. Messages that describe TDMA bandplans are different from their FDMA counterparts. A TDMA channel number tells you what frequency and what slot to follow. A strictly phase I radio does not understand these messages.

The '800 is working because it understands these new messages.

I think that's the whole issue Joe. Until there is a P25 APCO stamp on it it's neither compatable nor P25 capable under the P25 standards which includes compatability. I think Unidens doig the smart thing waiting until the specs are complete. Look at all the issues both GRE and Uniden had (and in some cases still have) with the P25 specs that are in use now. Scanners had a heck of a time on both MECA (Indianapolis) and still do in some cases. That system actually has 2 CC's operating at the same time, one for North of I-70 and the other South of I-70. that alone causes headaches for scanners, then throw in SIMULCASTING and it's even worse! The Statewide SAFET system had issues with severe motorboating. Uniden figured it out with the XT's and it's even better on the HP. the motorboating seems to mostly affect Simulcasting again, and it seems in the case of many sites the other issues is timing and/or reception. Honestly with the HP the only motorboating I get is on one site (Henry County) and when a site goes into site trunking. I haven't figured the latter one out yet though.
anyway, my point is that Uniden's waiting for the specs to be completed instead of jumping into it headfirst should pay off in the long run with less "repair" work to get things going and make sure it works on all systems equaly...or as close as possible.

That still doesn't answer Joe's question. just because the scanner can tell what channel it's supposed to listen to doesn't mean it still works properly when the second of the paired channels is active along with the first. what happens then? Does the first channel you were listening to drop out and you get nothing? If that's how it's working then it is kind of useless. Even if it causes intereference it could be pretty bad to listen to.

What you wrote though does explain the reason "Slots" have appeared in the latest version of Unitrunker though :)

If you go to the trouble of (a) adding the half rate vocoder and (b) adding code for the new control messages; why leave out discerning the slots when picking off voice cells to feed to the vocoder?

If anything, skipping unwanted cells is the easy part. The reports (from knowledgeable people) are the '800 is handling X2 correctly now. They hear coherent conversations.

Just to be clear; X2 is not phase 2.

The only questions left are - whether the '800 will do phase 2 when such systems go live - and what's going to be Uniden's response. The total number of X2 systems is very small. The existing X2 systems might be upgraded to proper phase 2 in which case it would be prudent for Uniden to leapfrog X2 in favor of real phase 2.

> What you wrote though does explain the reason "Slots" have appeared in the latest version of Unitrunker though :)

Yes. Watching the draft evolve has allowed me to plan ahead for supporting phase 2._._,___

Joe, Motorola has operational Phase 2 systems right now. The roll out for customers is August. I don't think Motorola would announce a roll out date if they weren't committed to a Phase 2 Standard. They are calling this Phase 2 not X2 TDMA.

"We?ll have commercially available equipment in August,? said Brenda Herold, corporate vice president, Motorola Solutions. ?We?re well along with operational systems in our labs. We?ll have a live system at IWCE". We have not shipped Phase 2 equipment, but we have a number of contracts for equipment for upgrades to Phase 2 or new systems for Phase 2. The rollout will start based on customer schedules as of August this year.?

5275. Re: [BCD396XT] Re: X2-TDMA (Future P25 Phase II) Support

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-14 04:43:03 UTC
From: JETorres
Topic: 5258 Message: 5275

So why is Project25, TIA and many other sources ARE saying basically: "Completed suite of core definition documents directly enabling development of interoperable P25 Phase 2 TDMA equipment"? And Motorola DOES in fact states that they ARE shipping PHASE 2 TDMA Systems by August? Basically, from what I understand, what we or scanners care about, the Common Air Interface for Phase 2 is done.

Here's a couple of links:

From Project25.org itself back in November 2010:

http://www.project25.org/news-a-events/111-p25-phase-w-TDMA-mac-layer-document-approved-for-tia-publication

From Motorola:

http://mediacenter.motorolasolutions.com/Press-Releases/Motorola-Solutions-Continues-to-Lead-the-Way-with-Project-25-Phase-2-TDMA-Trunking-35b6.aspx

To me every indication says that is DONE.

5276. Re: [BCD396XT] Re: X2-TDMA (Future P25 Phase II) Support

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-14 04:54:04 UTC
From: JETorres
Topic: 5258 Message: 5276

The current scanners are working because the control channel is essentially the same for backwards compatibility, so obviously they only decode the FDMA part of the systems. But what's changed have already been explained better by others.

And it has also been explained that GRE PSR-800 can decode the new info on the CC.

From what I understand, when Phase 1 radios transmit on Phase 2/TDMA systems, then the system now keeps a TDMA path AND FDMA counterpart so all radios can communicate regardless. Once only Phase 2 are involved in the transmissions or certain TG, then the system only transmits in TDMA. That of course is an oversimplified explanation.

The system the GRE is working on is already a brand new X2 TDMA/FDMA system and the current scanners from Uniden and GRE already work on the FDMA part of it, even before the PSR-800 came out. So all scanners work on "X2 FDMA" systems already if I understand what you mean correctly.

Topic: 5258 Message: 5277

I suspect they anticipate that Phase II will be released by August.

As for "we have a number of contracts for equipment for upgrades to
Phase 2", I suspect these are the X2 TDMA systems they are talking
about. They just can't say it's Phase II yet. There may be some minor
changes needed, but they wanted to get the foot in the door on the
contracts and "sell Phase II systems" before they could call them that.
They did the same thing with P25 Phase I systems - promising to upgrade
them to the P25 standard once it was released.

As for them being committed to it, I'm sure they are.
I never meant to imply they were not.

It just seems too coincidental that Phase II will allow for a 2-slot
TDMA scheme and X2 TDMA happens to be a 2-slot TDMA scheme.

Joe M.

From: MCH
Topic: 5258 Message: 5278

That first link says exactly what Frank Cardenas said (or relayed): "The physical layer standard was completed in 2009, and the media access control (MAC) layer was completed in 2010."

Combine that with what others, including Paul, are saying and you can see how everyone is 'right'. The core is completed. There are just some minor details that need finished, but they are nothing that cannot be addressed in software/firmware.

So, paraphrasing from the first link:
July 2009: Physical Layer docs completed
November 2010: TDMA MAC docs completed

One could argue that the standard was complete in July 2009, or November 2010, or not yet completed, and be correct. In 2009, even though the Physical Layer was done, that was not the completion of the Phase II standard, nor is the completion of the TDMA MAC. Maybe all the hardware specs are complete, but the Phase II standard is not complete yet as a whole. I think people are seeing press releases of major milestones of part of the standard and reading that as the Phase II standard being complete.

BTW, Project25.org appears to be a group of people interested in P25, but it appears to not be owned or directly affiliated with APCO (who own the P25 standards). APCO's website still has meetings scheduled on P25 development.

And Motorola has been saying they have been leading the way on Phase II since Phase II was in the early planning stages. It is interesting that they cite planned release in August. I'm sure if the standard were done, they would be shipping Phase II systems today (and calling them that).

Not to start yet another issue, but current P25 systems are not really FDMA, as they only carry one conversation per channel. Trunking is not necessarily FDMA even though the system as a whole does support multiple user access

True FDMA will carry more than one user on the same channel - divided in the frequency domain (the frequency is split in two or more and each user has full-time use of their part).

Conversely, TDMA systems will carry multiple users on the same channel divided in the time domain (they are sharing the entire channel, but only a fraction at a time).

With a true FDMA or TDMA system, you will have channels AND SLOTS (which indicate which part of the channel a user is assigned).

So you're saying "real" FDMA requires all the channels to be adjacent?

No. The channels can be anywhere.
(although in theory they could be adjacent just as they could be
adjacent on an any trunking system)

But, the slots on each channel are, by definition, adjacent.
That's where the 'multiple access' comes in - each channel
can be used by more than one user.

For a two-slot FDMA system, the channel is divided in two.
For four-slot FDMA systems, it is divided in four, Etc.

The key is that FDMA systems have multiple users on each transmitted
frequency bandwidth (AKA channel), or CAN have that if needed.

Joe M.

Topic: 5258 Message: 5283

Multiple access refers to how multiple users are able to communicate. FDMA solves this by giving each user a separate frequency. TDMA solves this by giving each user a different time slot. CDMA/CSMA solves this by forcing all but one party to hush.

You can combine FDMA with TDMA which is what P25 TDMA is. Each TDMA channel operates on a distinct frequency and timeslot.

In your quote above, notice how you're using the word channel in two different meanings. In the first paragraph; it's an RF channel. In the second paragraph, it's a talk path. Most folks use the latter. For the rest of this email, I'll try to avoid this ambiguity.

In FDMA slots *are* frequencies. Your four "slot" FDMA is a four frequency FDMA system. Each "slot" operates on a different frequency. The spacing and proximity of these frequencies (kHz or MHz) is irrelevant (so long as they don't overlap).

You could take a frequency licensed for 25khz wide bandwidth and split it up into two separate 12.5 kHz frequencies or use two frequencies licensed for 12.5 kHz bandwidth that happen to be adjacent or many MHz apart.

In either example you have a two *channel* FDMA system.

To recap

FDMA = frequency slots
TDMA = time slots if I sound a bit slotty today)_._,___

It looks like you are making a common mistake - substituting FDMA for
Trunked. They are not the same thing.

Trunked simply means that the system transmits on multiple frequencies,
assigned by the controller. This can be combined with FDMA or TDMA or
CDMA or analog signals.

FDMA means each frequency can be split among multiple users.

No. I meant each exactly the same - a transmitted RF frequency.

I will grant you that the term 'channel' can mean any number of things
which is why I made it more specific in the second paragraph.

Here is a website that explains FDMA vs TDMA pretty well.
It has some graphics which make it easier to understand:
<<<http://acts.ing.uniroma1.it/courses/comelet/Slides/20071217_TEL_lecture_2.pdf>>>

> In FDMA slots *are* frequencies. Your four "slot" FDMA is a four frequency FDMA system. Each "slot" operates on a different frequency. The spacing and proximity of these frequencies (kHz or MHz) is irrelevant (so long as they don't overlap).

And that is my point. The slots are frequencies, but they are all on a
single transmitter.

A 5-channel, trunked, 2-slot FDMA system has the capacity for 8 users to
talk at the same time. (4 voice channels x 2 slots per channel)

A 5-channel, trunked, 2-slot TDMA system has the capacity for 8 users to
talk at the same time. (4 voice channels x 2 slots per channel)

> You could take a frequency licensed for 25khz wide bandwidth and split it up into two separate 12.5 kHz frequencies or use two frequencies licensed for 12.5 kHz bandwidth that happen to be adjacent or many MHz apart.

Your first example is 2-slot FDMA.
Your second is something other than FDMA.

The URL above explains it pretty well.

The key is that multiple users can use the same frequency at the same time in a FDMA or TDMA system. You can add trunking on top of this, too.

You can also have an X-slot TDMA or FDMA conventional frequency.

Joe M.

People often attack the person when they can't attack the facts.

It's not splitting hairs - it's called education. There are a lot of
people out there who don't know the difference between trunked and FDMA,
or digital and encrypted. In each case, the first is usually used in
conjunction with the second, but it does not follow that they mean the
same things.

5288. FDMA

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-14 21:10:14 UTC
From: Yuni T. Runker
Topic: 5258 Message: 5288

No sir. FDMA means each channel gets a separate frequency. Trunking adds an extra layer - but that's not what we're talking about.

Multiple users can share the same channel so long as only one transmits. Let's use "talk path" to be clear.

Concurrent talk paths requires separate frequencies.

For others reading this; don't take my word - see for yourself.

Read the wikipedia definition and take a look here:

http://www.wirelesscommunication.nl/reference/chaptr04/multi/fdma.htm

"Early cellular telephony mostly used FDMA analogue transmission. Walkie talkies and mobile networks for closed user groups often use FDMA."
"Another example of FDMA is AM or FM radio broadcasting, where each station has its own channel."

Motorola's use of FDMA agrees with this ...

http://www.motorola.com/web/Business/_Images/_Static%20Files/ASTRO_25_TDMA_Solution_Brief_304%20FINAL.pdf

Read "sharing the channel" ...

http://web.mit.edu/6.02/www/f2006/handouts/net_L4.pdf

Topic: 5258 Message: 5289

The origins of FDMA and TDMA were the same - with the only difference being the time domain or the frequency domain. Both were means of dividing a transmitted frequency among several users (hence "Multiple Access")

In recent times, FDMA has been twisted to mean something different (usually a more fancy term for "trunking") while TDMA seems to have kept its original meaning (well, so far).

In your third URL (MIT), they state that FDMA is dividing the frequency channel into subbands. While 'subbands' is a new term, it is generally accurate and note that they specify the CHANNEL is divided, not the system as a whole. Channel is the same thing as a Frequency Bandwidth (the term I used before) and comes from one transmitter. I actually used the term channel before as well, but as pointed out it can be misinterpreted. That *is* a great source of information on various communications modes. But again, it emphasizes that it is the *channel* that is divided.

As for the other points in other URLs, AM broadcasting is not FDMA, as there is only one user per frequency (ignoring geographical separation). FM Broadcasting could be considered FDMA because there are subcarriers that let multiple users use the same transmitter (trying to avoid the use of 'channel' here). These were often used by the Muzak (sp) people for ad-free music transmission.

SDMA (Space Division Multiple Access) is a new term to me, but I guess it is accurate as well.

With respect to Motorola's brief, they show an example of "FDMA" where there is only one user per channel. This is not how the term FDMA was originally meant, but it does how my point of how the term has been twisted. They are simply showing P25 TRUNKING, but not FDMA. If it was FDMA, it would have more than one user slot per channel. That really looks like some advertising hype in my opinion. Motorola is really good for making things sound twice as complex as they are.

If only one user can transmit at a time on a channel, where is the "Multiple Access"? That does not agree with the URL I posted OR the MIT URL you posted.

In your first URL, they are just plain wrong. It's not that each user has their own frequency, as that is simply trunking (or analog systems, for that matter), and there is no multiple access on the channel. One user per channel is not FDMA or TDMA or (anything)DMA.

With some of those interpretations in the URLs you gave, a community repeater (one with multiple users - usually employing multiple PLs) is a TDMA system, as they are all sharing the same frequency at different times. Sounds correct, doesn't it? But, community repeaters do not employ TDMA. They are simply conventional, analog, repeaters.

Likewise, a trunked system is not employing FDMA if only one user can use a channel (transmitter/frequency) at a given time.

Both TDMA and FDMA allow a channel to be ACCESSEDed by MULTIPLE users at the same time by DIVIDing it in the TIME or FREQUENCY domains.
(caps used to show the exact terms used in each acronym)

That's a 9 channel system. Each FDMA slot is a frequency is a channel. 8 voice channels plus 1 control is 9 channels.

>

We're talking only FDMA here; trunking and TDMA are additional layers. I'm focusing on your claims to FDMA.

There. That's where we disagree. Let's focus on that. No talking around the disagreement. Let's make it even simpler (next email).

Yes, it does - by definition it does. That's what FDMA is - multiple users on a frequency. Just as TDMA is the same thing. The only difference is that one transmitter is divided in frequency while the other is divided in time (usually milliseconds or faster just so we are clear).

Where did it come from? Read the URL I posted or the one from MIT that you posted. I'll quote from the one you posted: "Frequency Division Multiple Access: Divide frequency channel into subbands".

If you expand it to multiple transmitters, that is TRUNKED which I think we agree is a different additional concept/scheme (which can be combined with FDMA, TDMA, digital, or any other communications mode)

>> A 5-channel, trunked, 2-slot FDMA system has the capacity for 8 users to
>> talk at the same time. (4 voice channels x 2 slots per channel)
>>
>
> That's a 9 channel system. Each FDMA slot is a frequency is a channel. 8 voice channels plus 1 control is 9 channels.

Here we go again with channels. Granted, it could be called a 9-channel system since there are 9 slots (one double-width control slot and 8 voice slots), but let's get away from channels since you end up with:

There are 5 channels. One is dedicated to the control channel. The other four channels each have two channels per channel.

Meaning:

There are 5 channels (transmitters). One is dedicated to the control channel (transmitter or slot - same difference here). The other four channels (transmitters) each have two channels (slots) per channel (transmitter).

May as well call them all marklars. (reference to South Park)

That's why I said (and will further clarify here) there is capacity for
8 simultaneous users. (4 voice transmitters x 2 slots per transmitter)

>> A 5-channel, trunked, 2-slot TDMA system has the capacity for 8 users to
>> talk at the same time. (4 voice channels x 2 slots per channel)
>>
>
> We're talking only FDMA here; trunking and TDMA are additional layers. I'm focusing on
your claims to FDMA.

Agreed that trunking is additional. Let's just talk about a single
frequency if that makes it more clear. (and it should)

I also agree that you can have a FDMA AND TDMA frequency, but then
things are really getting complicated.

>>> You could take a frequency licensed for 25khz wide bandwidth and split it up into two
separate 12.5 kHz frequencies or use two frequencies licensed for 12.5 kHz bandwidth that
happen to be adjacent or many MHz apart.
>> Your first example is 2-slot FDMA.
>> Your second is something other than FDMA.
>>
>
> There. That's where we disagree. Let's focus on that. No talking around the disagreement.
Let's make it even simpler (next email).

Your first part is exactly correct: The channel is SPLIT into two. That
is two-slot FDMA. If it's split into four, that's four-slot FDMA.

Can we agree on this statement below?:
A transmitter on which only one user
can communicate is neither FDMA nor TDMA.
(and is in fact not using multiple access at all)

Agree or disagree?

Joe M.

Slots are channels, right? You agreed to that earlier. FDMA doesnt divide a wide RF channel into narrower ones. It divides a chunk of bandwidth into discrete RF channels - they may be adjacent or not. That chunk of spectrum may span kilohertz or megahertz. The system may use all possible channels or a sparse scattered few - or one. The FCC licensing system is all about enforcing FDMA use. They're not giving out "spark gap" DC to daylight licenses.

This discussion isn't about trunking or cellular or TDMA. It's about FDMA. Those are additional layers worthy a separate thread of discussion.

You said the meaning of FDMA became twisted over time. When? That linked example was from the 1990's. Seems like this simpler definition has been around for a while.

I'll get to the links you describe in a moment. If you could specifically quote something to back up your claim, that would be awesome.

I agreed that you could call a slot a channel. You could also call it a voice path. But, calling it a channel is the worst term of the three since you can call so many things a "channel".

A 'channel' is (with respect to this discussion):
A FDMA slot
A TDMA slot
An RF frequency
The transmitter number in a trunked system
or many more things...

We are lucky 'slot' has not been so contorted
(yet) as to mean more than one thing.

But, let's try to avoid the term 'channel' if we can
since it can mean enough things to make it worthless.

>
FDMA doesnt divide a wide RF channel into narrower ones. It divides a chunk of bandwidth into discrete RF channels - they may be adjacent or not. That chunk of spectrum may span kilohertz or megahertz. The system may use all possible channels or a sparse scattered few - or one. The FCC licensing system is all about enforcing FDMA use. They're not giving out "spark gap" DC to daylight licenses.

Using that definition, the entire spectrum and all its users are FDMA. I don't agree that is an accurate definition.

FDMA is a scheme that divides a transmitted frequency into several so more than one user can access it at the same time.

When you deal with more than one transmitted frequency, it's called a Trunking or Spread Spectrum. Both TDMA and FDMA can be used on a single frequency.

> This discussion isn't about trunking or cellular or TDMA. It's about FDMA. Those are additional layers worthy a separate thread of discussion.

True, but TDMA and FDMA are very closely related with the only distinction being how the split is made - in the Time domain or in the Frequency domain respectively.

> You said the meaning of FDMA became twisted over time. When? That linked example was from the 1990's. Seems like this simpler definition has been around for a while.

Yes, it has been around for a while. That doesn't make it right. Even popularity does not make it right. When did it happen? I don't know. But, many people are calling every trunk system FDMA.

Heck, above you were referencing a bandplan as being an FDMA scheme. While it can be thought of that way, that is different than the FDMA mode of operation. The bandplan is based on divided frequencies among multiple users, but each user is using different transmitters, so they are not using the FDMA mode. Most are using conventional analog. If everyone used the same transmitter and had their own individual frequencies, that would be one huge FDMA system.

A satellite is a good example of an FDMA transmitter. Each one has many users sharing the same transmitter, but each has their own frequency subband (using MIT's term). It's actually a big repeater, too, but repeated is again an additional layer. For the moment, let's ignore the receiver and the fact it's repeated.

> I'll get to the links you describe in a moment. If you could specifically quote something to back up your claim, that would be awesome.

The URL I posted and the MIT URL you posted. I quoted yours in my last post. The one I posted also shows several graphical examples of FDMA which I will try to recreate in ASCII here:

```
||slot1|slot2|slot3|slot4|slot5|slot6|slot7|slot8|...|slotX||
<----------------- Transmitter Bandwidth ---------...------->
```

That is FDMA. It uses a single transmitter (it can use more than one, but we are ignoring trunking to make it simple)

The slots are divided in the frequency domain.

It has a *minimum* of 2 slots.

By contrast, TDMA is the same thing only replace "Transmitter Bandwidth" with "Time". I only state this to show how closely FDMA and TDMA are related.

5295. External speaker for 396XT

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-14 23:47:34 UTC
From: BDR431@aol.com
Topic: 5295 Message: 5295

Back on Aug. 25, 2010, list member Lance Star posted:
<<I noticed on my 396XT that when I plug in an external speaker. The audio is not
significantly louder than the internal speaker. Is there some design change in
the audio to prevent hearing damage through ear buds, or do I have an issue
with the audio output via the ext. jack on this radio?

Thanks.>>

The replies appeared to come to a consensus that an amplified speaker might do the job.

I checked the Scanner Master site, and found only one model of amplified speaker - Watson SP-180A 4inch.

Have any of the list members tried the Watson SP-180A or another amplified speaker? What were your results? Any preference on make/brand of speaker?

Brian Riley

Thank you! Yes channel is overloaded with too many meanings. The paradigms are too close to safely convey meaning. Slot normally comes up in TDMA so I'm content to let slot mean timeslot.

"Slice" is a nice term for FDMA.

What most folks call TDMA is really TDMA layered on top of FDMA (the wikipedia page affirms this). Note that these acronyms are not limited to RF. They apply to wireline and copper telecom. I'm digressing, back on point with FDMA.

Awesome ASCII art. I was looking for sentences. I understand your claim and I think you understand my counter claim. Repeating them won't resolve this.

Maybe this will help. What you are calling FDMA is more precisely FDM. FDM is a form of FDMA like a chevy is a kind of automobile.

You mean term for the FDMA slots, correct? The correct term is still slots - they are just frequency slots rather than time slots. That is, unless the meaning of 'slot' is changing too. Well, I guess it would have to since the meaning of FDMA is being changed.

>> FDMA is a scheme that divides a transmitted frequency into several so
>> more than one user can access it at the same time.
>>
>
> But they aren't sharing one frequency. They're on separate frequencies. FDMA topology isn't tied to transmitter architecture.

By definition, they are sharing the same frequency bandwidth - it's just slit between (or among) them. Granted, not the exact same frequency, but the same transmitter. If the transmitter is on 850.0000 MHz, and it's using 25 kHz bandwidth, and it's 2-slice FDMA, one user is using 849.99375 MHz (center) and the other is using 850.00625 MHz (center).

If they are on distinct, separate frequencies, that is trunking. Or at least that's what it's been called for the last 25 years.

TDMA layered on top of trunking, maybe. TDMA layered with FDMA is pretty rare, but is covered under both the MIT URL and the one I posted. I haven't heard of any Land Mobile systems that are using both.

>> Yes, it has been around for a while. That doesn't make it right. Even

> Perhaps you've been outvoted. I remember when "keyboarding" became a verb. Drove me nuts.

Likely true, but it's always nice for things to mean what they say. I remember when trunking systems were called trunking systems and not "FDMA". Maybe we can change the meaning of TDMA, too. I would prefer my community repeater to be called a TDMA system so I won't have to update it by 2013. Think the FCC will go along with the change in definition? Maybe if we get enough people to call community repeaters TDMA? That way, we can keep the same bandwidth equipment, as TDMA is one of the alternatives to using more narrowbanded equipment.

>> For the moment, let's ignore the
>> receiver and the fact it's repeated.
>>
>>> I'll get to the links you describe in a moment. If you could specifically quote something to back up your claim, that would be awesome.
>> The URL I posted and the MIT URL you posted. I quoted yours in my last post. The one I posted also shows several graphical examples of FDMA which I will try to recreate in ASCII here:
>>
>> ||slot1|slot2|slot3|slot4|slot5|slot6|slot7|slot8|...|slotX||
>> <----------------- Transmitter Bandwidth ---------...-------->
>>
>> That is FDMA. It uses a single transmitter (it can use more
>> than one, but we are ignoring trunking to make it simple)
>>
> Awesome ASCII art. I was looking for sentences. I understand your claim and I think you understand my counter claim. Repeating them won't resolve this.
>
> Maybe this will help. What you are calling FDMA is more precisely FDM. FDM is a form of FDMA like a chevy is a kind of automobile.

If you read the MIT URL which you posted, it's saying the same thing.
The channel (transmitter) is divided into slots in the frequency domain.

It's ironic to have a "FDMA" transmitter that is neither dividing the frequency nor allowing multiple access, but is being granted that status

in name. I guess the statement "that depends on the meaning of 'is' is" is starting to make more sense to me now. Maybe is means isn't now.

What does FDM stand for?

Also, what do you now call a single-frequency FDMA transmitter if you accept that a trunked system is "the new FDMA"?

Maybe we can change the definition of TDMA to mean a community repeater.

Just to clarify what you are saying:
Traditional trunking is now called FDMA
Traditional FDMA is now called FDM

I wonder what TDMA will mean in 5 years... Oh yea - community repeater. Maybe we can use the term "trunking" to mean a frequency that is divided in the time domain. Rather than PL, my users are using talkgroups of 100.0, 151.4, Etc.

Once you accept changes in the meanings of words, the words become meaningless.

Joe M.

5300. Re: [BCD396XT] External speaker for 396XT

Yahoo group: BCD396XT (2011 — 2014)

From: Rich Carlson
Topic: 5295 Message: 5300

The 396XT has (as many HH Scanners do) a limiting circuit to prevent
excessive volume from earphones, thus using the earphone jack for an
un-amplified external speaker doesn't help much.

You can bypass the limiting circuit by shorting the "ring" of the
earphone jack to the ground of the antenna connection using a piece of
fine wire. Don't do this when using earbuds but it works well for
external speakers.

This will likely increase battery drain, perhaps by a lot, but if you
are using external power it shouldn't be an issue.

Gentlemen,

Let's all remember that anybody can sit down at the keyboard and create a wiki page off the top of their head and so any wiki article is only one author's (or multiple authors') *interpretation* of the facts, I'm not saying any such article is or isn't accurate but as a source of information you have to bear in mind the above?

That said, I can see we are starting to go around in circles with this thread and I don't think either party is likely to change the view of the other so maybe we should just agree to disagree?

And thanks to both for all the links, some very interesting reading indeed!

Andrew

Yeah, I get those emails too. Some people keep getting mislead by the "these and that documents still not finished" thing. You know what, P25 Phase 1 STILL has many things unfinished. The ISSI part considered important and so awaited by many just got done recently too. Many things should've been completed on the P25 suite standard over 10 years ago! That does not mean what's done on the standard already cannot be used and it's been in use. ESPECIALLY for our scanning purposes, since we mostly care about the voice interface part. A comparable situation is with the ever developing 802.11 wireless standard, we've using it for how long and so many things still in "draft". Can you imagine if manufacturers would've taken the stance of some and cross their arms and say they're going to wait until is completed 100% to do anything about it?

Phase 2 TDMA has been completed enough for our hobby's purpose to get going on it. And people and manufacturers that are still on the fence about it and not already planning, are going to play catch up soon....

Rich,

Have you actually done this on your 396XT?

It will drive a regular 8 ohm external speaker?

Interesting...

heres what I did its cheap and it works GREAT

do you or any one you know have any OLD desktop (486 or pentum II syle) AMPLIFIED speakers?

 i had 3 sets of them , they are harmon kardon , and how they worked is you plug the output into the soundcard of they then have a 12 v contact power supply, connection, so i took the speaker with the power input made a dapter to the CAR aux, and out a male jack the ear out of the 396xt then i hook it up and keep the XT on 4 volume setting and i turnthe volume up or down on the harmon kardon speaker to what i want and it will BLAZE on high i can drive down the interstate and hear it LOUDLY and CLEARLY in the car

if any one isinterested ill take a couple pictures of the setup either on or off the group if you want the pix emaild to you just email me and ill send em

I dont think anyone was being arrogant just two people stating the facts as they see them. Not everybody looks at a particular picture and sees the same thing. I take the discussion that was going on and that's what it was, a discussion. As a good opportunity for alot of knowledge to reach people who know nothing about these things. Nobody knows what the final specs are yet and nobody is using the equipment yet so I say let these two keep discussing this at length because when people do start using the tdma systems and equipment what was right will be right but we will all have a idea of how it works thanks to the two gentleman that were discussing it. They were educating people on this board like my self who have very little knowledge about phase 2 radio systems. If you have been around this hobby and these forums for almost two decades now(your words not mine) you should already know that knowledge of these things is the only thing that keeps hobbyists as ourselves ahead of the curve when technology is changing. Maybe you know everything but I still have alot to learn and I dont think I would ever care to stop learning about something I enjoy as much as the ham radio and scanning hobbies. In twenty years there will be even more advanced systems than we are dealing with now and I sure hope that people are still having discussions like this then because when we all shut our mouths nobody learns anything.

Just my 2 cents, have a good night gentleman,

Robert Klamp

Hello Joe;

--- On Mon, 3/14/11, MCH <mch@...> wrote:
By definition, they are sharing the same frequency bandwidth - it's just slit between (or among) them. Granted, not the exact same frequency, but the same transmitter.

Invoking your own definition to argue for it is just circular logic.

If they are on distinct, separate frequencies, that is trunking. Or at
least that's what it's been called for the last 25 years.

I'm sure you can think of non-trunking counter examples.

If you read the MIT URL which you posted, it's saying the same thing.
The channel (transmitter) is divided into slots in the frequency domain.

The MIT page does refer to dividing a channel into sub-channels. We've already agreed that the word channel is an overloaded, unreliable term. The MIT link does not say "transmitter" or place any such constraint on the equipment. Most of it's examples are cellular networks.

It's ironic to have a "FDMA" transmitter that is neither dividing the frequency nor
allowing multiple access, but is being granted that status in name.

It allows multiple access to the same band by limiting its emission to a specific frequency or set of frequencies. Other transmitters can do the same provided they use different disjoint frequencies. Again, see how the term is applied to cable modems and other non-RF applications.

What does FDM stand for?

http://en.wikipedia.org/wiki/Frequency-division_multiplexing

Quote from the article:

"FDMA is the traditional way of separating radio signals from different transmitters."

That's your one-transmitter handling multiple carriers. If FDMA meant what you claim, the industry would not have needed to invent another acronym.

Just to clarify what you are saying:
Traditional trunking is now called FDMA
Traditional FDMA is now called FDM

I've already said this discussion isn't about trunking. I know you're being sarcastic.

Once you accept changes in the meanings of words, the words become meaningless.

Have faith Joe.

But, doing that can increase the chance of hearing damage should you use
an earphone in the future. Best bet is to just use an amplified external
speaker.

Wow. Without the quotes, it's not easy to follow the text, but...

My definition has not changed from the beginning of the thread. I never said they were on the exact same frequency (which would not be possible), but they do use the same transmitter. Again, satellites are an excellent example of true FDMA - they have one transmitter which has several user slots. The frequency bandwidth of the transmitter is shared among many users. That's your non-trunking counter-example.

As for FDM, there is no practical difference between multiplexing and multiple access. They mean the same thing, as multiplexing is the combining of more than one signal on the same 'line' or transmitter. Well, unless the meaning of multiplexing changed.

Yes, the examples at the bottom of my last post were meant mostly as sarcasm, but if you accept that FDMA can mean multiple users on multiple transmitters, every transmitter is FDMA. This is based on your bandplan based frequency division. Your local FD who uses 33.92 MHz is using a channel among other users who are sharing the same band and can use it at the same time. Therefore, a simplex, analog, Low Band transmitter is FDMA. No, no sarcasm this time. If you accept FDMA can be comprised of multiple transmitters, you cannot deny that everything is FDMA.

You could also argue that everything is TDMA since different users can use a frequency at different times.

I can accept the fact that FDMA and TDMA have been twisted to the point that they are meaningless anymore - just like 'channel'. But, that still doesn't mean that I have to accept that the meanings were always the same, or were not vastly different in the past when they meant what the words say. I think they were changed just so people could make systems sound more complex so they could get more money from sales. But, that's just a theory. No, I don't care to explore that one.

So, the XT series I guess do already support FDMA and TDMA.
A lot of people will be happy to hear that.

I could not have said it better myself.
You hit the nail absolutely square on the head.

And I do thank Bob/Yuni for the civil discussion. For that matter, I thank everyone save one person who felt attacking was the best course. I'm not going to 'fire back', but I would ask the list members to think about who was more arrogant in that matter.

It was GREAT to have a civil discussion about a heated topic that did not turn into a flame-fest.

Yes, Bob/Yuni and I still disagree, but that's OK, as it WAS the discussion that was beneficial to most list members. As for who is right, I'll let everyone make up their own mind on that. That's just the kind of arrogant SOB I am. ;->

Joe M.

Robert Klamp wrote:

Didn't someone post that they had a working CTSP file in the FILES
section of the group? If you download and study that file, it may show
what is wrong.

There could be a number of things wrong.

What do you mean by "I'm hearing control channels"? Do you mean you can
hear the data? If so, you may have it programmed as a Conventional
system which won't work.

Did you program IDs into your scanner? If not, and if you are in ID SCAN
mode, you won't hear anything. Did you try ID SEARCH mode to see if that
works? That would eliminate any system programming issues.

Is your System Quick Key and Group Quick Key enabled? Are they unlocked
(not locked out)? Same for the channels - make sure they are unlocked.

Did you set it as Moto II or P25?

I programed from Radio Reference.I'm hearing control channels but not
decoding any Id's. I can hear CTSP on my Home Patrol and Pro-106, so I know
it's out there.--- On Tue, 3/15/11, Paul Opitz <pmanu44@...> wrote:

Sorry, but you really need to provide a detailed description of the problem
including how you've programmed the system, what the scanner is doing, etc.

Need two definitions to be of assistance:

1) Define CTSP.
2) Define "trouble."

Yes, I posted a file with working CT State Police.

My design allows you to switch on/off East, West, And Central groups individually.

It is System 6, and West, East and Central groups are 1,2 and 3 respectively.

Dr. Levine also posted a file.

His file is more geared towards switching sites on and off.

Look in the "Files" area.

Lately, I have been using ID Tracker to enter badge numbers that correspond to unit id's, so in ID Tracker, the badge number shows up when the radio keys up. That's a LOT of work and note taking!

The lowest ID I've logged is "40". The highest is "64144".

For instance, Unit ID 51243 is "IC862" (I Car 862).

Phew!

Just realized it's over in the 996 group, and it's a freescan file:

I posted a working CSP only file in this group just now..

I just tested it - it works.

Make sure System 6 is turned on.

5327. Re: External speaker for 396XT

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-15 22:30:41 UTC
From: doctordialtone@att.net
Topic: 5295 Message: 5327

I'm sure it's been covered here somewhere before, but external speakers tend to add a "Thumping" sound.

I overcame this by inserting a transformer across the output.

The secondary feeds the speakers, and it's smooooooth and LOUD with amplified PC speakers.

The 'thumping': Is it just at the beginning when the audio amp is
turning on, or is it continuous throughout the transmission?

5329. Re: External speaker for 396XT

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-16 00:57:19 UTC
From: doctordialtone@att.net
Topic: 5295 Message: 5329

As I recall - at the beginning only - and it can be irritating.

Definitely not throughout.

I just used any transformer I had, in this case a 70Volt Paging speaker transformer. Anything to isolate the output from the speaker.

I put mine inside a tiny plastic bottle and sealed it up.

I've gone thumpless for the past two years

Now, the neighbors can listen along too!

Give the PC speaker thing a try and see if you hear the "thump".

I operate at about a 7 on the volume and control overall volume on the powered PC speakers

5330. Mini Adapter Null Modem for BCD396XT

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-22 05:23:07 UTC
From: itsahobby4me
Topic: 5330 Message: 5330

Trust me, I'm learning from scratch (for the fun of it).
However, regarding the Null Modem Mini Adapter, on the pin end of it, isn't it supposed to have one row of 5 pins and a bottom row of 4 pins?
On my original Scanner Master order I got one with what I figured was a pin missing, there's a hole there for the 4th missing pin.
So I re-ordered and mentioned this.
I've received the same thing. One pin missing in the same place.
I haven't tried hooked anything up yet, haven't had the time.
I'm told I need it for the GPS Accessory Kit which I've got.
To reiterate, both nmma's have the same pin missing. Is this right?
Thanks for your time,
itsahobby (maybe).

Most RS232 communications only uses TXD, RXD, and Ground which are pins
2, 3, and (I forget which one ground is offhand). So, it's not unusual
for some pins to be 'missing'. Try it and see if it works.

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-03-23 14:15:24 UTC
From: Alex
Topic: 5330 Message: 5333

Pin 9 would be the likely missing pin in an RS232 null modem connection (at least that's the missing one on all of my null modem adapters). It's almost never used except with an actual modem (it's the Ring Indicator that lets a modem tell the computer the phone is ringing), just pins 1-8. The minimum three pins needed for communication are pins 2 (receive), 3 (transmit), and 5 (ground).

Sorry about the newbie question.

Is there anyway I can decode AIS info - such as used by http://www.marinetraffic.com/ - with the bcd396xt without having to solder the discriminator tap? any program that could be used with the data output port could decode it?

thanks in advance
bruno

Dude,

There is no reason to break out the soldering iron on a 396XT, and if you did, it's all SMT (surface mount technology).

The radio has output for that in the menu. It's C-Ch out. You would need some kind of software to interpret the raw data coming out of the radio. I have not researched what type analog output form the radio provides. There may be a distinction between what you see on a discriminator tap and what Uniden has labeled C-Ch output.

Many others will comment about this on the group.

Sounds interesting what your doing.

Best of skill...

C-Ch out is an interpreted (text) output. It does not provide "sliced" data. I'm not too familiar with AIS, but it might be possible to decode it from the audio output rather than a disc tap. It all depends on the data format and encoding method.

So, is it just like manually entering the frequency, hook the USB cable to the data port and wait for the data on a terminal program in my PC?

I thought there'd be some kind of configuration needed. I don't have the cable yet, so I can't test it right now...

I don't think it would work out too well for you. First AIS is only on two frequencies and there quick bursts of data so you would have to keep the 396xt on those two frequencies and only those two frequencies, that's a lot of scanner to tie up just for that. Best to get an old scanner off ebay or pawn shop an do the discriminator hook up and use it just for AIS stuff. Best way is to buy an AIS recever and software and do it that way.

Yeah, I figured it wouldn't... and adding the discriminator tap didn't look so difficult, so I gave it a try. Guess what? It works already!

I connected the tap connected to the mic in, installed shipplotter... and I'm getting data from the ships around already.

Thanks guys
Bruno

Yes! The place to solder is clearly marked "DISC" and "GROUND". It was really just opening and soldering. I had to pull the cable through the battery compartment, where there's an opening. I'll try to get a small jack so it looks better than having this P2 cable as a tail...

Bruno,
Would you mind explaining the process. I deleted a couple emails by mistake. I am on the Gulf of Mexico and would love to give that a shot. I am planning to use the BCT15X or the BCD996XT not my 396, since I use the BCT15X, BCD996XT for base units. If it is a distraction to the group, you may email me directly, or here in the group if no one objects?

Thanks,
Walter

Just buy a AIS receiver and have it upload to MarineTraffic.com :)
Use the 396XT for other stuff ;)

AIS-1 - Marine AIS Receiver
Aimed at Marine enthusiasts, the unit will feature a full marine band radio and, at the same time,
full on-board multi channel AIS decoding with Ethernet and USB connectivity.
<http://www.kinetic.co.uk/ais-1.php> (Coming soon).
<http://www.kinetic.co.uk/estore/index.php?_a=viewCat&catId=17>

AISnet is a new AIS receiver for use as an AIS base station at home or in the office.

Brian, Thanks for those links and info. I already follow ACARS (Commercial / Civilian Aircraft), APRS, POCSAG, MCT/MDT (CAD Monitoring), just starting to tinker with Mode-S Military Aircraft, Digital Encryption Decoders, and UniTrunker (found a bit boring). But I had only heard something once before about AIS. I remember when Pop Comm had the article about HF phasing out for Maritime use years ago (I am almost 40 and been using scanners since I was maybe 7 or 8, started with an old Bearcat 8 channel VHF Hi/Low - UHF crystal controlled (The big black metal scanner with the big speaker and 8 red LEDs that would "chase" across the front, with a lock-out / hold switch at each LED). My Grandfather gave me when I was 7 I believe. Then a few years later, he gave me one of the first portable 4 channel crystal controlled scanners, which I actually found the 159.150 MHz crystal for that one when I was cleaning my garage last year, (the old Escambia County, FL Sheriff Channel).
Wow, has radio technology come a LOOONG way since then! I never cease to be amazed at the ever changing technology, but a bit frustrated when they started using systems with ProVoice, etc... at least until that handy, very tiny bit of code was written to decode most of it ;-) But then again, there seems to be a new type of encryption every time one is broken :-(
Anyway, thanks again for the links, I will have to check out AIS, as VHF carries very well here on the Gulf of Mexico. I can hear ship voice channels for hundreds of miles, and aircraft all the way out over the Atlantic Ocean for most of the year, I guess it is the ducting or inversion layers over the warm water here on the Gulf Coast?

Have a great night,
Walter J. - In The Middle of; Pensacola NAS, KPNS, NAS Whiting NSE & NDZ, 2R4, and Eglin AFB / Hurlburt Field

Walter,

Have you tried TRUNK88 for monitoring trunked radio systems?
Personally, I find it to be a little more user-friendly than UniTrunker,
and perhaps not as boring.

P.S. - I actually have one of those old Bearcat IV scanners in my shack!

John

Hi Walter, absolutely no problem.

Here are the steps:

1) Remove 6 black screws from the back of the scanner (2 are in the battery compartment)
2) Remove the casing
3) Remove 6 silver screws that hold the board to the other side of the casing. Again, 2 of the screws were under a black tape next to the speaker.
4) Remove carefully the board from the casing - two wires will be connected to the speakers, you will need to watch that.
5) On the top part, there will be actually two boards connected through a header. Pull them apart.
6) Look at the inner side of the top board. You'll see a few solder discs marked GROUND, DISC, RSSI and another one I can't remember. You need to solder an audio cable to DISC and GROUND.
7) Now you have to find a way to get the cable out of the casing, and also solder a mono p2 jack (or whatever you want) to the other end. This will be your unfiltered audio out. The DISC will be the tip of the p2, GROUND will be the ring.

I passed the cable through the hole in battery compartment. I'd prefer to make a new plug next to the power jack, like this:
http://forums.radioreference.com/uniden-scanners/108388-396t-usb-port-discriminator-blueto oth-mod.html
But I couldn't find the USB jacks.

8) Now just put everything back together, plug the audio cable to your computer, and use either shipplotter or AISmon to decode the data.

Have fun
Bruno

Topic: 5334 Message: 5348

This product was just released this week.

Nice to see more lower cost AIS receivers on the market!

USB-Dongle AIS Receiver - Size of an USB-Stick

MarineGadget Radar - AIS Receiver

New! The lowest priced and most portable AIS receiver in the world!

<http://www.radargadgets.com/>

Just £99 (UK) or €120(EU)!
Includes Post&Packing

A complete Marine AIS receiver in a tiny USB dongle.

* USB connection appears as a simple serial com port compatible with most plotting software
* Output NMEA 0183 VDM messages
* Decodes messages 1,2,3,4,5,9,18,19,21,24
* USB powered (no power cables/supplies to carry or install) *Capable of listening on Channel A(161.975Mhz) or Channel B(162.025Mhz), or alternating between the two.
* USB virtual serial port baud rate 38400
* Antenna input SMA or BNC through supplied adaptor (50R)
* USB extender cable supplied
* Sensitivity -110dBm
* Dimensions only 75x23x8mm

Whether used for shipspotting on the coast or on board a boat the MarineGadget-Radar provides an extremely portable, simple to install (powered over USB and no USB to serial adaptors) and low cost AIS receiver.

Requires a marine/VHF antenna with BNC or SMA connection and a PC with USB.

Range is limited by line of sight (except during troposphere ducting conditions), the relatively low power of ship transponders and the height and gain of your antenna. Typical range on on the coast with a low level antenna 12Nm, on an elevated antenna position 20-50Nm. 250Nm+ under the right ducting conditions.

DPD Productions AIS antennas available:
<http://www.dpdproductions.com/page_marine.html>

Walter, what program and how do you follow MDT CAD Monitoring.
Many years ago I used (for Los Angeles City fire)a Windows program (I think it was MDT Mon) but it doesn't work with the format now used by many agencies.

Several local counties simulcast / multicast the CAD info on a one way paging protocol system also. So using POC32 V 2.07 (Pocsag Protocol monitor), I am able to use an old Radio Shack "Legacy" scanner (the kind where you actually programmed by the set number of channels). And I put the 3 Pocsag frequencies in and ONLY, scan those frequencies with all delays turned off, and get a real-time / very near real-time scrolling view of the MDT in the Cars/EMS units/Fire Units, as well as special announcements, notes, instant messages from car to car, etc....
It can also be done using Smart CAD (locally know as Smart Cop, written by a software company right here in Pensacola, FL), and a radio that will follow the 800 MHz data stream. As long as you set the software to a demo mode, or just open receive, it does not need to acknowledge the system (transmit back any data packets). And there you have it ;-) Even get to see all the juicy comments between male and female Public Servants (married or not!), so you know who is making those midnight rendezvous, who is actually sitting behind the local hardware store just running random tags they wrote down before going to "sit out" a few hours on the shift (yes, that really happens). Also got the scoop right "from the horse's mouth", of racial slurs, both from white and black officers (thinking no one is seeing the "private messages they send each other!). And you can save the data too! So if one wanted to totally break a department up and cause the largest scandals since Watergate, it could be done!
Hope you enjoyed learning about that. It is really simple to do, give it a try if those methods are used in your area.

Happy Scanning!
Walter J. - In The Middle of; Pensacola NAS, KPNS, NAS Whiting KNSE & KNDZ, 2R4, and Eglin AFB / Hurlburt Field

I love the MarineGadget Radar - "AIS Receiver New! The lowest priced and most portable AIS receiver in the world!". That is the best type of receiver / decoder / dongle, all-in-one I have seen. I wonder what the £99 (UK) or €120(EU) would actually be after conversion to US Dollars and Shipping from the UK or Europe?
I would much prefer to pay it though, that to open my still under warranty scanner(s) and risk killing a $500 radio!

I appreciate all the info, Bruno and Brian. You guys have been awesome help! So I will be able to "watch", ACARS, Mode-S, and AIS before long with just the 2 base scanners and the MarineGadget Radar dongle.

Thanks a bunch again!
Walter J. - In The Middle of; Pensacola NAS, KPNS, NAS Whiting KNSE & KNDZ, 2R4, and Eglin AFB / Hurlburt Field

No, the frequency bands are hard coded into the radio's CPU.

I thought so, but I also worked with one of the local agencies for many years, I was a Major over Communications. When I showed our Chief of Communications (Over all County Radio Systems), his exact words were, "We put it out on the air, it becomes public information just like when we receive an email from a citizen asking an official question". So he knows it is done, I also had made him aware that there was a local scanner club (in the late 90's - around 2001), that was actually posting the decoded text on a BBS system. The only change the Chief of Comms made, was he had everyone stop putting passwords, alarm, door, gate, and other codes as to prevent someone from using the info to burglarize a building where fire or deputies are dispatched, they give the address and key location, alarm code,etc.. Other than that, he pretty much does not care.
I know I have sent my share of "private" pages and messages over the system many times, even for a year or so before I knew it was so easy to decode! So I am sure one of those "boys" has an old CD-ROM or floppy still out there somewhere with my dirty laundry on it too ;-)
Also, I know many of the people on the system, they know it is also watched at the source by their Captains (because of harsh, cursing pages, racial pages, etc that have been sent to people in the past, so if they even drop the "F Bomb" on the message system or over the Zetron Paging system, they will be called into an office that day/night and get their rear handed to them!
Anyway, it is no secret, at least here, even deputies, fire fighters, emts, even county road guys are know to open the ole poc32 and monitor, so I do care that anyone know I do check out the system on a basis of several times a week. But I do not go tell "Bob" that "Jim" is talking smack about him behind his back, etc... I use discretion, as do most of the users on the system, as it is also a tool for the job too.

Thanks for the tip and Happy Scanning!

Not just technically illegal, but literally
illegal in the USA per the ECPA as amended in 1994.

That's not the FCC's view. In 1986 they passed the ECPA which made
Cellular illegal to receive. In 1994, they expanded the ECPA to include
Cordless, paging, STL, and some other frequency types.

So, despite the fact they are transmitted over
public airwaves, they are not legal to receive.

To rephrase this a bit, it's not illegal to receive it, it is however illegal to decode pagers, MDT's and so forth. It is illegal to monitor things like cordless phones even though they are in the clear. I'm still at a loss why the OP openly admits in a public forum to decoding this stuff, that's Federal Time! There are however provisions for law enforcement to be able to monitor these transmissions for investigations but that's the ONLY exception to the law.

Well, it doesn't say it's illegal to decode, either, if we are going to pick nits. It says it's illegal to "intentionally intercept" it.

For all practical purposes, that means receive in the case of audible communications or decode in the case of data communications.

And there are a ton of exceptions in addition to Law Enforcement. Most people do not qualify under any exemption unless their job involves communications services.

Basically, the ECPA makes everything illegal to intercept, then exempts some services such as Business, Industrial, Public Safety, Ham, and some others.

Subject: Re: [BCD396XT] Re: marine AIS and BCD396XT

Well, it doesn't say it's illegal to decode, either, if we are going to pick nits. It says it's illegal to "intentionally intercept" it.

For all practical purposes, that means receive in the case of audible communications or decode in the case of data communications.

And there are a ton of exceptions in addition to Law Enforcement. Most people do not qualify under any exemption unless their job involves communications services.

Basically, the ECPA makes everything illegal to intercept, then exempts some services such as Business, Industrial, Public Safety, Ham, and some others.

Why illegal to decode mdt, i dont think they are encrypted unless the data goes over ssh and/or vpn.

Well for one, I do not always have the PC tied up decoding stuff, so if any given moment I was "raided", they would not find anything unlawful going on. Second, It is ONLY "Federal Time", if you are caught, prosecuted, lose and are CONVICTED! Again, at any given period in time, I do not have the equipment even put together, and a PC and a scanner is not unlawful for me to have, so again, "they" would not find anything, and I could then litigate against "them", for unlawful search from a simple post I could have "made up", to post in an open forum, as there is not one soul in this forum or that will read this forum, and say they have ever seen me decode anything!
So it is all a matter of interpretation of facts, not hearsay that one write in an open forum. But I could walk through Disney World and find probably 100 people easy using GMRS "bubble pack" radios with no license, which is just as great of offense, or if you interpret it a few different ways, a greater offense? It is all relative, and what does it matter if no one is causing interference, harm, or using the information to commit a crime? I have an attorney / family member that specializes in patents and media (like broadcast), and is very knowledgeable about the laws, and agrees with what I just wrote (the very reason I wrote this much later, as to get REAL legal input).

Let's please end the thread about:
"it's not illegal unless you get caught".

It's illegal - period.

You simply don't face the penalty if you don't get caught.

Because the ECPA says it's illegal, and that’s the plain short version of
it. But do you really want some slimy scammer
getting your SS# full name & DOB when a cop runs your info? He just cleaned
out your bank account and
your family is getting removed from your home because you don't own it any
more. Need I say more?

Yes, all legal... on ham frequencies. But, intercepting public paging frequencies is not legal. So, it depends where you use it.

Joe,
I was just going to mention the same thing you covered in the last paragraph of that email below. And ask, is that why so many states make mobile scanner unlawful? I know it is illegal in FL to have a scanner in your vehicle, unless, you are in Public Safety, currently licensed Ham Operator, and a few other exceptions?
I had always understood that you were not supposed to mention what you hear on a scanner, yet the media uses scanner just for that purpose? I am guessing it is just a matter of who, why and how one (FCC or local Enforcement), wishes to enforce the laws and ECPA?

First, there are not that many states that ban scanners, but there are some - about 4 or 5 I can think of offhand.

FL has only those two exceptions, I think. It's one of the most ridiculous laws, as there is no reason to ban scanners in public places (which is part of what that law does). On top of that, it even makes it illegal for UPS (or any other delivery service) to have it in their vehicle. The law does not specify powered or not. Like I said - ridiculous.

Yes, enforcement is often lax, hence the recent topic about whether it's "really illegal" or not.

The Media is often using scanners to alert them to incidents, but reporting what they find on the scene or via phone interviews, so they may not be in violation of the ECPA. Hence, that's likely why enforcement against them is so lax. Besides, they are doing their job. In some places with encrypted systems, they are even provided radios with encryption in them to monitor the channels.

smile This will be my one and only post on this (and technically, this topic shouldn't be on this group anyway)...

I'm sorry Walter, your attorney is mistaken (attorneys are fallible, you know LOL). It is illegal to decode (decode being the keyword, not capture) the transmissions. Contrary to your friends in law enforcement, who clearly don't know the law, I do work with law enforcement and have for over 16 years. And I do know the law on decoding MDTs and the like...you cannot, as a citizen, do it legally. It's against Federal law. Capturing coded transmission is fine, as long as one is not using any hardware or software which can decode what's being transmitted, unless they're working within the guidelines of the law.

No need for me to be any further involved in the discussion. I've not given an opinion, I'm simply (and clearly) pointing out the Federal guideline/law for you and anyone else who might (or might not) be interested.

Sorry, I sent a message but apparently it didn't get through. So i'm using the yahoo form just to be sure. I'll post a photo in a minute-
Here are the steps:
1) Remove 6 black screws from the back of the scanner. Two are in the battery compartment.2) Remove the casing3) Remove 6 silver screws that hold the board to the other side of the casing. Again, 2 of the screws were under a black tape next to the speaker. 4) Remove carefully the board from the casing - two wires will be connected to the speakers, you will need to watch that.5) On the top part, there will be actually two boards connected through a header. Pull them apart.6) Look at the inner side of the top board. You'll see a few solder discs marked GROUND, DISC, RSSI and another one I can't remember. You need to solder an audio cable to DISC and GROUND.7) Now you have to find a way to get the cable out of the casing, and also solder a mono p2 jack (or whatever you want) to the other end. This will be your unfiltered audio out. The DISC will be the tip of the p2, GROUND will be the ring.
I passed the cable through the hole in battery compartment. I'd prefer to make a new plug next to the power jack, like this:http://forums.radioreference.com/uniden-scanners/108388-396t-usb-port-discriminator-bluetooth-mod.html <http://forums.radioreference.com/uniden-scanners/108388-396t-usb-port-discriminator-bluetooth-mod.html> But I couldn't find the USB jacks.
8) Now just put everything back together, plug the audio cable to your computer, and use either shipplotter or AISmon to decode the data.
Have funBruno--- In BCD396XT@yahoogroups.com, "Walter Jinright" <ipnfla124@...> wrote:

Did they reband? If so then you need to reprogram with proper frequencies,
system type and bandplan if needed (Motorola system
). Frequencies would be 15Mhz lower than the old frequencies.

smile This will be my one and only post on this (and technically, this topic shouldn't be on this group anyway)...

I'm sorry Walter, your attorney is mistaken (attorneys are fallible, you know LOL). It is illegal to decode (decode being the keyword, not capture) the transmissions. Contrary to your friends in law enforcement, who clearly don't know the law, I do work with law enforcement and have for over 16 years. And I do know the law on decoding MDTs and the like...you cannot, as a citizen, do it legally. It's against Federal law. Capturing coded transmission is fine, as long as one is not using any hardware or software which can decode what's being transmitted, unless they're working within the guidelines of the law.

No need for me to be any further involved in the discussion. I've not given an opinion, I'm simply (and clearly) pointing out the Federal guideline/law for you and anyone else who might (or might not) be interested.

It has been many years since I looked at the laws regarding DECODING.

I THINK the federal laws make decoding of ENCRYPTED communication illegal. I don't think decoding of non encrypted communications is a problem. I must admit that as I type this I find myself using the word "communications" and not the word "data". The more I think about this data may be covered under another part of the law from communications. Just shows how you word something can give a totally different message. Oh well!

Plug the antenna back in.

:)

Working fine here with no changes on my 396XT and 996XT.

If you need a working freescan file, let me know.

Yes it is, but by programing in the rebranded frequencies I get all troops statewide not just Troop D. Well at least C-D-and K so far that I have heard.

I don't know about the legality of decoding in the US (I'm Brazilian) but a system like AIS would worthless if the regular amateur boat owner couldn't decode the messages. Its main goal is to avoid collisions.

Review the ECPA as amended in 1994. It includes
interception of non-encrypted communications.
This even includes non-encrypted VOICE communications.

Ignore the thread title. The discussion of legality was regarding MDT (Mobile Data Terminals used in police cars) decoding, which is illegal to decode in the US under a Federal law known as the ECPA (Electronic Communications Privacy Act). This is the law that also makes intentionally monitoring a cell phone or cordless phone call that you are not a party to illegal (and does not discriminate between analog, digital, encrypted, encoded, or smoke signals).

I sent Mike a file.

I am in Central CT, about a 6 Iron from HQ, so I may not be hearing Troop D from the same site.

Here's the listing of sites, though my scanner tells me that some of the sites in this listing are mis-labeled.

I hear Troop D from the site listed as C727 001.

I'm probably too far away to pick up C727 003, which is reported to have been re-banded.

On a side note, I drove from Middletown to Darien today, down the Parkway and back up I 95 and everything was "normal".

To assist you, we need a lot more information.
What software program are you using ?
What cable are you using ?
USB or Serial port ?
Baud rate ?

We certainly need a lot more specifics about your setup. However,
for the record, I installed Freescan on an old laptop, set it up to
communicate at 115.2 kbps and it had no problems finding my scanner
(you could say "it just worked" - I don't recall setting anything on
the scanner end). I've been able to program the systems that I
monitor, which are basically fire (as I'm a volunteer firefighter),
CB and ham radio.

If you've assigned all the sites for the system to the same quick key, you can disable scanning of the system with a single keypress. You can quickly scan a single system two ways:

1) Disable all the SQK's for the sites in the systems you don't want to scan.
-or-
2) While scanning the desired system, press and hold HOLD.

Assign each System a System Quick Key,
then use that to enable/disable them.

Hi everyone, new member from Australia.

I've had my 396XT for a few weeks now, and have been using it, and programming it. Great little unit.

One question that is bugging me, and I was hoping you people might be able to help out:

I have the NSW GRN (APCO25 trunked) programmed, and when it is scanning or searching, every few seconds the display flashes Close Call. Close Call is turned off (confirmed by transmitting next to it), and I suspect that it is scanning previously saved Close Call hits. I have assigned a Quick Key to Close Call and turned it off while scanning, but it still keeps happening. Any ideas?

Thanks.

At some point you've run Close Call Auto Store. Hits discovered in this mode are stored in a system named as you see. To stop scanning those hits, you need to delete the system, assign a SQK to the system then disable that SQK, or lockout the system.

I had two groups scanning under a system the other day and in disabling one, I then disabled the other.

I was not able to bring the groups back up again. I went and unlocked them, but had no luck. Had to use

FreeScan to fix the problem.

So, if I inadvertently do this again in the future, how does one bring the groups back without using software.

Thank You.

My solution to this problem is to program one channel in each system
that is in a group all to itself and has NO Group Quick Key. The
channel is set to NEVER hear anything. The result is that under no
circumstances will every group in the system be locked out and
therefore, it's easy to bring the desired groups back.
I found this MUCH easier then having to remember how to do the procedure
(or to do it while driving).

> Can you explain this in another way perhaps?

Sure. Best way is to use an example. For this example I have a system for the Los Angeles County Sheriff's Dept. In that system I have 8 groups which have Group Quick Keys 1 - 8. I also create a 9th group which has NO Group Quick Key and has only one channel programmed. I call that 9th group "Keep alive" and I name the one channel in that group "Keep alive". The frequency programmed in 500.025 with some DPL on receive. Since that is the bottom of TV channel 19 which happens not to be used for TV here in Los Angeles, the squelch will never open on the Keep alive channel.

If I turn off all the Group Quick Keys, the "Keep alive" group will still be active so therefore the rest of the groups can be turned back on easily.

In case you have not figured it out, I ONLY use System Quick Keys to turn systems on and off, and ONLY use Group Quick Keys to turn groups on and off.

I gotta ask, Jim. If you have that single channel, that will keep the
System 'alive', but how do you then get back to it to re-enable a GQK,
as a single channel will scan extremely fast.

I get it now, good explanation.

Thanks for that. Interesting solution you came up with...

Doesn't seem like that would be an issue.

Guess I will try this see how the radio behaves...

Thanks Paul. Yes, I did experiment with the Close Call Auto Store once. I got rid of it by erasing all info from the scanner when uploading from FreeScan.

Subject: Re: [BCD396XT] New member

At some point you've run Close Call Auto Store. Hits discovered in this mode are stored in a system named as you see. To stop scanning those hits, you need to delete the system, assign a SQK to the system then disable that SQK, or lockout the system.

Subject: [BCD396XT] New member

Hi everyone, new member from Australia.

I've had my 396XT for a few weeks now, and have been using it, and programming it. Great little unit.

One question that is bugging me, and I was hoping you people might be able to help out:

I have the NSW GRN (APCO25 trunked) programmed, and when it is scanning or searching, every few seconds the display flashes Close Call. Close Call is turned off (confirmed by transmitting next to it), and I suspect that it is scanning previously saved Close Call hits. I have assigned a Quick Key to Close Call and turned it off while scanning, but it still keeps happening. Any ideas?

Thanks.

5408. Idea for enhancing backlight settings

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-05-06 15:26:57 UTC
From: Steve Wilson
Topic: 5408 Message: 5408

I am a new owner of the BCD-396XT. I finally decided to upgrade from my BC-246T, which usually stays in the car.

A thought occured to me that it would be cool if the scanner's backlight option had different settings for when it is attached to the AC adapter vs. when on battery power...much like laptop power settings. That way, for example, you could have the backlight triggered on squelch when plugged in, but disable it while on battery to reduce the drain on the battery. Does this make sense?

Guess this is an RFE for Paul, if it makes sense. :-)

Thanks, Steve

5409. Audio dropouts for trunk and conventional

Had done a Google search and found a thread on radioreference. Turned out to be the WX. I knew to check the Priority Alert, but didn't think of the WX. It's sooooo much more pleasant to listen without dropouts.

Someone on the radioreference thread asked about the feasibility for a 2nd receiver for alerts. You certainly have my vote! It was allow us to have the alerts without compromising the audio quality due to dropouts.

Thanks for the link to common questions. I will check it out.

Thanks, Steve

A second receiver would significantly add to the price of the unit.

But, it would allow for uninterrupted checking of the weather or Close Call, trunked priority (any TG on any system type), better priority on conventional, and other features.

Speaking of WX radios I have noticed a competitor has a new version of a pretty popular WX/All Hazards radio. Not too many inhancements though so my opinion is oh well. Which brings me to a question.

The 396xt has what I consider an excellent WX receiver and does eveything, and more, than any other dedicated radio out there does. AND it has the end of transmission capability to shut the radio off (remotely by NOAA) at the end of a warning. Very cool feature. I have not found another radio out there that has this. Why then doesn't Uniden make a WX alert desk top radio that has all the good features that the 396xt already has? It is obvious it can be done. Why not do it? I think it could be a great idea.

In my opinion, of course.

My Reecom unit will shut off on the end code.

As for the features between scanners and alert radios, that's
a good question. They are designed by the same people AFAIK.

For the same reason that some of us prefer picture-in-picture rather than buy another TV.

Agreed, but "significantly" is a subjective term and may be worth the expense for those who need it or prefer it. It would be interesting to compare the cost vs. demand for a fully functional duplicate receiver vs. just a 2nd receiver for WX.

A second receiver section would entail more real estate on the PCB.
I would imagine with that radio's form factor, it's maxed out on part placement.
Would be a cool feature to have a second RX with adjustable mix levels, audio channel assignment, and priority.
Much like a dual-band amateur radio for mobile...

Great for monitoring the T-birds with Diamond in the left channel and solos in the right...

Still, this at least for myself, this is quite the awesome radio for it's size, and close call continues
prove itself...

Just for WX you will never see enough demand. There has been some demand for a second receiver which would cover WX as well as the other aspects I mentioned, but I still don't think the demand would be high enough to recover the R&D costs. If you're going to add the weather receiver, it would be dumb to not to the extra mile for the fully functional receiver.

As for "significantly", about $200-300 depending on whether the decoding circuits can be reused for the second receiver. I don't know of many people who would want to pay $700 to $800 for a portable scanner just to get the advantages. Sure, several people would, but I doubt enough to recover the costs.

There is also the aspect that it would increase the size of the unit (unless the size of the components has offset that in the last few years of development).

Why carry more than you need to? I have enough to carry between two scanners, sometimes amateur portable, camera and lenses plus camera bag. Last thing I wants another reciever when I have two very capable radios with weather alert.

If it was just for WX, then it's wasted outside the US (as the existing WX features already are for me). However, if the second Rx can be assigned to other purposes as well (CloseCall, priority watch, etc), then it would be a really useful asset.

The amateur gear with two receivers doesn't seem to have a $200 premium, probably nearer $100. However, it is worth noting that in the Icom D-STAR amateur radios (which, like P25, require a vocoder chip from DVSI), only one of the receivers is able to decode digital transmissions. That might be a compromise required to keep the cost down. Right now, a second, analog only Rx wouldn't be a big handicap (I don't have any P25 systems in my scanner yet - but I will within a couple of years when our fire service goes digital), but it might be limiting in the future.

Something to keep in mind is that some ham rigs don't really have dual receivers, but simply dual VFOs.
Adding a second VFO is a matter of firmware while a second receiver requires duplicate hardware.

That said, I thought Canada was switching over to the same alert system (and same frequencies) that the USA uses.

Ok, so a 386XT with dual VFO much like the Yupiteru MVT-7100 series.

That would be very useful. Could toggle between a channel within a group or the current frequency
set in the VFO.

Wonder if that could really be accomplished in firmware...

But I'm able to simultaneously listen to two separate frequencies (in the same or a different band). Example: Icom IC-91AD has this ability, and its two receivers have different capabilities (only one can do digital, only the other can do wideband FM). Sounds like two receivers to me.

>That said, I thought Canada was switching over to the same alert
>system (and same frequencies) that the USA uses.

I'm in Australia, where a US style weather alert system is never going to happen. :)

It definitely could be done in firmware. The scanner has one VFO. Adding a second one would only require another channel exactly like the one for the first VFO, and a way to select it. You could simply have the keypad active to select 10 VFOs when you are in VFO mode. I don't recall the Yupi all that well, but I know the recent AOR offerings have two VFOs.

If you can hear two conversations at the same time, it has to have dual receivers.

My point was not specific to the 91, but about ham rigs in general. Some of them have only dual VFOs which can only monitor one frequency at a time.

What does any of this have to do with "Audio dropouts" which the original
poster stated was found and corrected
by an option which was overlooked ?

It was not 'corrected' - it was 'disabled'.

If you have a second receiver, you don't have to put up with any dropouts
on the received signal while the receiver switches to the secondary function.

This means WX Priority (the function that was disabled), Close Call, or channel
priority could be used with no gaps in the received signal. Additionally, more
features such as true priority among any system type could be added.

Close Call DND does help on the XT with the gaps, but CC is disabled whenever
a signal is received. Hence, it's not a true solution.

That's exactly what I was referring to. The 91 is one of several examples of dual receivers, which can monitor two different frequencies simultaneously (though when both fire up, it can be tricky picking the tangle of audio apart! :)).

>My point was not specific to the 91, but about ham rigs in general.
>Some of them
>have only dual VFOs which can only monitor one frequency at a time.

True, but I was pointing some do have dual receivers and it doesn't seem to be a major price premium, unless you want digital capability on both receivers.

In my (admittedly biased) opinion, the BC370CRS is the best All Hazards radio on the market. In addition to full SAME support (including paying attention to the end-of-message signal), it will alert to All Hazards in areas without NOAA coverage, but with alerts going out on AM or FM Broadcast stations.

It also supports external trigger (for hearing or sight impaired alerting). Plus, is a 300-channel conventional scanner with AM/FM broadcast coverage and Atomic Clock.

Only one receiver, though.

Which competitor has a better one?

IIRC it provides a switch closure at the beginning of an alert (momentary).

Correction, it will provide a voltage out (9V) at the beginning of the alert.

5439. Cape Canaveral frequencies

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-05-12 06:35:13 UTC
From: Nader
Topic: 5439 Message: 5439

Going to see the Space Shuttle launch Monday. Does anyone know which would be good frequencies to use for the Bearcat BCD396XT or other scanners? Thanks.

5441. Home Patrol vs BCD396XT

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-05-12 15:22:33 UTC
From: larrykoch
Topic: 5439 Message: 5441

I have been evaluating both the HP and 396 for the past six months to determine which one better meets my needs. I have determined that the 396 is better suited for me. I monitor a P25 system, several pager frequencies, aviation frequencies and some older public service FM systems.

I am going to sell the HP. I am asking $425. If I don't sell it by the end of this week I am putting it on e-bay.

If you are interested, contact me off-list at larrykoch@...
If you want you can call me at 816-271-3860.

Thanks.

Excellent list, Mark! Although I personally don't need them at the present time, I've saved (and backed them up...I'm somewhat of a fanatic about backing up lol) for future use. Thanks for posting them!

I was expecting a much larger list. I mean you really need all you can get. Come on !!!

Just kidding. It is a great list.

Excellent list, Mark! Although I personally don't need them at the present time, I've saved (and backed them up...I'm somewhat of a fanatic about backing up lol) for future use. Thanks for posting them!

5444. Won't decode digital?

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-05-16 21:59:17 UTC
From: Lance
Topic: 5444 Message: 5444

Was up at the Amgen Bike Race from Lake Tahoe to SoCal.

The media flying over head was transmitting digital within the 450.0-450.975 band.

When I found these freqs in close call. I changed them to Digital only mode. The radio did not
decode the audio. I then set up a custom search using the above mentioned band. I set it to C-ch only.
I did not know how to set a MOT. Band plan in this case. Still not decoding. P-25 time set to zero.

Looks like the radios I saw where from this rental company:
http://www.seiwirelesssolutions.com/specials.htm

Any ideas about this? Interesting to note the media using digital.

Thanks group.

Topic: 5445 Message: 5445

I was looking at the specs for this radio:
http://www.seiwirelesssolutions.com/downloads/mototrbo/MOTOTRBO_Portable_Spec_Sheet.pdf

Looks like the digital vocoder is AMBE+2T with this protocol: ETSI TS 102 361-1, -2, -3

Perhaps this is why?

The signal was probably not a APCO 25 digital but a MotoTrbo.

Those are Mototrbo. Not licensed for scanners.

That's kinda what I suspected since they are not P-25 after reflecting on this.

Oh well, would have been cool to listen to the live broadcast from the Copter...

Here's the link for the race if you care http://www.amgentourofcalifornia.com/homepage#2

Thanks Paul.

There is a way to decode MOTOTRBO. On RR look at the thread on DSD. I forget ecatly what sections of the forums it's in but I think it's computer control or software decoding or something like that.

I did some reading on my own, and did see some open source projects.

I thought I read that it could not be decoded from speaker audio.

If that is not true, perhaps SMT based PCB could be built that takes audio input,
and has it own final audio stage with small speaker.

Just speaking out loud.

This does have me wondering about the future for digital scanners...

I wouldn't be too concerned with the future of digital scanners. Mainly because most users couldn't figure out how to hook their computer and scanner and get things like
Ubuntu programming done. It's a royal PIA dealing with Linux and the various open source programs, especially since on newer versions they removed ALSA in favor of "newer" more "capable" sound control and it will not work with most software or sound cards! Brilliant move there.... NOT!
The only way I got DSD to work was after a couple weeks of fighting I changed to Ubuntu 10.04 instead of the latest and 'greatest" and it finally worked. Another issues is say the Java program that works similar to DSD requires massive CPU power and memory and no ones going to run out and buy a dual core 16GB computer just to run one single Java based program to decode what their scanner doesn't. For the DSD program I bought a Refurb from Tiger Direct for under $100, put Ubuntu 10.04 on it and it decodes fine. Best part is it has serial ports too. I now have 4 of these cheapo computers, one runs DSD, one runs two instances of PCR software for the PCR 100 and another runs Probe for OS535 in a 2035 and the last runs 2 instances of Unitrunker. It works well since each of the computers cost under $100 and has serial ports as well as USB. No matter what though these setups will never replace scanners.

I think future scanners should have a discriminator output available,
so external decoders can be used. I've been using ham gear for
decoding of some digital modes (POCSAG, D-STAR), because many ham
radios have a 9600 bps packet interface which is suitable for
connecting data decoders to. A similar facility in scanners would be
very useful when an external decoder is needed to monitor a particular system.

The GRE PSR800 and the new portable receiver from Alinco both have discriminator outputs from the factory. I would imagine other manufacturers will follow as new models come out. Features like this tend to take a while, but it is nice to see how many features have been added over the years. For example, the control channel info the 396xt can send to Unitrunker and other 3rd party apps.

It's GRE and Alinco that are following. AOR has had it for years.
BUT, it would be nice if all scanners came with that.

Excellent thought!

I have been doing discriminator output mods for many years. Seems like the only "scanner" (that I owned) that had a discriminator output built in was the PCR-1000.

Wish more manufacturers would offer that as an output.

That's exactly why I'd like to see discriminator outputs as standard
on scanners. One network here is MPT1327, which is going to require
Unitrunker to track. I don't like the idea of hacking an expensive
scanner (especially a handheld one) to get a discriminator output. ;)

No. It is just analog. It also does not do trunking. It does, however, have an IQ output to use with SDR software.

MODERATOR NOTE: This is how it always starts. An innocuous or humorous post about encryption that rapidly devolves. This is a reasonable post (thus allowed through), but lets not rehash all the old encryption arguments again. Please, let the thread die a death with dignity this time.

At 10:04 PM 5/23/2011, you wrote:
>Another reason for encryption to be brought to radio systems.

Depends on the system and the way its used. Our fire service relies
on volunteers being able to easily listen in, which means encryption
would be a major barrier. For Police, the benefits of encryption,
OTOH, would outweigh any disadvantages.

5467. Create a "Favorites" group during a big event

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-05-26 03:14:59 UTC
From: atterberg2088
Topic: 5467 Message: 5467

Is it possible to create a favorites group from talkgroups that are currently programmed to different group quick keys within the same system?

For example, here in Salt Lake the fire/ems service to the mlultiple suburb cites is provided by the Metro Fire Agency. I have their 5-6 TG's in their own quick key. For police, I have the city pd's dispatch, car to car, tac, etc programmed into various quick keys.

During a major event, I would like to be able to grab the fire response TG, the applicable PD TG and whatever else (Medivac, tactical, etc.) and pull them all into one "reserved" quick key that I could scan without having to lock out everything else.

The trouble is that the combinations of TG's is numerous. Otherwise, I would just program in the most likely combos and call it good.

Anyone have any ideas?

Thanks!

Yes, you can do that, but there is a setting you need to make so the scanner does not see the TG disabled in other Groups and skip it. I forget the exact setting offhand, but once you do that the scanner will scan any TG enabled in any list - even if it is disabled in another list.

You can't really do what you want for a specific group within a system, but you can do it for a system itself. The easiest way to do what you want would be to create a "big event" system (essentially a duplicate system, with the same CC/frequencies) that contains only the TGIDs that you want in your "big event" / "favorites" list.

To access only that system without having to to disable any other quick keys; There are two ways to do it.

1) Use the "system hold" feature to temporarily 'lock' the scanner onto that system.

2) Use the startup key feature to enable only that system by default when you turn the scanner on.

5470. Sorting Frequencies...

Yahoo group: BCD396XT (2011 — 2014)

From: Lance
Topic: 5470 Message: 5470

I have the Alpha Tags as the reference to the way objects are organized in this radio.

As an example, down at a group level within a conventional system, I might list Sheriff, then Sheriff Input, Co. Fire, then Co. Fire Input, Police, Police Input, etc...

However, I used the "Scanner Optimizer" tool in FreeSCAN. Which sorts frequencies in numerical order.

So, given the speed at which this radio scans, and if that even applies here in a DMA based radio architecture,

Does sorting really effect the time it takes for this radio to tune a programmed frequency and then play the audio?

How much time in Milliseconds are we talking here between the radio demodulating audio between sorted and unsorted

frequencies? Is this even valid in this type of Architecture?

Thanks,

-Lance

If you have your delay set at zero and the system hold time set to zero and not a lot of frequencies in the scan list (meaning thousands) I don't think you should notice a difference. I am sure there are others out there that will have a more detailed and accurate response for you.

DMA doesn't affect how the VFO tunes. DMA is simply a way of organizing the storage memory most efficiently for storage of items. Non-DMA scanners remembered channels in fixed banks with no ability to group them logically. The DMA removes those limitations. But there is still only one VFO in the radio and it must tune each frequency you scan.

There is a small advantage to tuning the VFO from one adjacent frequency to the next because there is a finite slewing rate for the tuning and a period of time for frequency/phase locking (in FM reception). The frequency/phase locking is about the same no matter how tuning occurs but it does take the tuner some time to tune from one frequency to the next. If you're tuning from say 100 MHz to 110 MHz (a step of 10 MHz) then perhaps that takes 2.3 milliseconds. But a jump from 100 MHz to 200 MHz (a 100 MHz step) would take 23.0 milliseconds (assuming the slew rate is constant).

So run hypothetical numbers and compare the results. Say you have eleven channels spaced 10 MHz apart (100 MHz to 200 MHz) and the radio takes 2 milliseconds to change by 10 MHz (rounding off to make the numbers nicer). We're not including the lock time required to acquire the signal and play audio. That is assumed here to be constant regardless of the jump in frequency.

If the channels are in order (100, 110, 120, 130...200) then that would be ten steps of 10 MHz or 20 ms total time to scan up. There is also the one last part which is the 'wrap-around' when you hit 200 and jump back to 100 to start the scan again. That's a jump of 100 MHz which is another 20 ms. So looping through one complete scan and starting off where you were takes 40 ms if the steps are consecutive.

Now let's put the channels out of order:
100, 130, 200, 180, 150, 160, 120, 110, 140, 170, 190

It's still the same eleven channels spanning 100 MHz to 200 MHz but they're now jumbled up so the steps aren't uniform. In this case the steps are:

30, 70, 20, 30, 10, 40, 10, 30, 30, 20

So now the time delays for each of those steps are in milliseconds (2 ms per 10 MHz):
6, 14, 4, 6, 2, 8, 2, 6, 6, 4

That's a grand total of 58 ms for a one-way trip up the list. The wrap-around for this is a 90 MHz step (end of the list is 190, start of the list is 100, the difference is 90). A 90 MHz step is 18 ms to add to the 58 ms for a grand total of 76 ms for a complete scan.

So you have 40 ms for a frequency sorted list and 76 ms for an unsorted random list. You gain a 47% improvement in speed by sorting over the given random list. Note that this isn't the worst case list since there are some small steps, it's just a random list.

Now, the reality is that the VFO in the radio is most likely faster than 2ms but the result still applies. As you scan larger and larger sets of frequencies, the total time required to scan a sorted vs. unsorted list will diverge.

All great info, but you also have to look at the microprocessor and how it is programmed.

Scenario A: The micro knows when the PLL is locked (through a "PLL locked" feedback line), and then checks the COS for activity. If none is found, it moves on to the next channel. If activity is found, it evaluates the channel for proper CTCSS/CDCSS/NAC/DataStream/whatever.

Scenario B: The micro simply waits X mS (or uS) for the PLL to lock, and then performs its evaluation. (where X is a maximum tolerance)

If scenario B is the case, there would be no difference whether the VCO has moved 10 Hz or 10 MHz or 1000 MHz, as the timing would be all the same.

It is likely that Uniden IS using a PLL Lock feedback line in which case there may be some advantage to sequential frequency tuning.

In the real world, the time you are saving in sequential frequency scanning is likely not worth the aggravation you would have in finding a specific channel when your channels are arranged in the order: Town A PD 1, Town B FD 3, Town E EMS 2, Town A EMS 2, Etc.

Yes, you may be able to scan your channels in 9.7 seconds as opposed to 10 seconds, but your channels would be in no logical order whatsoever. Is that worth saving 0.3 seconds in scan time?

Alex wrote:
> DMA doesn't affect how the VFO tunes. DMA is simply a way of organizing the storage memory most efficiently for storage of items. Non-DMA scanners remembered channels in fixed banks with no ability to group them logically. The DMA removes those limitations. But there is still only one VFO in the radio and it must tune each frequency you scan.
>
> There is a small advantage to tuning the VFO from one adjacent frequency to the next because there is a finite slewing rate for the tuning and a period of time for frequency/phase locking (in FM reception). The frequency/phase locking is about the same no matter how tuning occurs but it does take the tuner some time to tune from one frequency to the next. If you're tuning from say 100 MHz to 110 MHz (a step of 10 MHz) then perhaps that takes 2.3 milliseconds. But a jump from 100 MHz to 200 MHz (a 100 MHz step) would take 23.0 milliseconds (assuming the slew rate is constant).
>
> So run hypothetical numbers and compare the results. Say you have eleven channels spaced 10 MHz apart (100 MHz to 200 MHz) and the radio takes 2 milliseconds to change by 10 MHz (rounding off to make the numbers nicer). We're not including the lock time required to acquire the signal and play audio. That is assumed here to be constant regardless of the jump in frequency.

>
> If the channels are in order (100, 110, 120, 130...200) then that would be ten steps of 10 MHz or 20 ms total time to scan up. There is also the one last part which is the 'wrap-around' when you hit 200 and jump back to 100 to start the scan again. That's a jump of 100 MHz which is another 20 ms. So looping through one complete scan and starting off where you were takes 40 ms if the steps are consecutive.

Thanks Lance
I guess did not explain myself very well. My problem is how they appear on the Object Editor work sheet. The radio works fine and displays the in DEC format. I can work with the Object editor easier if it displays the objects in DEX format and even though I have it checked in the global settings, the spreadsheet displays it in native format. Sorry for any confusion
Ralph

Ralph, didn't see any previous message from you, so not really sure what your referring too.
I originally posted this question about sorting, others have responded with answers from their
perspective...

From: Alex
Topic: 5470 Message: 5476

In what I described the microprocessor has nothing to do with the speed of the VFO changing frequency so therefore the step size does matter.

A VFO can only change frequency at a certain speed because of the way it's controlled (usually by a varactor diode). It's not instant frequency changes from one frequency to another. That is where the majority of the delay comes from. I specifically ignored PLL lock because that's constant for any frequency change. But the actual frequency change delay is not.

If the micro is using a delay of X to wait for a VCO change, no amount
of VFO change will have any effect on the delay, as the micro will
always wait X mS. Do you not agree that the micro could operate this way?

It's the microprocessor that controls all the timing regardless of any
physical components involved. (feedback line issues aside)

If you ignore the micro's action, any timing issues are moot. It's the
micro that is in charge of everything that happens.

Joe M.

>>> DMA doesn't affect how the VFO tunes. DMA is simply a way of organizing the storage memory most efficiently for storage of items. Non-DMA scanners remembered channels in fixed banks with no ability to group them logically. The DMA removes those limitations. But there is still only one VFO in the radio and it must tune each frequency you scan.
>>>
>>> There is a small advantage to tuning the VFO from one adjacent frequency to the next because there is a finite slewing rate for the tuning and a period of time for frequency/phase locking (in FM reception). The frequency/phase locking is about the same no matter how tuning occurs but it does take the tuner some time to tune from one frequency to the next. If you're tuning from say 100 MHz to 110 MHz (a step of 10 MHz) then perhaps that takes 2.3 milliseconds. But a jump from 100 MHz to 200 MHz (a 100 MHz step) would take 23.0 milliseconds (assuming the slew rate is constant).
>>>
>>> So run hypothetical numbers and compare the results. Say you have eleven channels spaced 10 MHz apart (100 MHz to 200 MHz) and the radio takes 2 milliseconds to change by 10 MHz (rounding off to make the numbers nicer). We're not including the lock time required to acquire the signal and play audio. That is assumed here to be constant regardless of the jump in frequency.
>>>
>>> If the channels are in order (100, 110, 120, 130...200) then that would be ten steps of 10 MHz or 20 ms total time to scan up. There is also the one last part which is the 'wrap-around' when you hit 200 and jump back to 100 to start the scan again. That's a jump of 100 MHz which is another 20 ms. So looping through one complete scan and starting off where you were takes 40 ms if the steps are consecutive.
>>>
>>> Now let's put the channels out of order:
>>> 100, 130, 200, 180, 150, 160, 120, 110, 140, 170, 190
>>>
>>> It's still the same eleven channels spanning 100 MHz to 200 MHz but they're now jumbled up so the steps aren't uniform. In this case the steps are:
>>>
>>> 30, 70, 20, 30, 10, 40, 10, 30, 30, 20
>>>
>>> So now the time delays for each of those steps are in milliseconds (2 ms per 10 MHz):
>>> 6, 14, 4, 6, 2, 8, 2, 6, 6, 4
>>>
>>> That's a grand total of 58 ms for a one-way trip up the list. The wrap-around for this is a 90 MHz step (end of the list is 190, start of the list is 100, the difference is 90). A 90 MHz step is 18 ms to add to the 58 ms for a grand total of 76 ms for a complete scan.
>>>
>>> So you have 40 ms for a frequency sorted list and 76 ms for an unsorted random list. You gain a 47% improvement in speed by sorting over the given random list. Note that this isn't the worst case list since there are some small steps, it's just a random list.
>>>

>>>
>>> Now, the reality is that the VFO in the radio is most likely faster than 2ms but the result still applies. As you scan larger and larger sets of frequencies, the total time required to scan a sorted vs. unsorted list will diverge.
>>>

5478. Re: Sorting Frequencies...

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-11 23:37:47 UTC
From: Alex
Topic: 5470 Message: 5478

It's possible the microprocessor could wait some increment of time to allow the VFO to stabilize. However, I believe it's highly unlikely because the wait time would have to be a length of time equal to the largest settling time required by the VFO which would be the time required to change from the lowest possible frequency to the highest.

If, on the other hand, the microprocessor waits for PLL lock then the delay time will vary because a smaller VFO frequency step will occur faster than a larger step. I'm fairly confident that the 386XT uses PLL lock indication to listen on a frequency before moving on to the next programmed frequency. In that case search time is impacted by frequency sorting.

However, whether sorted or unsorted, the reality is that the difference is small or unnoticeable for most users if the number of individual frequencies scanned at any given time is small (low tens of frequencies). For users who are routinely scanning hundreds of frequencies then the difference between sorted and unsorted may manifest.

That is where the majority of the delay comes from. I specifically ignored PLL lock because that's constant for any frequency change. But the actual frequency change delay is not.

5479. Re: [BCD396XT] Re: Sorting Frequencies...

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-11 23:44:04 UTC
From: mch@nb.net
Topic: 5470 Message: 5479

Bingo. That's exactly my point. The micro could be waiting the full time no matter what the jump.

I agree they are likely using the lock indication, as Uniden rarely takes shortcuts in their products.

Still, I maintain that any advantage in scanning speed would be offset by the annoyance in finding channels which will be in no logical order at all (as they would only be in frequency order).

Joe M.

5480. Like new BCD396XT portable for sale or trade

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-13 11:23:31 UTC
From: Max Thames
Topic: 5480 Message: 5480

Hi All,
I am selling my BCD396XT which is hardly used. I have the base version of this radio and have found that I do not use the smaller one as I thought I would.

I'll sell it for$375 or will trade for a brand name metal detector in similar condition and value.

If you are interested, please respond here.

If we make a deal, the transaction can be handled through an escrow service to ensure that both parties are protected.

Max

5481. Analog/P25 System Programming

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-14 09:43:42 UTC
From: Jeffry Rehm

I am trying to program a trunked system into my 396 that is both Analog and P25. (The Nashville International Airport Authority) It looks to me to have one set of frequencies or sites to work with. To monitor, or scan, for both analog and P25 talkgroups how do I set up the system? If I choose P25 will it pick up both? Sorry, this is the first trunked system I have programmed like this. Thank you all for any help.

http://www.radioreference.com/apps/db/?sid=705 should be programmed as a Motorola Type II system. You should set the individual channels to either A(nalog) or D(igital).

I purchased the BCD396XT digital scanner. I can honestly say I've never been more confused after having read that "manual". I think I was more confused after having read it.

Being as confused as I was I wasn't in the mood to even attempt to manually program it. Then I tried a program called FreeScan. Found that to be just as complex. So I tried ARC-XT Pro. Still found it a bit much, but realized that with a subscription to radioreference.com I could import the frequencies automatically.

This seems to be working, at least according to what I see on the PC. All I want is access to Toronto's and Peel Region's Police and Parking By-Law officers frequencies. Can somebody please help me?

With Free Scan you could have imported the information also.

It's a great program.

I use FreeScan to manage my memories, though all my input is manual,
since local frequencies don't make the international databases.

>It's a great program.

Agree totally! :)

Yes, well aside from it being a great program can you help me program & better understand how to use it?

A clearer understanding of how the scanner is organized may help.
Follow the link to an "Easier to Read" on-line manual for the BC396XT...

http://marksscanners.com/396XT/396xt.shtml

Good luck,
John

Try to look at it as a learning experience. Instead of just buying a box to listen to the local police/fire/EMS, think of all the learning you can do, such as trunked systems, how to use freescan or bctool, and all the extra's the 396XT can do. (priority scan, special alert lights/tones, etc etc).

If you don't want to do that, perhaps you can get a local radio shop or scanner enthusiastic just to load what you want on it, and be done with it. (basically, turn it on and off). Or perhaps, you can try to return the unit, for something much simpler to operate. After all, the 396XT is about top of the line, in ability and complexity.

As a new user myself, I looking forward to learning much more about how to use it and radio transmissions.

On a side note, I warrantied my 396XT with Squaretrade.com. I put accidentally on it too, as it would be easy to drop and damage.

5490. Battery life question

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-22 06:59:38 UTC
From: Alex
Topic: 5490 Message: 5490

I've got three 2250mAh batteries (the ones supplied in the original box) but the radio seems to get maybe two hours of use (continuous scanning but not continuous audio) until the battery level warning kicks in. The batteries have been charged both in the radio (no wars on charging in the radio, please) and with a regular charger. It doesn't seem to matter. I'm just trying to get some anecdotal evidence to give me an indication on the condition of my own batteries.

To the members of the list: What capacity batteries do you use and what is your typical battery lifetime on this radio?

Hey Danny,

So basically you got a extended warranty for the radio?

Basically how does it work. What do you get for the price.

Thanks,

-Lance

I use Alkalines and get more than a full day of use.

I also use Energizer 2450mAh with a Powerex Maha CS204 charger. The bitch is that it will not charge just 3 batteries. You have to use 2 or 4.
I'm replacing that charger with the Powerex Maha CS401. It will charge 1 to 4 batteries as it has individual channels. I get a number of hours with the
rechargeables. My backlight is set to "Low" to reduce current draw. I also don't crank the volume.

Once the new charger arrives, I'm going to cycle the GP's that came with the radio and see how many hours I get with them.

Also going to test the 2450's from Energizer.

If you go the rechargeable route, check out the low discharge rate batteries made by Sanyo called Eneloops or the Maha Imedions which offer a little higher
current rating. Thomas Distributing sells them and the Powerex chargers.
http://www.thomasdistributing.com/

If you fish a little deeper in the website, you can find 4 packs of the above mentioned batteries.

There are a posts about this topic up on Radio Reference...

I'd venture to say your batteries need replacing. I get 6 hours on 2450's (name brands)

It's worth investing the time to learn the radio. I'm a fairly new user, but a bit of Googling, along with FreeScan have allowed me to put in the networks I'm interested in (basically fire, ham and our two CB bands - UHF CB is a common emergency fallback here). So far, all networks are analog and conventional. The fire network is due to go P25 conventional (and unencrypted) in the next couple of years. The only trunked network of possible interest is MPT1327, so that requires external software. As a result, and the fact it's not commonly used, I haven't bothered entering any frequencies for it yet.

I'm learning as I go, though my needs are not particularly sophisticated at this time. That may change in the future. The scanner does take a little while to get your head around, but once you do, it makes sense. FreeScan is an indispensible utility (at the right price too!) for programming the radio.

I'll have to open it up to make sure, but I think I have similar-capacity NiMH as you. I listen in the car during my commute - about 1/2 hr each way every day. I get about two weeks, so 10 hours with long rests between.

I am sure this has been mentioned before but a lot of poeple do not charge the batteries insdie their scanners.
I my self am one of them. I found that, for me, using an external charger designed to charge Ni-Mah in single unit chargers works best. I have a La Crosse Technologies 4 baycharger.
What i found is that if i left my batteries in my scanner it got really hot. Heat is not good for the batteries or chargers.
I also found that by using the scanner as the charger i got less usage time in beteen charges then by taking the batteries out and charging them in my external charger.
My test was basically for one week i charged the scanner over night. next day let it run continous. I found i got several hours more time when the batteries were charged with the La Crosse charger.
yes i know its not very scientific. But it works for me.

I also found that my GP batteries that came with my T, yes older batteries had way less time. They are just getting old.

From what i have read Ni-Mah batteries charge better individually rather then in series.

Its more convienent to leave them in and charge, and if your not a heavy user between charges you will never know. But if your getting a low battery warning a lot you might need to try an alternative method to charge the batteries. Or have several sets you can rotate.

Danny is right. I am in North Texas and over the years have met and helped several people program scanners.
We actually have a yahoo group just for our region and offer tips for local scanning. The hobby is full of great people.

Go to squaretrade.com. I get all my stuff warranty thru them. iPhone, surround sound, modem, TV, clothes washer, bread maker, etc.

I never had to use them yet, but by talking with them and seeing the reviews, I fully believe they will fix or replace my stuff if something goes wrong in the warranty period.

Basically, if the scanner breaks you send it to them and they fix or give you the cost you paid for it. If you get accidentally, they will do that even if u break it by a fall, etc.

Now if something goes wrong during the manufacture warranty period, they will recommend getting it fixed or replaced that way.

There site can give you much more info. Plus you can always call them directly. You can mostly get a live person within 5 minutes. They are in California, thus on pacific time.

Well, one thing that worries me is damaging the little metal clip ends that connects the battery.

Eneloops are pretty big, and over time of keep taking them in and out, they will break off, worries me. That's why I was excited when I seen it can charge.

Have the clips breaking been a problem for anyone?

I've had my 396XT for about 1-1/2 years, and a 396T before that. I change battery sets about twice a day, every day. Never had a problem with the battery contacts breaking, and haven't heard of anyone else having that problem.

Not saying it won't ever happen, but it doesn't seem to be a common problem at all.

The little metal clips the negative side of the batter touches. I had a Garmin 76CSX GPS, they was was known to break over time. That's why I was always super carefully when removing/inserting them big Eneloop battery's. I never had the issue, but quite using it when my Iphone came along.

Glad to hear nobody has that problem with the scanner. This gives me the choice to keep switching nonchargeables or let the scanner take care of them. Thanks.

How long was it on charge in the radio?

8-10 hours battery life is typical for 2000-2500 mAH cells.

5509. Re: Battery life question

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-22 20:29:08 UTC
From: Alex
Topic: 5490 Message: 5509

The charge time on the radio is currently set to 14 hours. It's been in the radio at least that long or longer on some days.

My normal usage is to drive to work in the morning listening to the radio with a power cord plugged in (so I'm not even using the batteries). At work I listen to it for maybe an hour or two. By the end of the day, as I'm walking back to my car, the low battery warning beep is active. I plug it back in for the drive back and then plug it in when it sits on my desk for the rest of the night until morning (about 12 hours on the desk).

I've charged them in a stand-alone desk charger, too. The desk charger (the LaCrosse four battery charger) does have the refresh cycle but that doesn't seem to help much, either.

I'll have to try it again over the next week or so. I'll charge only in the stand-alone and see if there's any improvement.

It sounds like the cells may be bad. You could try another set to see if there is any change.

However, one of the best ways to destroy the capacity in a rechargeable cell is to only use it a short time then put it on charge again.

I would set the switch in the scanner to not charge, then only use the Lacrosse at night to charge the cells.

I think you're right about them going bad. I'll have to test them some more. However, I do prefer to charge in the radio because of the convenience. Partially discharging and charging NiMH batteries doesn't really lead to a memory effect, but the number of total cycles does take its toll on the life. I may have simply exceeded the number of charge cycles over its life (one per day every day for two years is 732 cycles, typical life is 500 cycles).

You are correct, there is no memory effect with NiMh batteries like the older NiCd batteries had.

I think your problem comes from discharging the batteries for a couple of hours, and then performing a full 14 hour recharge. I have done some testing where I charged the batteries in my 396XT for various times, and then measured the capacity on my MaHa C9000 tester. I discovered that a 14 hour charge will totally charge a dead 2500 mAh rated battery.

You are drawing probably less than 100-200 mHa from your batteries each day and then putting back 2500 mHa. I think it is your continuous overcharging that is shortening their life.

The built in charger will not shut off when the batteries are charged. It just runs on a timer basis. In fact each time you plug the power cord in, the charge cycle starts again. When you charge the batteries for 14 hours overnight, and then plug the scanner into the car when driving to and from work, you are forcing even more current into the already charged batteries.

The batteries you have are defective now, but when you get new batteries I suggest reducing the charge time to be about 1.5 to 2 times the usage time (as a starting point). Even better is to get a smart charger like the C9000 which will properly top off any battery no matter how discharged it is.

I also enjoy the convenience of in-scanner charging but when I do, I make sure not to recharge until the batteries are totally dead. I also put the batteries in the C9000 every second week to "refresh & analyze" them,

Rick

5513. SquareTrade Warrany Cost

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-23 14:40:13 UTC
From: mo town
Topic: 5483 Message: 5513

Here is the warranty cost information. This is with a 30 dollar discount (they run discount codes all the time), and 6% WV sales tax.

You have to purchase it within 90 days of buying something. Now, I'm not pushing SquareTrade. I have no investment/interest in them. Just put it out there, as someone was interested, when I said I bought the warranty. And I didn't include the cost then.

Type of coverage:
3 years with ADH
Coverage starts:
6/22/2011
Coverage ends:
6/22/2014 more
Care Plan Price:
$74.99
Purchase Date:
6/21/2011
Purchased for:
$79.49

Not true. While NiMHs are not as susceptible to memory effect compared to NiCADs, they CAN develop it. I have lots of battery packs that public safety entities have destroyed due to using them only for 20-30 minutes then putting them back on charge. Fortunately, there are newer chargers that are smart enough to analyze the battery and not try to charge it if it is higher than a certain point.

That said, the point about the overall charge cycles is valid, and can lead to the same demise.

There is also the fact that NiMHs are designed to be rapid charged to break down the crystal formations. Charging in the scanner is not a rapid charge, so that too could be a contributing factor.

But, to say that there's no memory effect with NiMHs is simply not true.

This charger made by Maha / Powerex,
http://shop.mahaenergy.com/store/viewitem.asp?idproduct=405

claims to utilize a charging scheme know as "FLEX negative pulse charging algorithm" and it purports that conditioning
is not necessary: "as the pulse eliminates the memory effect just by charging the batteries."

So, perhaps this would better address the issue of NiMHs susceptibility as mentioned in this post...

It definitely is, as those chargers are designed specifically to charge NiMHs. They charge them properly, and more importantly they stop charging them when they are at full capacity.

That's another issue with any rechargeable cells. If you charge them when they are full, you can destroy the cell that way, too, as all you are doing is creating heat (as the cell cannot absorb any more charge).

I purchased this "smart" charger about a year ago for the same sale price that it is at right now ($39.95 + free shipping) and it has worked flawlessly in charging my nimh's for the 396xt. All my batteries continue to give me about 12-14 hours of scanner power.
I can put half charged batteries in it and it will only charge what it has to for a full charge. Although I usually only charge the batteries after they go dead in the radio. I have about 5 or 6 sets of 3 batteries and rotate them through.
Bob

Below is the link to the Uniden's page in question...If you look it has
this feature in it's list BUT it has a RED -X
beside it...which means that it does NOT have this feature.
I hope this helps with this matter.

Yep, I see that page. It is OK. Can't find a reference to it having the feature, though.

I think the OP got confused and thought the red X in the description was a green check mark. I have gone over the site about 5 times now and I cant find that listed any where. But to answer his question no the screen is not touch sensitive, while it has a nice display screen all hand programming and menus are accessible through the use of keys/buttons not the actual display screen. The only scanner on the market with touch screen control is the Uniden Home Patrol-1. So no the 396XT scanner does NOT have touch screen controls.

Hope this helps,
Bob

5529. Re: [BCD396XT] SquareTrade Warrany Cost

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-26 12:22:02 UTC
From: Derek Helling
Topic: 5483 Message: 5529

I have never purchased extended warranties for anything and am way
ahead, because I have never had a situation where an extended warranty
would have been beneficial. Essentially I am self insuring, saving all
those premium dollars in my bank account in case I have to replace/repair
something.

I purchase major items (not cars of course) using my American Express card which adds a
free
extension (one year I think) to the manufacturers warranty - never used
that either.

It seems to me that warranties, extended or otherwise are designed to expire before major breakdowns occur. This must work most of the time, otherwise the the companies selling the warranties would not be in business. So they get to keep most of the premiums and pay out on few claims.

I am wary of the extended warranty industry which some bad apples
have given a bad reputation. We had a case here in St. Louis recently, (US Fidelis).

5531. Re: Battery life question

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-26 05:39:58 UTC
From: Jamie Hanrahan
Topic: 5490 Message: 5531

> Not true. While NiMHs are not as susceptible to memory effect
> compared to NiCADs, they CAN develop it. I have lots of battery
> packs that public safety entities have destroyed due to using them
> only for 20-30 minutes then putting them back on charge.

Well... I don't doubt that the packs are not working well, but true "memory" is unlikely to be the cause.

True NiCd memory (I know, you said NiMH, but read on) is actually an extremely rare phenomenon in consumer cells. It was only *ever* observed in sintered-plate (very large) industrial and aerospace cells. To develop it requires that the battery be discharged to nearly exactly the same point - within a percent or two - over and over and over.

It was first observed on satellites that spent almost exactly the same amount of time each day in Earth's shadow. It can be avoided either by achieving full discharge (to 1 V/cell) before recharging... or simply by *varying* the level of discharge before recharging. Full discharge is not required.

(GE attempted to reproduce NiCd memory in sintered-plate cells with a computer-monitored discharging rig to be sure to discharge to the same point each time. Memory finally showed up after several *hundred* cycles.)

True NiCd memory also cannot exist where the charger achieves the correct state of "overcharge" at the end of a charge cycle (noticed by a slight decrease in terminal voltage). "Trickle chargers" do not do this. The chargers on the satellites did not do this either. They were fixed by reprogramming the charger to continue charging until the correct "overcharge" point. Presto, no more "memory," even though the satellites continued to spend almost the same mount of time each day on battery.

What DOES commonly happen to consumer NiCd cells is called voltage depression. It is not due directly to partial discharge, but rather by continuing to run charging current through the battery even after the battery is fully charged. It isn't possible with a "smart" charger that cuts off charging when the battery *just* starts to show the drop in terminal voltage that shows it's "full" - the correct state of "overcharge."

In a battery experiencing voltage depression the energy stored in the battery is the same as always (unlike in true memory effect). But you can't "reach" it because the terminal voltage is lower than usual. This causes equipment like laptops or radios to turn themselves off before the battery is really fully discharged (in terms of energy storage). You could continue to discharge the battery, though, in a "dumb" device like a flashlight.

Now you can see where the notion of "memory" in consumer NiCds comes from. For a very long time, "smart" NiCd chargers were practically nonexistent in consumer gear. They would either use a timed charger that always ran for a set amount of time (bad), or they would just use a trickle charger with instructions "discharge the battery completely, then charge for 8 hours" (or whatever) (worse). A battery not fully discharged before being put on a timed charger, or a battery left on a timed charger for a long time regardless of its

previous state of discharge, would almost invaribly develop voltage depression.

Voltage depression can be cured the same way as true memory: A few complete discharge/charge cycles. The trouble is that "Complete discharge" means to 1 volt per cell *in a pack not experiencing voltage depression*. Under voltage depression you sometimes have to discharge to a lower voltage, and most "smart" equipment will cut off at about 1 V/cell to avoid cell reversal. This makes "complete discharge" difficult. If you have loose cells, not in a pack, it's ok to discharge them to as close to zero as you can get.

But anyway... the public never heard of voltage depression. They had heard of NiCd memory, and nearly all NiCd problems in consumer hands were blamed on it. The stated avoidance method - discharge fully before recharge - was not a sure fix either, not with trickle chargers.

On the other hand, a smart NiCd charger will completely eliminate both voltage depression and true memory. Nevertheless the same tired old instructions about "do not recharge before fully discharged" are in hundreds of manuals for NiCd-powered equipment, even those that have smart charging circuits. It's also gotten into the manuals for NiMH-powered equipment, and I never heard of a NiMH charger that wasn't smart... until now.

NiMH cells are not *as* subject to memory as NiCds (and as noted above, NiCds are a lot less susceptible to it than is commonly believed). They are, however, very vulnerable to excessive charging. The main reason we have so few problems with NiMH is not so much that they are NiMH, but because smart chargers are so common.

So, here it is the 21st century and what does Uniden put in their $400 portable scanner? A simple timed charger. Arggh! It's almost guaranteed to damage NiMH cells over time.

And, yes, this means you want to discharge "fully" (that is, until the radio shuts itself off) before recharging *in the radio*. Even though true "memory" is not really a concern.

If you do a lot of "random time on battery" and you want a fully charged radio whenever you head out then you would be better off, in terms of battery calendar life, keeping a "smart" charger (Maha's are best IME) near your base station. You can leave a set of batteries in those chargers forever. When you get in from the field, swap the radio's batteries with the ones in the charger.

But that's a lot of trouble. I'm frankly aghast that Uniden put a dumb timed charger in radios this expensive.

For comparison, I recently bought a Kenwood 2m/440 ham transceiver for around the same price... it starts with basically the same components as the Uniden scanner (receiver, keyboard, display, microprocessor), but it also of course has a transmitter, and a GPS receiver too.

And Kenwood managed to include a smart charger for LiIon batteries at that price.

WTH, Uniden???

I was on the phone with US Fidelus and they wouldn't let me off the phone until I committed to getting one of their extended warranties. They are now being sued in Federal court for fraud. They were the pits. Glad I didn't give them my credit card number. You are right on target about extended warranties.

Topic: 5483 Message: 5533

This may very well be true and work for you. I recently had a fire and had to re-buy quite a few things and put quite a few things on a 3 year warranty.

I'm pretty easy on things, and try not to break stuff. So time will tell if I use any of the warranties and what the results will be. I'm betting as many things as I got, something will break either by accident or by use.

But as I said, not pushing them by any means.

I have never purchased extended warranties for anything and am way

ahead, because I have never had a situation where an extended warranty

would have been beneficial. Essentially I am self insuring, saving all

those premium dollars in my bank account in case I have to replace/repair

something.

I purchase major items (not cars of course) using my American Express card which adds a free

extension (one year I think) to the manufacturers warranty - never used

that either.

It seems to me that warranties, extended or otherwise are designed to expire before major breakdowns occur. This must work most of the time, otherwise the the companies selling the warranties would not be in business. So they get to keep most of the premiums and pay out on few claims.

I am wary of the extended warranty industry which some bad apples

have given a bad reputation. We had a case here in St. Louis recently, (US Fidelis).

I can't imagine Apple would behave like this with their 3 yr. extended Apple Care.
But that is way off topic...

5537. Re: [BCD396XT] Re: Battery life question

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-26 16:26:43 UTC
From: Paul Opitz
Topic: 5490 Message: 5537

Prior to the DMA generation of Uniden scanner, the #1 battery complaint (maybe close to #1 complaint overall) was Uniden's use of proprietary battery packs that were difficult and expensive to replace, and that had poor provision for emergency substitution of commonly available cells. Starting with the BC246T, Uniden returned to using AA cells exclusively in all new handheld scanner designs.

Based on going to AA cells (which was widely praised at the time, and which directly answered those complaints), there is no practical alternative to using a timed charger. You cannot detect charge state from AA NiMH batteries unless the cells are being individually charged at at least a .5C (preferably 1C or higher) rate and individually monitored. Trying to rapid charge AAs in series creates a huge risk of never detecting the charge end state (which occurs when the rate of voltage rise starts to decrease...if two cells hit that state at different times, the very subtle change can be completely masked by the cell that is not yet fully charged). Such a failure would be much more dramatic than the slight capacity loss that can occur from trickle charging a fully-charged cell.

LiIon uses a completely different charging methodology. Going to LiIon would permit a rapid charger, however the cost would be that you would again be stuck with an expensive proprietary battery that could not be substituted in the field for AAs in the event of an emergency or power outage lasting longer than the proprietary pack would last.

Subject: [BCD396XT] Re: Battery life question

But that's a lot of trouble. I'm frankly aghast that Uniden put a dumb timed charger in radios this expensive.

For comparison, I recently bought a Kenwood 2m/440 ham transceiver for around the same price... it starts with basically the same components as the Uniden scanner (receiver, keyboard, display, microprocessor), but it also of course has a transmitter, and a GPS receiver too.

And Kenwood managed to include a smart charger for LiIon batteries at that price.

WTH, Uniden???

5538. P25 Decode Question

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-06-26 17:48:05 UTC
From: Lance
Topic: 5538 Message: 5538

Last night I came upon a CHP who just pulled over a vehicle.
As the officer walked over to the driver, Close Call went off,
and displayed the VRS freq. from the car to his handheld.

However, it would not decode the P25 audio, just played the digital
sound. So, Is decoding P25 using Close Call independent of the
settings in Srch/CloCall Opt > Tone/Code Search ?

Or does having Tone/Code Search set to CTCSS/DCS
prevent P25 decode in "Close Call" mode?

Thanks.

I have been reading the replys to this topic and I have a question regarding using
a external charger to charge up the NIMH batteries instead of charging them up in the
scanner itself. I also use a La Crosse Technologies charger (BC900). At what charge rate do you
charge the batteries at? I have read that NIMH batteries should be charged at 0.5c which would be
a little better than 1000mah. The three 2350mah GP batteries that came with my scanner are only
holding about 1200mah at the moment and need to be replaced. The batteries are only about a
year and a half old.

Thanks,
Joey

Subject: Re: [BCD396XT] Battery life question

I am sure this has been mentioned before but a lot of poeple do not charge the batteries insdie their scanners.
I my self am one of them. I found that, for me, using an external charger designed to charge Ni-Mah in single unit chargers works best. I have a La Crosse Technologies 4 baycharger.
What i found is that if i left my batteries in my scanner it got really hot. Heat is not good for the batteries or chargers.
I also found that by using the scanner as the charger i got less usage time in beteen charges then by taking the batteries out and charging them in my external charger.
My test was basically for one week i charged the scanner over night. next day let it run continous. I found i got several hours more time when the batteries were charged with the La Crosse charger.
yes i know its not very scientific. But it works for me.

I also found that my GP batteries that came with my T, yes older batteries had way less time. They are just getting old.

From what i have read Ni-Mah batteries charge better individually rather then in series.

Its more convienent to leave them in and charge, and if your not a heavy user between charges you will never know. But if your getting a low battery warning a lot you might need to try an alternative method to charge the batteries. Or have several sets you can rotate.

Yes and no. If you set the CTCSS/DCS decode option to OFF, CloseCall will decode P25 Voice.
If CTCSS/DCS decode option is set to ON, P25 voice won't decode.

I am VERY glad Uniden got away from the battery packs and went with standard AA batteries. Having had a number of older Unidens, it is way more convenient and flexible to use AA batteries in the modern (DMA) ones. As many have said, if you are going to spend the money on top-of-the-line scanner, it only makes sense to spend a few more dollars on a good charger. I think it just adds flexibility to the scanner to be able to charge them in the scanner if necessary.

My 2 cents,

Clayton

Subject: Re: [BCD396XT] Re: Battery life question

Prior to the DMA generation of Uniden scanner, the #1 battery complaint (maybe
close to #1 complaint overall) was Uniden's use of proprietary battery packs

that were difficult and expensive to replace, and that had poor provision for
emergency substitution of commonly available cells. Starting with the BC246T,
Uniden returned to using AA cells exclusively in all new handheld scanner designs.

Based on going to AA cells (which was widely praised at the time, and which directly answered those complaints), there is no practical alternative to using
a timed charger. You cannot detect charge state from AA NiMH batteries unless
the cells are being individually charged at at least a .5C (preferably 1C or

higher) rate and individually monitored. Trying to rapid charge AAs in series
creates a huge risk of never detecting the charge end state (which occurs when
the rate of voltage rise starts to decrease...if two cells hit that state at

different times, the very subtle change can be completely masked by the cell

that is not yet fully charged). Such a failure would be much more dramatic than
the slight capacity loss that can occur from trickle charging a

fully-charged
cell.

LiIon uses a completely different charging methodology. Going to LiIon would

permit a rapid charger, however the cost would be that you would again be
stuck
with an expensive proprietary battery that could not be substituted in the
field
for AAs in the event of an emergency or power outage lasting longer than the

proprietary pack would last.

With LiIon there's no choice, they MUST have a smart charger or bad
things happen.

The ham manufacturers have solved this one as well. Many ham radios
have a "dry cell" pack available, which you can load alkaline or even
rechargeable NiCd or NiMH cells into. The dry cell pack clips onto
the radio in place of the standard battery pack. Dry cell packs have
been round for decades. I have a 1970s vintage HT (Icom IC-4E) with
a couple of dry cell packs that clip to the bottom of the radio.

Unfortunately yes if you have it set to find ctcss/dcs tones it will not decode the p25 I'm assuming you just heard a data noise. On the other side of the coin you cant decode analog if it is set to decode the NAC. Best way to use close call is to keep the tone decoding off and quick save the frequency if you can and set it for the proper tone decode option after you have saved it to the quick save group. I have mine at quick key 99 so i can check it on fly and I dont have to go searching through the menu for found frequencies.

Hope this helps,
Bob

I've come to the conclusion that if you'd like to stimulate a vigorous and active debate, just ask a guy how best to grill a steak or ask him about batteries.

Having said that, YES, thanks Uniden for allowing store-bought batteries. I won't purchase electronics that use proprietary batteries anymore, except my Canon Digital SLR, which offers/includes a AA battery pack as a backup.

I use rotating sets of NiMH batteries with a $14 charger and I don't stress about charging them in the radio either. If they act weak, I buy another set.

I usually expect 8 hours or so from a set. If I am handheld, I go handheld. If I am in the car or at home, I usually plug it in on charge or run it down - then plug it in.

According to studies, this will add 2 years and 7 months to my life expectancy.

Oh, and I always turn my steak ONLY once on high heat with the cover DOWN!

I completely agree about the move to double A's, it gives us a choice on what kind of rechargeable cell we want to use if any at all. And I have never been a fan of charging anything in my radio. I made a mistake a long time ago that made a pro-96 a melted mess. And as for LiIon batteries I have seen double A batteries and chargers out there that work very well. LiIon is the best choice by far in my opinion if you can find the AA's and a good charger they last all day and longer.

That's a really good point, Paul. I hadn't thought about the need to electrically separate the cells to do not-timed charging. (It's do-able but almost certainly not in a scanner the size of the 396XT!)

So I suppose "battery awareness" is what we are left with. One of:

1. fully discharge before recharging in-scanner

2. to properly recharge not-fully-discharged batteries, use a good quality separate charger

3. "I can't be bothered with either 1) or 2). I bought the batteries and they work for me, not the other way around. If I get shorter battery life from in-scanner charging, I'm OK with that."

My choice is 3). :)

There IS an answer to the "backup battery problem" with a LiIon pack. Kenwood (among others) makes available for their HTs a battery holder that fits where the LiIon pack does, but takes AA cells. So, you CAN substitute AAs for the LiIon pack. But then you have to carry the separate AA pack, Kenwood charges an unreasonably high price for it (considering it's a piece of molded plastic with a few springs and pieces of wire snapped into it), and its capacity with AA's is of course quite a bit less than that of the LiIon pack.

I think we would loose the amazing small size of the 396XT if it
had an intelligent charger section on the PC board. I like the form factor of
this radio. I could not compare the Kenwood to the 396XT. They were designed
for different purposes...

I don't agree they start out with the same baseline. The 396XT will decode digital,
capture near field signals, and can sweep the spectrum looking for RF peaks above the
noise floor.

Seems it just a matter of preference...

Thanks Bob,

I thought of that process as well after thinking about it. I have it set to not search for tones or nac.
I have the quick save group set the same way...

On Jun 26, 2011, at 4:18 PM, Robert Klamp Jr. wrote:

> Unfortunately yes if you have it set to find ctcss/dcs tones it will not decode the p25 I'm assuming you just heard a data noise. On the other side of the coin you cant decode analog if it is set to decode the NAC. Best way to use close call is to keep the tone decoding off and quick save the frequency if you can and set it for the proper tone decode option after you have saved it to the quick save group. I have mine at quick key 99 so i can check it on fly and I dont have to go searching through the menu for found frequencies.

> out there that work very well.

Yes, Li-ion AA cells exist, but with a terminal voltage of 3.7 volts you can't exactly drop them in in place of normal AAs.

See, for ex., http://www.all-battery.com/li-ion14500rechargeableaasize37v900mah.aspx

NiMH AA are actually comparable in energy storage... 3.7V x .8 Ah is about the same as 1.2V x 2.5 Ah.

There are of course lithium AA cells with 1.5V but they are not rechargeable. They have superb shelf life and energy density, though (and they're light as a feather! Lithium having an atomic weight of 7, vs. Nickel's 59) so they're good things to just toss in your glove box or keep in your pack as spares. These are the "lithium" batteries you find in typical bubble pack pegboard displays, hanging next to the alkalines.

--- In BCD396XT@yahoogroups.com, "Robert Klamp Jr." <RobertKlamp@...> wrote:
>
> I completely agree about the move to double A's, it gives us a choice on what kind of rechargeable cell we want to use if any at all. And I have never been a fan of charging anything in my radio. I made a mistake a long time ago that made a pro-96 a melted mess. And as for LiIon batteries I have seen double A batteries and chargers out there that work very well. LiIon is the best choice by far in my opinion if you can find the AA's and a good charger they last all day and longer.

Well, the scanner is about the same size as my Icom HT. The Icom
receives and TRANSMITS digital (D-STAR, rather than P25 though :)),
and can receive from 500 kHz to 1300 MHz. However, the Uniden has
the P25, close call and the sheer number of memories that I bought it
for. Horses for courses.

Sounds like you accidentally unlocked everything (will happen if you press/hold L/O for several seconds).

To lock out those searches, while the scanner is in the search you want to stop press F+L/O, L/O (lockout twice).

5565. Preprogrammed Search Question...

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-07-01 00:41:05 UTC
From: Lance
Topic: 5565 Message: 5565

Is there a table in the 396XT Reference Guide or some other document that lists the frequencies that
the radio will search, for the pre-programmed search ranges?

Also, for the range of frequencies within the "Public Safety" search, does the radio take into account
the narrowbanding change from 15.0khz to 7.5khz for VHF-Hi band? I haven't opened the squelch during a search and
manually scrolled to noted the step increments...

Thanks.

5569. P25 Trunking questions

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-07-17 03:54:22 UTC
From: vk2kit
Topic: 5569 Message: 5569

OK, so am trying to monitor a large Motorola P25 astro trunking system.
Have set a single trunk group up with all 30 (ish) control channels covering the entire network. But, now I am mising calls.

When I program the same trunk group with only one or two of the closest control channels, the scanner works fine and I receive trunk calls again.

Another issue.. Can someone tell me how the trunk function operates?
When you scan a trunk group with multiple control channels, does the scanner monitor/scan all control channels continuously or simply vote to the strongest?

If it scans all the control channels, how is the scanner going to respond to a call if it is off scanning control channels that may be out of range? Is this where my problem lies?

Any help would be appreciated..

Cheers all

From: Paul Opitz
Topic: 5569 Message: 5570

If you programmed all frequencies into a single group, then the scanner will stop on the first control channel it can receive. It will not check other frequencies (as sites only ever have a single active control channel at any one time). If the received control channel is weak, then you'll likely miss many transmissions.

The proper way to program multisite is to program each site's frequencies into a separate site in the scanner. Then, enable only those sites that are with a reasonable receivable distance from your location. Then, the scanner will check each enabled site for traffic (it will check idle sites for about 1.5 seconds before moving to the next one).

Using the GPS capabilities of the scanner would automate the process of selecting and deselecting proximate systems. If the problem is weak signals, an improved antenna system could also help.

I usually reject 'test messages' with a reply that the test did work and made the list. Are you certain you did not get that? I would not have had the list tag in the subject, but something like "Message not approved:....."

Anyway, I approved this one for the list, and it did work.

Yahoo has been having problems - particularly with posts from last week.
Some of them are still coming out today. I did find one of your posts
'stuck in the queue' and approved it. It was from yesterday. There is
nothing else in the queue.

I also had a post bounce last week.

Here the link about the Yahoo MTA server problem....

---
delayed messages

Because of a problem related to the fix to our MTA servers last week, one of the servers, which was supposed to be fully offline, was still accepting messages (but not sending them out).

As a consequence, approximately 7% of messages that entered Groups last week were never actually posted to the group archive or distributed via email. This includes messages that were sent via email, through posts on the site, as well as messages that moderators approved.

The good news is that the problem should now be fully resolved and no messages sent today (7/18) should be affected. In addition, the messages that were stuck on the "out of rotation" server are being posted to the group archive and emailed out. * Read More at on the post*

Subject: Re: [HomePatrol] Excellent News on the HP-1

I've never seen Uniden *not* put out anything they promised. That even includes a rebanding update for not only a series that was discontinued, or the series before that, but EVEN the series before that. Why did they do that? Because they said they would. I haven't seen them release UASD for XTs, but I never saw them promise that, either. Maybe they decided that with half a dozen other software authors out there writing for the XT series, they just left the market cover that.

I know of a lot of people who use software other than Uniden's or Uniden products. Same with GRE. In fact, I don't think GRE has any programming software either except for some basic backup software for some of their newer models. So, why should everyone pay for software only to secure software (sometimes paid) from another source? Maybe Uniden is lowering the R&D costs to keep the price of the scanner from increasing. After all, the HP is the same price as the 2-series old T series, and is even lower than the D series that the T series replaced.

And as for the HomePatrol, the nature of the product almost negates the need for software other than to update the database and firmware. Of course, that is about to change.

Joe M.

5579. Re: [HomePatrol] Excellent News on the HP-1

From: shelleysh1@att.net
Topic: 5578 Message: 5579

I have to admit I never cared for nor often used the USAD software for my 396XTs or my 996XTs. There was nothing wrong with it - I used it several times, but it just never "fit" for me. I will say it's fairly uncommon for a manufacturer to successfully produce and support software for scanners. The few times I've seen it done, it hasn't been particularly well. The USAD software was significantly better than what Sony brought to the market with their scanner but personally, I didn't think the USAD software compared too well to the free software which also came on the market for the XT scanners.

The way I looked at the USAD software was that it was something Uniden gave us initially to help program our XT series scanners. I never expected them to take it any further than that their business was and is hardware, not software. The inclusion of the USAD software with the XTs was, to me, a very nice surprise and basically a "perk" to go along with the purchase of the scanner. I didn't expect them to update it or support it! Nor do I remember them saying that they had software engineers who would be doing so. (Though I admit I'm getting to be an old lady and my memory is nothing like what it used to be. *smile*)

As to the HomePatrol ☐ in some respects I agree with Joe that the scanner does almost negate the need for software. It's a brilliant scanner and I really love mine! But, I found, almost immediately, that I DID want software. It was purely logistical. I live in a fairly large metro area and must also travel to and from our state capitol often. With the use of software, programming in the Favorites I need is fast and easy! Doing it manually takes significantly longer and I just don't have the time to spare right now to do so thus software was very important (I didn't want ANOTHER piece of equipment in my car, so a GPS unit was out). The updates are going to be excellent as well both of them!

Which leads me to the last thing I want to mention updates Uniden has been far superior to any other scanner hardware manufacturer I've ever owned as far as firmware updates go! There is no other company I know of which has been so comprehensive and thorough about keeping their current scanners up-to-date, applying "fixes" to any problems, etc.

I have a similar problem. The NSW GRN covers a huge geographic area. My local control channel is Razorback, but I can also pick up Wollongong when I use the antenna on the roof of the house. I receive very few transmissions. The reason for this is there must be a member of the talk group logged into my control channel site. Sydney Ambulance North users will never be anywhere near my local site, so I don't hear any of their transmissions. My preferred channel is RailCorp Security 4, but I only get them about 50% of the time, depending on whether any transits are logged on in my area. If I change the control channel to Wollongong, I can get more of their transmissions, as there is more often someone from that talk group logged in there.

Subject: [BCD396XT] P25 Trunking questions

OK, so am trying to monitor a large Motorola P25 astro trunking system. Have set a single trunk group up with all 30 (ish) control channels covering the entire network. But, now I am mising calls.

When I program the same trunk group with only one or two of the closest control channels, the scanner works fine and I receive trunk calls again.

Another issue.. Can someone tell me how the trunk function operates? When you scan a trunk group with multiple control channels, does the scanner monitor/scan all control channels continuously or simply vote to the strongest?

If it scans all the control channels, how is the scanner going to respond to a call if it is off scanning control channels that may be out of range? Is this where my problem lies?

Any help would be appreciated..

Cheers all

You might want to consider what your needs are, and then inquire about the qualities of each:

-physical size
-weight
-audio quality
-how long does the radio run on a set of good batteries?
-ease of programming?
-is the display easy to read?

Radio Reference has some reviews of both products.
You could google for more reviews.

You could read posts in the forums for both scanners up on Radio Reference, get some first hand experiences from owners...

No close call, but it has search functions and RF Power Plot, both capable of more than close call if they do what they say it will. I find close call pretty useless for any real use.

That all depends on what you want it to do and were you are located.

The XT is better in dense RF environments (urban areas) while the 106 is better in more rural areas. Also, each has unique features that only you can say if those are wanted features.

From: AAR9SM
Topic: 5581 Message: 5589

As others have said it depends on the features you want and need. If you are planning on listening to Mil- Air or Vhf and Uhf in my opinion and comparisons I have done with the same antennas inside and outside and with the ATT feature on and off the 396xt and the 396T both pick up Vhf and Uhf transmissions much easier whereas the Pro-106 does not even break squelch on the same freqs.

On the other hand if you are mainly monitoring 700/800 MHz area the 106 does very well in this area and cannot be beat in digital decoding. And I do have a copy of test ran on a variety radios that confirm this as well.

Remember these test were not done by me. From what I can determine it was written by Credit Jeffrey Pryor, Don Starr, Mike Vander Veer for material in this document. I can send a copy to whoever would like one let me know. Below is just a bit of info included.

That compares the GRE made PRO-2096, PRO-97, PRO-2055, and PSR-500 to the

Uniden PRO-83, BC246T, BC780XLT, BC796D, BCD396T, and BC996T. This is a bench test for

raw sensitivity and does not test overload, desense etc. A single signal is applied to

the scanner and the squelch control is set at minimum.

Fluke 6060B Signal Generator

Wavetek A151 20dB Attenuator DC-2000 MHz

Pomona 2249-C-36 RG-58 cable (Belden 8262), 3 feet long, -0.6dB @ 900 MHz

Audio isolated detector circuit

Fluke 8050A meter, DC scale, dB function

20 dB Quieting Test, All Channels NFM Mode except PRO-83 and PRO-2096 FM mode

When judging sensitivity blanket statements are not useful as there are variations for

each band among the radios. At VHF-LO and the civil air band all the radios are about

equal except the BC780 which is worse than the others. On the VHF-HI band there is a

spread of sensitivity values with the BCD996 best and the BC780 worst; my PSR500 was

less sensitive than most other radios on VHF-HI. On the Mil-Air band the 2096 is by far

the worst since it wasn't really designed to cover that band. Among the other radios the

PSR-500 is worst in this band. At UHF frequencies the PSR-500 is also the worst and in

general GRE radios are not as sensitive as Unidens at UHF. At 800 MHz The PSR-500 and

BCD996 are the most sensitive, and the BC780 is the worst.

I want to buy a new scanner witch is better 396xt or 106

I'd disagree, here the 106 couldn't decode MECA very well even in the city limits, wouldn't even hear the CC most of the time at home while the 396XT and HP-1 both decoded it fine at home. I tried it with several antennas, inside and out, even on two outside antennas and the only one that it actually could receive the CC on was a 70' high discone and it still only had one bar while the 396XT with the same 1 bar decoded the system fine and the HP-1 had 2 bars and excellent decode. The HP-1 typically does better on 800 and decode of digital better than anything out now.
Just an fyi all three radios were connected to the antenna through a DLI multicoupler (16 channel)

On the other hand if you are mainly monitoring 700/800 MHz area the 106 does very well in this area and cannot be beat in digital decoding. And I do have a copy of test ran on a variety radios that confirm this as well.

5591. Earpiece for 396XT

(Cross-posted to Carmachicago yahoo! group)

I already own the Shadow earpiece (ordered from Scanner Master). I am looking for something similar to the NB 400 or NB 700 (as listed on Scanner Master) that would be compatible with the 396XT. Any/alll suggestions welcome.

Brian Riley

I do like my GRE/RS scanners but also like the above post here on the ILL-700/800 Digital Starcom statewide system my 396XT decodes the system great almost everywhere in my home with a RS rubber duck but i cannot find a good spot anywhere to get a good constant signal on my GRE500 using the same antenna...They (GRE) advertized the 500 as the best decoding scanner but here in my area its not true, maybe other locations are better....

The reason I asked is because I don't see a PL search option in the "Custom Search" edit options and my 996XT doestn't seem to detect or display a Pl in "Custom Search" mode.

It does detect and display a PL if a frequency is entered as a channel in a Group and scanned and even will search for a PL when scanning.

Clark,

You need enable CTCSS/DCS Search in a different menu...

Use the menu key to get to it.

on the 396XT, it's inside Srch/CloCall Opt

Then you want: Tone/Code Search. Go inside this menu, and select CTCSS/DCS Search.

Note: if you have this enabled, and you run across a digital signal, it will not decode P-25 Audio...

5599. Re: Saving unidentified TGs for later labeling?

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-07-28 00:50:13 UTC
From: chavalo007
Topic: 5551 Message: 5599

I take the lack of response as an indication that the BCD396XT has no such feature. :-) I basically need to flag new, unidentified TGs so I can come back later and label them. The only solution I see is to periodically check RadioReference and then compare with what I currently have loaded to see if there are any new ones that the scanning community has identified.

The feature is sort of like what you can do in the Trunker application, where it saves any new, unidentified TGs and you can choose to add a label for them.

Thanks!

Use FreeScan and it will log all hits, you can then compare that with known ID's and add the new ones. Or you could use Unitrunker too. Either way it will log all TGID's and UID's as well.

5604. System/Group Scanning

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-01 21:15:11 UTC
From: tuckyguy08
Topic: 5604 Message: 5604

As part of my programmed configuration I have ICIS (Mot Type II/P25) setup on it's own system, and then the majority of Los Angeles area and surrounding cities combined into 1 (Mot Type II/P25) (Los Angeles) and 5 (Conventional) other systems (Los Angeles NE, Los Angeles NW, Los Angeles SE, Los Angeles SW, and Los Angeles W).

I have much more programmed, but isn't necessary for my question.

It appears my scanner stays in only one system and doesn't go to the other systems. Now some of it is to be expected because of GPS settings locking out areas I am not in. However, it seems if I am scanning ICIS for instance, it doesn't include other systems which may be in the GPS area at the time. I hope I have described this well enough for you to get the idea.

Is there some sort of setting I may have accidently clicked to cause this? I don't think I have always had this issue. For instance, I want to monitor ICIS as well as local fire and law enforcement that are not part of ICIS but in the geographical area I happen to be in which is programmed correctly and works great. I just need all to get along together.

Any ideas?

Thanks,

Tuckyguy

If HOLD is flashing in the display, then you are in system hold mode, and this would result in the scanner only monitoring the currently selected system. Press and hold HOLD again to return to normal scanning.

Otherwise, you might have the system /site quick keys for the other systems disabled or the systems might be locked out.

I was thinking of another possibility, too: That the HOLD TIME is set excessively long. I always set the HOLD TIME to 0 so the scanner does not swell on a particular system any longer than necessary.

5607. Re: System/Group Scanning

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-01 22:55:50 UTC
From: tuckyguy08
Topic: 5604 Message: 5607

I think pressing and holding the HOLD button is what I was looking for. I knew it had to be something simple. I can't wait to take it out to the car, hook it to the GPS and start cruising to try it out.
After I posted this I discovered FreeScan has a check box to auto load GPS data so I reloaded a bunch of my systems and locked out the old to see how it works! CHP and LASO were my primary headaches.

Thanks again for the help UpMan!

I followed the procedure and unzipped both files but keep getting an
error message:
Can't find object

Thanks

From: cm8919
Topic: 5610 Message: 5610

I have trouble after I run step 3 Run BC_VUP
After I click Ok to run.
Get error message:
The scanner is not an object to BCD396XT
Rewritting is impossible

5611. BCD396XT Intermediate Frequencies / image reception

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-03 00:22:21 UTC
From: ANDY - WY5V
Topic: 5611 Message: 5611

In looking up the specifications for the scanner I find the following information:

1st IF: 380.7 to 380.8 MHz / 265.5 to 265.6 MHz
2nd IF: 10.8 MHz
3rd IF: 450 kHz

I know that there is an IF shift feature. But before I use it, I want to know if there is anything special about 7.66 MHz. The reason I ask. I have discovered that when two particular transmitters are on the air, I hear them both on another frequency. Here are the stations involved:

162.400 KEC56
154.740 KLD811
147.080 RX only

KEC56 is the local NWS All Hazards Radio station. So it is on the air continuously. When KLD811 keys up, I hear them both on my scanner on 147.080. Here is the arithmetic:

162.400 - 154.740 = 7.66 MHz
154.740 - 147.080 = 7.66 MHz

So, does anyone know if there is anything special about 7.66 MHz inside the BCD396XT?

Andy

What version BC_VUP are you running? Some of the
later versions seem to have issues on some OSs.

Also, are you using a serial port, a serial adapter, or the USB-1?

What you are describing has nothing to do with the XT - or any radio for that matter. It is classic 2A-B intermod (AKA mixing). Where it is mixing could be anything from the PA of the NOAA transmitter to a loose connection on your roof. It could also be mixing in the front end of your receiver.

CTCSS will only help if the 147.080 frequency CTCSS is different than that used on 154.740 MHz. Or, you can use an RF filter (AKA cavity) which may or may not help the problem. It will help if the mix is in the front end of your receiver. It will not help is the mix is anywhere else.

You would likely hear the same thing on any receiver tuned to 147.08 MHz.

The only significance of 7.66 MHz is that it is the separation of the A and B transmitters, and of the A transmitter and your receive frequency.

The same thing will often happen with any two transmitters where you are trying to monitor a frequency that is 2A-B MHz away.

In your case:

162.400 = B
154.740 = A
147.080

BTW, you can TRY the IF shift, but if the mixing is external the product
is already on 147.080 MHz, so nothing will help short of filtering out
147.080 MHz (which would adversely affect your reception on-frequency).

You COULD also try the ATTenuator on that channel. That may solve it.

This looks more like a classic 3rd order intermodulation
scenario. Are one or both of the signals particularly
strong? Anyway, let's see the math:

2x(154.740) - 162.400 = 147.080 MHz.

The question is whether this is happening in the scanner's front end
or external to it (most often it happens in the radio, though
external factors can sometimes cause intermods).

One last comment. This differs from image reception in that image reception is the reception of a *single* frequency that is 2X MHz away from your intended receive frequency. The X would be the value of your receivers 2nd I.F.

For example, receiving 162.400 MHz on 140.800 MHz would be an example of image reception. (using a receiver with a 10.8 MHz 2nd I.F.). The IF shift would definitely solve this issue.

Th issue is to determine if the interference is internal or external to the scanner. If it's internal, the attenuator may help, otherwise you will need to filter out one or both of the offending frequencies. If the source of interference is external, it would need to be tracked down, and if under your control (e.g. corroded antenna connector), get it fixed, otherwise there's not much you can do except use a directional antenna pointing at the desired 147.080 MHz source, along with CTCSS to minimise unwanted squelch openings.

It looks like it is mixing occurring in the front of the receiver. I set my service monitor to generate a signal on 154.740 and as soon as I placed it into GENerate mode, it duplicated the event. I turned the IF shift on for that channel but it made no difference. I was performing a 2 meter audit using the logging feature of Free Scan. I'll just have to handle that particular frequency manually.

Thanks,

Andy Carstarphen - WY5V

Assuming a 15 kHz channel plan (correct me if you're using a 20 kHz plan): Is the problem an issue on 147.075 MHz as well? If not, can you simply lock out 147.080 MHz from the search?

You could also try the notch filter (cavity or shorted stub) tuned to 162.400 MHz which would do two things:

1. Get rid of one of the intermod products (which should eliminate the mix since it's in your receiver), and

2. Likely increase the sensitivity of your receiver, as the 162.400 MHz transmitter must be pretty strong where you are located.

If you have the problem with those two frequencies, you may have the same from say 162.400 and 154.770 ending up on 147.140 MHz. It's always a good idea to attenuate a strong RF signal near your receiver's location.

You could also put say a Micor or MASTR II front end in line with your scanner, but that would likely reduce the sensitive range to a MHz or so. Since you have the generator, you could easily tune one of those front ends to the band of interest.

I've put notch cavities on equipment located at the same site and had usable reception as close as 60 kHz away from the transmitter. You are dealing with a much easier situation.

Texas currently uses a 20 KHz band plan. I will simply use a different radio to monitor that frequency for activity. Of the nearly 300 frequencies I have programmed in, this is the only one that has encountered the problem.

73,

Andy Carstarphen - WY5V

Sounds like it's the front end of the scanner that's causing the intermod.

What version BC_VUP are you running? Some of the
later versions seem to have issues on some OSs.

Also, are you using a serial port, a serial adapter, or the USB-1?

Based on the error message, I suspect one of the following:

1) You have a BCD396T, and not a BCD396XT.
2) You have not correctly set the port number to match the port the scanner is connected to.
3) You failed to unzip the "scn" file (Step 2) and are trying to apply the "zip" file to the scanner.

I had the same issue. Be sure your COM port is properly selected. For instance, the COM port I use in Freescan is COM port 5, but the upgrade assumes COM port 1. It does however, allow you to select it just before installation to the radio starts.

The BCD396T UASD will not work on the XT series. Uniden never released a UASD for the XT series. You will have to use aftermarket software, but there are several packages out there ranging from free to expensive, and from basic programming to just about anything you would want to do.

RR usually gets updated pretty quick and often has rebanding data on
prior to the rebanding actually happening. That would all be described
on the system description.

Hello,

I am in need of getting a new set of batteries for my BCD396XT. Just wondering if anyone has been using any of the newer LSD eneloops made by Sanyo and are rated at 2000mah? If so what kind of runtime do you get with the 2000mah batteries? I would like to have the sometime that would give me the longest runtime and I read somewhere that there were some 2900mah batteries available but the eneloops would be a better solution. I use the radio almost daily but sometimes don't that is why I was leaning toward the eneloops since I have some I use with a digital camera and so far I have not had to charge them but once. Just wondering what do you suggest as I plan on buying soon.

Thanks,

Joey

The batteries that came with my scanner were 2250mah. I usually charge, or have on the charger, the batteries daily. They lasted easily one full year before I started to notice a drop in performance. I replaced them with a name brand (headquartered in St. Louis) 2300mah battery. So far so good. I wanted to keep the mah as close as posible to the original equipment. Just my input.

I think the Eneloop batteries are great. I use them in several digital cameras, as well as my portable scanners. I don't typically use the portable scanners every day, so I can't really say how long the batteries might last in hard daily use, but I love the fact that they can remain in my equipment for months (really!) and still work when I want them to.

Not too long ago I did some research on those 2900mah batteries and apparently that's not the true reading. They are only available from bottom end second rate manufactures who are manipulating the numbers and the testing process to get that reading.

My favorite set of batteries has been Duracell's. (not the pre-charged ones, but the regular rechargable) The set I had were 2650mah and they were fantastic. Unfortunately something happened to them or my charger last year when I moved and two of them keep coming up bad (along with about half of my rechargable batteries).

It looks like Duracell has reduced them to 2450, but I would still recommend them.

Jeff,

Thanks for replying, mine were also 2250mah. I also noticed that after a year the battery capacity just went down hill and got to the point that they would not hold a charge at all. I will do some more looking and see what is available, I was thinking about getting some high capacity LSD batts to use but will see what other options exist.

Thanks,

Joey

I switched to the Eneloops and am very happy with them. I think the run time is comparable to the original batteries plus these retain a charge in storage which is great for my use. I have three sets for my 396XT and rotate through them. When I travel I take all three sets with me and get through a typical weekend this way and recharge when get home. I use them in my HP-1 too.

Thanks for all the replies, I was looking at the Maha Imedion 2400 AA Low Discharge Batteries in compairsion to the Sanyo Eneloops that are rated at 2000mah, I was thinking about going with the Maha Imedion 2400 because they have 400mah more capacity over the Eneloops. What are your thoughts and comments on this, I have really heard good things about the eneloops but some gain in capacity is worth looking at. Again I really appreciate your help with this and I just can't seem to make up my mind.

Thanks,

Joey

It sounds like everyone has had good results with Eneloop batteries. Could someone post a link or recommend where to buy them? It looks like the Eneloop batteries are only available in 2000mAh. Even though that is lower than the factory-supplied 2250mAh batteries, are the Eneloop 2000mAh still recommended?

Thanks!

I really wouldn't get too hung up on the rating, and go more by how long they last in your devices. I have bought all my on http://www.amazon.com

The only small bad thing with them, is they use to come in these very cool re-usable packages. You could use them to store the batteries and they snapped open/close and was really nice. Was a very cool and usefully idea.

Now they come in disposable packages, that can't be used to store the batteries and have to be thrown away. Very disappointing.

It sounds like everyone has had good results with Eneloop batteries. Could someone post a link or recommend where to buy them? It looks like the Eneloop batteries are only available in 2000mAh. Even though that is lower than the factory-supplied 2250mAh batteries, are the Eneloop 2000mAh still recommended?

Thanks!

I personally would not get to hung up on them ratings. Buying 2 is not that expensive. I would recommend buying 2 of the Eneloops and given them a test drive. I doubt you would be disappointed. I use them in everything and am very happy with them.

I did a little research and the Imedions have a higher rating then the Eneloops. I would google them as I
don't have the link available to where you can get them.

Side note:

I've run the Energizer 2450mah. I've had a few them go bad.

I also have the Powerex 2700mah which last in the radio quite a long time.

Charger is the MH C401FS which can charge up to four batts individually so 3 is perfect for radio.

Eric,

That is the link I wanted to post. They have the Imedions. 400mah more capacity per cell then Eneloops.

This has been discussed before, so it's worth searching through the group archives. I don't think there's a single "best" software package. Pick one that others think is good and suits your needs and budget. I use Freescan, which seems to do all I need, and the price is right as a bonus. I'd certainly recommend taking a look at Freescan.

I also use freescan as it works well with and I have never had any problems with it not working correctly. Of course if your programming cable is like mine make sure you have a serial port available that works and you should be good to go. If you have a laptop you will probably need to purchase a usb to serial adapter to make it work unless your cable is already usb (mine wasn't). If you need one here is the one I purchased.
http://sewelldirect.com/usbtoserial.asp

Take care and goodluck!

5653. Fleetnet Whitby Tower

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-11 13:24:13 UTC
From: Rob Jones
Topic: 5653 Message: 5653

I'm not sure if this is a Fleetnet issue or a Uniden issue, but I was driving along the 401 the other day, with both my 396XT and 346XT tuned to Fleet net. The 396 has the digital talkgroups programmed and the 346 is all analog. Well I switched from King City to Mowat towers with no problem, but when I hit Whitby the 396 went quiet; the 346 kept receiving. If I hit hold on the 396 I could hear the control channel rattling away. So I put the 396 in search mode and it started pulling in the ana log talkgroups, same as the 346. After a few minutes the digital talkgroups started pop ping up so I put the 396 back into scan mode. It worked fine after that.

I'm at a loss as to why it would suddenly stop receiving the digital channels for a few minutes while the analog ones were just fine. Has any one else ever noticed something like this?

Rob

Probably not anytime soon as Uniden is preparing to release two major updates for the home patrol 1. What do you feel needs to be updated; the only thing I can think of is maybe better decoding on LSM P25 simulcast systems. They can't add any new modes like TRBO or P25 X2-TDMA or Phase 2 because that would require new hardware in the radio and cannot be added with a simple firmware upgrade. Also I would like to see the alert colors stay on for the duration of the delay time you have the channel set to, often I hear a dispatch and turn around a second too late to see what the color alert was(I'm not big on audio alerts on channels) only to have to run over and look at the display that is still holding the channel since I have the delay set to 5 seconds and the color channel alert only stays active for about two seconds other than those couple of things I don't think there is anything else I would want to change about the radios they work and sound great. I would really like to see the channel alert color time extended to the duration of the delay of the channels that way you couldn't miss it, in my opinion that would make a great scanner prefect.

While I'm not the original poster, I can think of two.

Allow more than 500 TGID/UID per system (This one has been discussed a lot already and is apparently not going to be possible. Doesn't mean it isn't needed though.)

Support the "rectangular" geo-location method as introduced in the latest HP-1 update (Provided it works, and gains acceptance into the RR database. Circles just don't cut it for some systems.)

I'd like to see Startup Quick Keys and GPS lockout work independently of each other, do that one doesn't override the other. Pointless to have two features that essentially do the same thing.

No, it's ONE update and an additional UPGRADE if you want to pay for it, not two additional updates..... Difference being update is FREE and Upgrade you pay for and they will be "packaged" together in one download to make it easier for those who already pre-purchased a key or will buy one later.

I would like to see it do a better job of decoding P25 simulcast systems. The PSR-800 does a better job, but is clumsy when trying to make talk group changes on the fly.

5665. Change modes on the fly...

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-13 19:27:10 UTC
From: Lance
Topic: 5665 Message: 5665

Can't recall if this is possible.

If I enter a frequency and then press hold to monitor it, is there a way to change demodulation mode
while monitoring? Signal does not necessarily need to be active...

Thanks.

Would I be right in thinking that this problem is really "a fact of life" with Simulcast in fringe (overlap) areas. Also that the degree of the problem is as much, if not more so, a function of the System design and implementation than the performance of the receiver (Scanner).

From: Michael
Topic: 5667 Message: 5667

I've had my XT about two months. At first I could hear the full transmission. Then it cut off and would come back in a second or two. Somehow it cleared up but now it's back to cutting off the transmission for a second or two and is very frustrating. I'm sure there's a simple fix I'm missing but I can't find it. Any thoughts?

Mike

Check to see if you enabled Channel Priority, Weather Priority, or Close Call Priority modes. Close Call Do-Not-Disturb would work fine without the gaps.

Do you have the weather alert turned on? Priority mode? Either of those will result in a loss of reception for a brief moment while the scanner checks the wx and priority channels.

There are a lot of factors. Many systems are set up where you can't hear them outside their boundaries, others are just plain set up wrong and if your radio isn't programmed for the correct timing it just won't work right, poor design, and much more affect things. Simulcast is really a bad and cheap way of doing things. Indy paid for separate sites and so forth in the contract but with "cost overruns" Moto ended up building out a junk simulcast system with out of spec timing. Result is poor coverage, poor reception and that’s just for the subscriber radios. Scanners can't pick the system up in some parts of Marion County..... and Moto is in no hurry to fix it, neither is MECA for that matter..... at least not until a police officer or firefighter die because of it.....

5675. Updates to the XT

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-13 23:48:25 UTC
From: vk2kit
Topic: 5675 Message: 5675

For me, the most useful firmware updates would incorporate the following features:

Incorporate an RSSI based conventional and trunking voting option (The XT already has an RSSI feature built in).

This option would permit say 12-15 conventional channels to be programmed into a single agency vote 'group'. The radio would then select the strongest channel to monitor in the group when the system becomes active. Such a system would also include 'Fast Vote' whereby the receiver immediately selects a channel if the RSSI is above a user nominated level like -90dBm (reduces transmission delays). Restricting the vote group to 10-15 channels will reduce the time taken to actually scan through all channels and stop on the strongest. i.e if the scanner takes 50mS per channel, the worst case scenario would be a delay of 600mS for a 12 channel vote group (without 'Fast' vote enabled).

Improvement to the way the receiver selects which control channel it monitors in a trunking system. At present the scanner appears to monitor the first control channel it hears rather than voting to the strongest control channel (unconfirmed). If the scanner does initially vote to the strongest control channel, it certainly does not re-vote on a regular basis which then causes serious problems when mobile. Once again, the scanner needs to be able to re-vote to the strongest control channel every few minutes (user selectable timing) so that it can check all available control channels in the group to confirm that it is still monitoring the strongest control channel (ideally, this would only occur during periods of inactivity).

Additional improvements:
* Ability to change the default P25 decode level away from '8'. In my local P25 trunking system the auto level usually settles on a value of '10'. I would like to be able to set/force the receiver to use 10 at low signal levels. May improve P25 decode function when mobile in particular.

* Backlight continuously on while mute remains open option (in 'Squelch' mode). I know this would kill battery life, but many people operate the scanner on an external supply and there should be an option to keep the backlight on while the mute is open.

* Have display show 'Data' or similar when receiving a P25 data/control channel. Also, not sure if it does it already, but display 'encrypted' when receiving an encrypted P25 signal.

* Also, at some point, it would be fantastic to allow decoding of TDMA digital modes. For those that say this requires a hardware change, I say rubbish! Digital decoding of any type takes place by a A-D converter/DSP directly sampling the final IF. There is no reason why the same system that decodes FDMA couldn't be used to also decode TDMA. I would say the main reason TDMA hasn't been incorporated is more related to AMBE vocoder licensing 'issues'. At some point Uniden and GRE are going to have to bite the bullet on this issue, if they want to keep selling scanners.

Mine was doing the same thing. Found out it was because I was monitoring the frequencies (that would cut out) in "NFM" mode using the CTCSS setting for that channel. Changed that frequency to "FM" mode and it cleared right up. No more chopping out or losing parts of conversations. My guess is that the certain frquency I was monitoring and having the trouble with as you are stating, hasn't been re-banded yet.

5679. Re: New Batteries

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-14 02:20:27 UTC
From: chavalo007
Topic: 5629 Message: 5679

The Sanyo Eneloop XX's are pretty good. I notice that after a 16 hour charge, the voltage on the BCD396XT shows 4.1 (on the top right when you press the volume knob down once), and then quickly drops to 3.93-3.98. After an hour or so, it drains much slower with continuous use, and tends to really go slow and give hours of use in the 3.7-3.8 range. I can't remember what my original battery life was with the original factory ones, but it seems to be much better than I was getting in recent weeks.

What is considered good battery life for the BCD396XT?

Thanks!

It does not display ENC when scanning because it
does not dwell on transmissions you cannot hear.
It moves on to transmissions you can hear.

Actually, there are no scanners that can receive/decode FDMA transmissions either (AFAIK), and one that can reportedly decode TDMA (2-slot).

A lot of people have skewed the FDMA label to include trunked systems, but if you use that line of logic, the entire spectrum is all FDMA - including CB. Trunked systems simply use multiple transmitters operating in the standard single-user mode, hence they are not multiple access at all. One transmitter = one user.

True FDMA has more than one user on the same transmitter at the same time, and the users are divided in the Frequency Domain (hence the FD in FDMA). Satellites use FDMA, I believe. They have one transmitter, but that transmitter carries several slots of users.

Someday when true FDMA systems go on the air in the scanner bands, people will complain that their scanner receives only some FDMA transmissions when the truth is that it never received any at all.

The true test for FDMA or TDMA is whether a transmitter can support more than one user at the same time.

I'm sure this fact will ruffle some feathers for those who would argue that any trunked system is FDMA, but again, those transmitters can only support one user at any given point in time.

I would say the main reason TDMA hasn't been incorporated is more related to AMBE vocoder licensing 'issues'. At some point Uniden and GRE are going to have to bite the bullet on this issue, if they want to keep selling scanners.

One thing I have observed is some older radio systems use FM vs NFM for transmissions. Cutting out, or clipping can be caused if the radio is in NFM mode and the wider deviation of the FM mode of the transmitter is exceeding or "bandpassing" the receiver. An analogy is like trying to move a large couch thru a small door, the extended edges of the couch get clipped by the narrow door width...

I'm sure other's will chime in.

There is a state transmitter that I had this issue with. So, had to change that freq. to FM mode...

That shouldn't be a problem in 2 years as everyone should be NFM in 2013,
and systems are being upgraded daily to NFM....

It seems that high peaking voices dispatching seem to cause "clipping", i have put the "PL" in search mode and kept the "NFM" mode and the clipping stopped....Its mostly on loud volume dispatchers....I have a ham friend who speakes very loud in his mike , people are always telling him his transmissions are all chopped up=back off!!!!!!...

What you are describing is typical of an FM transmission being received
in NFM mode. The transmission is exceeding the passband of the scanner.

Correct solution: Change the scanner to FM mode.

Despite the fact that all Land Mobile users between 136 and 512 MHz are
supposed to be NFM by 17 months from now, about 90% of the users in my
area are still FM, and I bet it's a similar story all over the USA.

The XT series scanners default to NFM in the AUTO mode, so the only way
to receive something in FM mode is to set the mode specifically for FM.

Seeing the number of users here changing I doubt the number here is more than 50% of those left to change over. Many have opted for the statewide system while others are taking advantage and either getting their own trunked systems or upgrading and updating their VHF or UHF systems with even more channels. There are days when as many as 10 agencies are re-upping their license with NFM changes. And surrounding states are doing the same either joining their statewide systems or going NFM.
Even a small town I used to live in has gone through the process, adding 5 channels and getting everything to NFM almost a year ago and they don't have a lot of money to work with.

Where I'm visiting, I had to change a state freq. from NFM to FM...

Some small towns, in poor states take awhile...

Thanks to everyone for your suggestions on how to get my scanner to give me the full transmission without cutting out for a second or two. I believe the problem was the weather alert. After the post telling me to check for alerts, I also noticed that the word, Weather, was on my screen. Since I turned it off, it has disappeared and I can now receive full transmissions. Thanks to everyone for this group because as a novice it gets very frustrating when you just can't figure something like this out but you really don't just want to give up either. Thanks!

Mike

I was quite disappointed to find out that using the emergency weather causes it to cut out like that. Also there is no option to have it only check when scanning as there in Close Call.

How could anyone possible want this "Feature" on the way it cuts out what u r listening too? For 500 dollars I would expect better.

Hello,

You would need 2 receivers. As is, there is less of a chance to miss the WX Alert Tone. If WX is more important, consider a dedicated WX Radio.

There is only one receiver, so there is no way to check for a weather alert without moving the receiver from the active frequency.

You could have a WX-DND, but the chances of missing an alert would be pretty high - especially if you monitor a lot of active frequencies. So, it really would not be reliable that way.

I use dedicated weather receivers. Sometimes if I'm not scanning, I may put the scanner on the weather alert, but the only way to reliably have a weather alert while scanning is to add a second receiver, and that would significantly add to the price of the scanner.

If it can't check without the unbearable skips, sure wish they tried for a WX-DND with a disclaimer or something. I was really excited when I read about it being able to do that, but after trying the feature, and finding out it was basically making my radio useless, was disappointed. I also can't use priority scan for the exact same reason.

That use to be an issue back in the 80's when I use to scan channels, and I figured they come up with a way to check without leaving the current active channel. After all, a lot of things has changed since then in the electronic field.

Thanks for taking the time explaining it to me. (that they need 2 receivers to do this).

It's possible on a trunked system given certain conditions (usually limited by the TG being a priority TG and limited to the same trunked system), but for conventional frequencies you need to check the frequency for activity and the only way to do that is to leave the current frequency to check if the priority one is active, or add a second receiver that can check it while the main receiver is on the active frequency.

Yes, electronics have come a long way, but physics has not changed in quite a few years, and I don't expect it to change for many more. There is no way to sample a second frequency without leaving the current one.

What MAY change is the speed at which the priority frequencies are sampled, but of course the more priority channels you have the longer it will take to sample them. I have a GE radio that is so good the only time you can hear the sampling is when there is a constant tone on the current channel. But, it is only sampling one priority channel at a time.

I do like your idea of WX-DND, but there would likely be too many liability issues. As it is, they have a warning that it should not be relied upon to warn of life endangering situations. Adding WX-DND means it would easily miss warnings entirely, and that would make the WX Alert feature largely useless.

"for $500 I'd expect better" ..... WOW! That’s a pretty sad statement. I guess all the R&D (years in some cases) and license fees, and the need to feed, clothe and put a roof over a family mean nothing to some people. You want more then go buy a Motorola radio and spend $3000 to $5000 for it and see what you get. You'd soon learn the 396XT is a pretty good deal!

I was quite disappointed to find out that using the emergency weather causes it to cut out like that. Also there is no option to have it only check when scanning as there in Close Call.

How could anyone possible want this "Feature" on the way it cuts out what u r listening too? For 500 dollars I would expect better.

Was just my opinion. As I said earlier, I just assumed the skip wouldn't be there as it was in earlier scanners. (talking 80's and 90's).

I guess in a place with little action it would be usable. In my area the skip is long enough that it can't be used.

When I expressed my dissatisfaction, it was placed more at not being to use a cool feature. Not at the scanner and certainly not at other users.

Sorry to offend anyone.

I only tried to have one, it being a talk group in a trunked system. It's our police talk group where all the exciting stuff comes from.

I only scan a handful of traditional channels.

No digital as far as I know.

I use it all the time, not 24/7 but if I know weather could be an issue.... I watch the news for the weather, then if I am out and they expect bad weather I have it on. I'm in a very busy area, with 3 large (user wise) trunked systems, constant chatter and rarely a dull moment and it works fine. The trick is only using it when you absolutely must, not 24/7 since the chances of something severe enough to warrant NWS dumping an alert is pretty slim 90% of the time. I also have one priority on Conventional channels and 5 on a trunked system, even those get turned off at certain times.

I *think* the XT series will only 'honor' trunked priority while
scanning that trunked system. You should not be hearing gaps that are
that long. Are you sure you don't have any conventional priority channels?

What is the sampled interval per priority channel?

5705. Re: [BCD396XT] Incomplete transmission

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-15 16:50:15 UTC
From: Paul Opitz
Topic: 5667 Message: 5705

Correct. For trunked priority, all priority info comes from the subaudible data
on the voice channel. You'll never have a break in audio for trunked priority.

5707. Re: [BCD396XT] Incomplete transmission

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-15 18:59:09 UTC
From: David Klippel
Topic: 5667 Message: 5707

I have mine set 10sec and find that to be tolerable for one priority
channel of the local PD.

5708. What's the latest firmware version?

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-16 16:49:56 UTC
From: jspink1@att.net
Topic: 5708 Message: 5708

I just picked up my scanner again after a long sabbatical - I'm at firmware version 3.02.02 - What's the latest?

5709. Re: [BCD396XT] What's the latest firmware version?

Yahoo group: BCD396XT (2011 — 2014)

Topic: 5708 Message: 5709

Well, the latest version for the BCD396XT (this group) is v1.08.14.
So, I suspect you have a BCD396T (http://groups.yahoo.com/group/BCD396T). The latest for it is at http://info.uniden.com/UnidenMan4/BCD396TFirmwareUpdate and is v3.02.02.

From: Alex
Topic: 5675 Message: 5710

Actually, one update I'd like to see is a decoder added for ATSC audio. With the digital switchover and NTSC transmitters going dark, it's no longer possible to listen to a TV broadcast.

You'd need a much wider bandwidth, and besides, I'd need DVB-T for
this to be of any use to me. Same deal around here, analog was
switched off 3-4 months ago.

You'd also need a higher MIPS processor. In order to extract the audio, you must completely decode the data stream (which includes video and multiple audio streams).

In many cases multiple video streams, too, correct?

Quite expensive (as compared to NTSC.) While NTSC audio is transmitted
4.5MHz above the video frequency, ATSC audio is embedded within the
ATSC signal. Not as simple as receiving NTSC audio.

when enc. is used on ditgal, the radio blocks out even the enc sound, not like radio shack pro-106 that lets you hear the enc sound, is their a way to by pass that block, so you can hear the enc sound, i know you will never be able to hear the radio traffic talking on enc, but it would be nice just to hear the enc sound

Short answer: No.

If you want to hear the 'garbage', you can program the frequency in
using CTCSS/CDCSS SEARCH mode and it will not decode the signal at all.

Most people feel the Uniden scheme is superior to the GRE scheme,
which as you said just puts out noise on encrypted channels.

Personally, I would rather scan channels I can hear as opposed to
hearing noise on channels I cannot understand.

Lots of good stuff and ideas beyond my simple thoughts here. I would still like the simple chance to put a delay on ANY channel not just a system. And why not 1 thru 5 seconds on the delay time. Sometimes 2 is too short and 5 is too long.

Are there any other ideas for updates outside what we have been throwing around?

The more I look at what the XD does the more I think wow. It really can't do too much more. Good job from Uniden.

On GRE's you have the choice of hearing the encrypted noise, a busy tone or just silence like Uniden.

Hi all,

More than likely the XT will go the way of the 396T and the dodo bird, especially with the upgrades and the new changes of the Home Patrol. Uniden doesn’t have a great track record supporting past products.

So, buy yourselves the Home Patrol and sadly we will have to suffer with all those suggestions over there.

Thanks,

Ray

Here is a partial list of Uniden's track record of supporting past products:

BC296D/BC796D: Last update released 6 years after the product was discontinued.
BCD396T/BCD996T: 7 firmware updates released over product life, including major update to add new features (for free).
BCD396XT/BCD996XT:2 firmware updates released so far during product life, including update to add new feature (for free).
BCT15: 2 firmware updated during product life, including update to add new feature (for free)

If i might make a comparison.

Manufacturers of other electronics devices dont support devices much past a year or two for updates.

I work in the wireless industry and right now am focused on a lof the the current and past Android devices by HTC, Motorola and Samsung.
Sure its not a strait forward comparison but still some what related. The Samsung EPIC is still waiting for a major update from Samsung. The phone is around a year old and is already approaching End of Life.
The HTC EVO 4G is slated for another minor udate then its End of Life. Most handset manufacturers give major support the first 12-18 months. After that were lucky for any updates or support.

I think Uniden and Paul have done a pretty good job at keeping the deviecs updated as best as possible. I have a 996T and 396T and am very happy with both. Probably will be for years to come.

5728. Re: [BCD396XT] No Updates.....enough already

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-19 15:56:29 UTC
From: John
Topic: 5723 Message: 5728

bought a new printer a year or so after Vista came out and Brother refused to make an updated driver (and still haven't) that would work in Vista for that model and it was only 6 months old..... Uniden does a MUCH better job of things than most companies. At the moment I am fighting a parts supplier over a tie rod that lasted all of 9 months.....$110 for a tie rod that can't make it a year!

Lots of good stuff and ideas beyond my simple thoughts here. I would still like the simple chance to put a delay on ANY channel not just a system. And why not 1 thru 5 seconds on the delay time. Sometimes 2 is too short and 5 is too long.

Are there any other ideas for updates outside what we have been throwing around?

The more I look at what the XD does the more I think wow. It really can't do too much more. Good job from Uniden.

Quite expensive (as compared to NTSC.) While NTSC audio is transmitted 4.5MHz above the video frequency, ATSC audio is embedded within the ATSC signal. Not as simple as receiving NTSC audio.

Lots of good stuff and ideas beyond my simple thoughts here. I would still like the simple chance to put a delay on ANY channel not just a system. And why not 1 thru 5 seconds on the delay time. Sometimes 2 is too short and 5 is too long.

Are there any other ideas for updates outside what we have been throwing around?

The more I look at what the XD does the more I think wow. It really can't do too much more. Good job from Uniden.

Quite expensive (as compared to NTSC.) While NTSC audio is transmitted
4.5MHz above the video frequency, ATSC audio is embedded within the
ATSC signal. Not as simple as receiving NTSC audio.

Well since the only upgrades/updates that have come out recently were to the
HP his comment sure seems aimed at the HP and and not the XT's and there is
no "D" in it.....

Set the Control Channel Only setting ON in the search options. I don't
have my scanner handy to tell you exactly where that is.

I do not have a BCD396XT but I do have the 996XT so I'm hoping they're fairly similar.

Menu
scroll down to Search for....then select.
scroll down to Edit custom then select.
select freq range
scroll down to set C-Ch only then select.
select C-CH only mode and then select ON.

Hopefully this helps.

Dennis

5745. Channel stays open

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-22 14:43:03 UTC
From: petepry@bellsouth.net
Topic: 5745 Message: 5745

I have a 396xt also a 346xt and having the same problem on both radios. Margate FD dispatch which is part of Coral Springs; the radio stays open on dispatch channel. This just started about 2 weeks ago. I have set up the reband when Coral Springs first rebanded. The control frequencies I have are;
853.87500
853.62500
852.5500
852.3000
The group for dispatch is, 49712.
Any help will be appreciated
Pete

Assuming it isn't an actual stuck mic, two setting on the scanner might be suspect:

1) Be sure your squelch is not set too low.
2) Be sure End Code Detect is enabled for the system.

5752. System hold time

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-08-30 19:12:35 UTC
From: Matt
Topic: 5752 Message: 5752

Just purchased my 396 and new to the group. Am trying to learn this radio AND the Illimois Starcom system at the same time. I used to think of myself as technically oriented, but these have my head spinning. I am plowing through it and getting it day by day.

My question pertains to hold time or delay. On the conventional systems, is there a way to adjust the delay or hold time for individual frequencies? I'm using ARC-XT and it looks like I can only set the delay for the whole system. In the past, I never set delay on repeater freqs, because there's a delay built into the systems, anyhow. I'd only set delay on simplex freqs.

I'll probably be back with more questions.

Thanks,
Matt Collins

System hold time and system delay are two different things. I can tell you for sure that the system delay can only be set for the entire system you are scanning. I myself, in my own honest opinion, hate it. I would much rather set the delay for each channel, whether it is in a trunked or conventional system. The system hold time has some cool advantages once you learn them. I feel your pain with the learning curve. It took me months to even feel slightly comfortable using the scanner. It is a marvel of technology.

Just purchased my 396 and new to the group. Am trying to learn this radio AND the Illimois Starcom system at the same time. I used to think of myself as technically oriented, but these have my head spinning. I am plowing through it and getting it day by day.

My question pertains to hold time or delay. On the conventional systems, is there a way to adjust the delay or hold time for individual frequencies? I'm using ARC-XT and it looks like I can only set the delay for the whole system. In the past, I never set delay on repeater freqs, because there's a delay built into the systems, anyhow. I'd only set delay on simplex freqs.

I'll probably be back with more questions.

Thanks,
Matt Collins

Thanks guys for the replies. Bob, I'm up in Mc Henry. Just retired from Hoffman Estates FD. May take you up on that. I've belonged to CARMA for 20 years, back when they used to send out a newsletter by mail. They're a great resource for Northern Illinois in general.

It's a steep learning curve, but I have the time, I guess.

If its a 396XT press "menu",scroll to the "system" or site you have programmed for Starcom and press"E", scroll thru the menu till you see "Hold Time" then press "E" and set it..My local towers i "hold" for 2min, those in outer areas i have "0" hold time...I remember 20 years ago and more with CARMA as i was "ILL-9" when we had #ing.....

5758. Loud audio clips when using PL tones

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-02 19:18:52 UTC
From: jwpottberg
Topic: 5758 Message: 5758

Hi, haven't posted for a while, was wondering if there is a firmware update that fixes this problem. With certain transmissions I get dropouts during audio peaks when using PL tones (both DPL and CTCSS). The problem always goes away when I turn off PL tones (set to Search or None), but of course I then get unwanted transmissions. Normal or quiet transmissions never have the problem. I have also compared the same transmissions using the same PL and mode on my BC246 and have never had the problem with it. I have had my 396 for over 2 years and have gotten the impression the loud audio overpowers the PL filter so it can't hear the tone it is set to. I say this because in Search mode during those audio peaks you can see the tone that is decoded change or stop altogether. I have seen other posters with this problem and some say to change the mode from NFM to FM, but I have not had much success doing this.

I have to say that overall I really love this radio and obviously this glitch does not stop me from using it, but it sure would be nice if it didn't have it :)

Thanks for any info
Jim

The problem is likely use of NFM to AUTO mode on an FM user.

Try setting the mode to FM and see if the problem goes away.

He said he had trouble even if he changed the modulation from NFM to FM. That said I have never run into this problem. Has anybody else out there experienced this glitch. I'm thinking it may be a hardware problem. I have never seen it not decode a tone or stop decoding a tone mid transmission and I use my 396 as a frequency counter some days when I tune my Motorola two ways and I would think if anything would overload it a radio being keyed 3 or 4 feet from it would duplicate this problem. Best advice I have is to call Uniden tech support and see what they know about it and maybe send the radio in to get serviced.

Hope this helps,
Bob

Ooops! Missed that.

It is possible the user is using a mode that is not NFM or FM, or is using FM and have their radios set out of spec.

It's also possible the scanner is off frequency far enough to cause a problem, although this is pretty rare with Uniden scanners.

Actually, if the BC246T works fine, the only issue left I can think of
is the possibility that the unit is off frequency and requires service.

I have mentioned this before that here in the Chicago area on my GRE and 396XT of "LOUD" dispatchers ex: Kendall Co Sherrif and CPD-City Wide2 with very loud audio and i have had to set the scanner to "FM" and actually put the PL on "search" to get rid of the "clipping"....I don't think his radio has a problem other than what i just printed....

5764. BCD396XT:After adding GPS, all my groups are locked out

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-09 12:33:43 UTC
From: DonaldC
Topic: 5764 Message: 5764

On my BCD396XT, after adding GPS for the sites (ONLY), all my groups are locked out and I can not get them back on. I did not turn on GPS for Groups at all.

Normally I would be able to hit function and a number and have the group turn on (or at least go through the menu an unlock them which they already show as unlocked). Also the display shows ---------- for the groups.

Now, even with the GPS unplugged, the groups are off.

Any ideas? Thanks in advance!

Don

All dashes in the bottom line indicates no group quick keys are assigned to any group. If they were just disabled, they would show as asterisks.

Thanks for the reply Paul. Sounds easy enough, but when I went back in to check, they are assigned. Also when I try to activate them by pressing func and the group number, I get three little beeps.

Well, that would be normal if no GQKs are assigned (as the display shows).

I'd triple-check the programming. Is it possible you've created two versions of the system and are looking at the wrong one?

In any event, the system you are scanning when G0 ---------- appears definitely has no GQKs assigned, so there is something wrong with the programming.

5768. Newbie trying to find my way

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-10 00:39:14 UTC
From: briandguth
Topic: 5768 Message: 5768

I will try to keep this short and sweet; as I have compiled lots of information in my quest for programming understanding.

I just purchased a BCD396XT. I have never used a radio or scanner before; but I'm a sharp cookie.

I live in St. Louis, MO. We have both City and County police departments. I successfully programmed the conventional system for the County. The city is digital. I can't figure out how to program the digital system, or which data to use. Some folks in STL put together some pages of frequencies; but my feeble programming efforts have only netted me the trash and street departments. Their pages:

http://myweb.accessus.net/~090/scan/stlcitypd10.html
http://myweb.accessus.net/~090/scan/stlfreq.html
http://www.radioreference.com/apps/db/?sid=5747

Tools that I have acquired: a BCD396XT radio, an "Easier to Read" manual for BCD396XT (apparently not for me), ARC-XT PRO software, and a 180 day subscription to RadioReference.com.

Here's a link to ARC-XT PRO screen captures of the data that I have entered into the software:
https://picasaweb.google.com/101076550751701027957/ARCXTPROScreenCaptures

I don't know which list of, and how many control channels to use; which frequencies to use; why RadioReference has different frequencies listed than the local site; if i should use hex or dec, and why my talk groups turn to zero when uploaded to the scanner.

Any and all help would be greatly appreciated! I thank you in advance for your assistance! Have questions for me? I'll answer them pronto.

If you have a file for him you will need to
upload it to the FILES section of the group.

Don't confuse Conventional and Analog......the scanner will determine the correct mode.
Am I correct in assuming that when you say digital, you actually mean "Trunked" ?

It sounds as if the control channels rotate daily, so enter all of them, the scanner will pick the correct one.
ARCXT Pro is a great program. I'm sure there will be negative comments about this program though.

5772. RE: [BCD396XT] Newbie trying to find my way

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-10 14:50:28 UTC
From: Cris Hanna
Topic: 5768 Message: 5772

Hi Brian, I live in Belleville and work in Creve Coeur so I'm familiar with all the systems you're trying to program

You say you have a subscription to RR and the programming software

Have you attempted to import the frequencies you want into the software from Radio Reference? It sounds like you're trying to manually enter the data into the software

From: BCD396XT@yahoogroups.com [mailto:BCD396XT@yahoogroups.com] On Behalf Of briandguth
Sent: Friday, September 09, 2011 7:39 PM
To: BCD396XT@yahoogroups.com
Subject: [BCD396XT] Newbie trying to find my way

I will try to keep this short and sweet; as I have compiled lots of information in my quest for programming understanding.

I just purchased a BCD396XT. I have never used a radio or scanner before; but I'm a sharp cookie.

I live in St. Louis, MO. We have both City and County police departments. I successfully programmed the conventional system for the County. The city is digital. I can't figure out how to program the digital system, or which data to use. Some folks in STL put together some pages of frequencies; but my feeble programming efforts have only netted me the trash and street departments. Their pages:

http://myweb.accessus.net/~090/scan/stlcitypd10.html
http://myweb.accessus.net/~090/scan/stlfreq.html
http://www.radioreference.com/apps/db/?sid=5747

Tools that I have acquired: a BCD396XT radio, an "Easier to Read" manual for BCD396XT (apparently not for me), ARC-XT PRO software, and a 180 day subscription to RadioReference.com.

Here's a link to ARC-XT PRO screen captures of the data that I have entered into the software:
https://picasaweb.google.com/101076550751701027957/ARCXTPROScreenCaptures

I don't know which list of, and how many control channels to use; which frequencies to use; why RadioReference has different frequencies listed than the local site; if i should use hex or dec, and why my talk groups turn to zero when uploaded to the scanner.

Any and all help would be greatly appreciated! I thank you in advance for your assistance! Have questions for me? I'll answer them pronto.

Thank you for clarification! With regard to Conventional and Analog, I'm still unsure of the specific differences between systems. Yes, when referring to digital, I am describing a trunked system. One local site says: "St. Louis City's radio system is an 800 MHz Motorola Type-II Trunked Radio System".

On RadioReference they have red, blue, and black labeled (colored fonts) System Frequencies. Red (c) are primary control channels and Blue (a) are alternate control channels. Black are ??? Put all 18 in, regardless of color? In addition, the local folks have another listing of frequencies (http://myweb.accessus.net/~090/scan/stlfreq.html#citytrs) All in all, I see 36 separate frequencies. Put them all in?

Thank you for your insights!

Conventional is non-trunked, it can be digital and or analog or both, mixed. with the XTs you don't have to be concerned if the Mode column (ARC XT Pro) is "Auto". And in a trunked system if the Audio Type column is "All".

Black are just voice freqs. You only enter the "output" freqs. , if that is what you are asking.
Sometimes it can be a little confusing when both Uniden and ARC both refer to a grouping whether conventional
or Trunked as a "System", but you'll get used to it.

Good deal Chris! It's good to have a local to commensurate with (I'm in South County)!

I imported the frequencies, etc. from RR. Despite any differences in nomenclature, the software and web site both call them "Conventional Frequencies". In looking at the downloaded data, in the software, there are no locations to input talk groups.

My understanding of systems and terms is still a bit rough; but this doesn't seem like the way to set up a "trunked" system.

I may continue inserting my manual hodge-podge of data and see what I come up with. With regard to software, I've done pretty well with the "press this and see what happens" method of learning. Please le me know if you have any further insights.

5776. Scanning specific systems.

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-12 04:54:23 UTC
From: Matt
Topic: 5776 Message: 5776

I don't know if it can be done, but I'll ask. Is there a way to scan specific systems without disabling all the other systems in the scanner? I want to be able to scan 1 TRS in particular. I've assigned a system number tag using ARC-XT. I use the HOLD / 1 / ☐ / MENU, and it takes me to the control channel for the system but doesn't scan the system. Am I missing something, or am I not able to do this?

Thanks,
Matt Collins

Press and hold the HOLD button to activate System Hold, then scroll to
the System you want to scan and it will scan only that system regardless
of the status of other systems. To disable System Hold, press and hold
the HOLD button again. When in System Hold mode, the HOLD will flash on
the display.

Thanks Joe. Did you mean site vs. system? All the scroll knob does is change direction of scan on a single site system. If I go to a multi-site system, the scroll still makes me go through all the talkgroups before it goes to the next system. Is there a key combo so that I can scroll through the systems only without all the talkgroups.

IMHO, the weak point in this scanner is the scroll control. I don't see the part holding up to any kind of use. A scanner this complex, you would think EVERYTHING would be keypad controlled except volume and squelch, but there I go thinking again.

When I said scroll to the System you want to hold, you use FUNC then the
scroll knob to change Systems.

I had the same question also after just acquiring this scanner last week.
Thanks for the info.

However, I might be TOO new to make this intuitive yet.

I pushed FUNCTION then scrolled the top knob until I find the system I want.
Then what? When I pushed the scroll knob, it stops on the system, but
consistently tells me "nothing to scan" even though the system chosen has
groups activated at all times. What am I doing incorrectly?

Make sure the system is scannable (i.e. it is unlocked and its Quick Key is enabled).

Thanks guys. The learning curve has gotten shallower. Between here, the "difficult to navigate" cd manual, and the "Not that Easier to read" Scanner manual book, I'm slowly getting it.

Matt

This is, in my humble opinion, one of the very few short comings of this otherwise amazing scanner .... in one operation, the ability to navigate directly to and scan a specific system WITHOUT having to first enable the it's quick key ... is there any chance of that feature being added ?

Thanks,
Mike

Make sure the system is scannable (i.e. it is unlocked and its Quick Key is enabled).

Just dont assign the system a quick key then it scans all the time until you lock it out. Other than that how much easier can it get, before dynamic memory we were limited to 10 or 20 banks that only held a set number of channels and the banks still had to be turned on or off using the keypad. Now instead of banks we have 100 system quick keys supplemented by 10 group quick keys for each system. And all you have to do is punch in the number to turn on any system you want function plus the number to toggle any group quick key you want it doesn't get much easier than that if you read through the manual a few times and use the scanner a couple months operating it becomes second nature in my opinion. These radios are amazing dont sell them short it takes some time to learn its ins and outs but after that you'll wonder how you ever scanned the air without it.

Do you have the system locked out or have a quick key for the system locked out? I had the same problem, but always found a way to make it work after fiddling with the scanner a bit.

I had the same question also after just acquiring this scanner last week. Thanks for the info.

However, I might be TOO new to make this intuitive yet.

I pushed FUNCTION then scrolled the top knob until I find the system I want. Then what? When I pushed the scroll knob, it stops on the system, but consistently tells me "nothing to scan" even though the system chosen has groups activated at all times. What am I doing incorrectly?

Is there a way to display the PL or DPL of an unknown signal being picked up? I want to not only save it in the XT, but also be able to program it into other radios.

Yes.

Set the channel for ANALOG ONLY and
select SEARCH for the CTCSS/DCS.

Or, if it's a Close Call or SEARCH hit, enable the
CTCSS/DCS SEARCH in the Close Call / Search options.

If it's on a programmed channel, it will show what the tone or code is
and will give you the option to program it into memory if you hit the
ENTER button. For CC or searches, it will show the tone or code, and
will program the code with the frequency if you opt to program it into
memory - also by hitting the ENTER button.

Use the CTCSS/DCS Search function when you bring up the options menu.

That is essentially the same thing as PL/DPL.

From: Jerry Mader
Topic: 5794 Message: 5794

Hi there.
I'm Jerry Mader.
I am blind and am not yet a BCd#96XT scanner user but am trying to learn all i can about the radio before i get it.
I have these questions about it if you wouldn't mind answering them.

I was wondering if you could explain what the weather alert sounds like when it goes off?
I'm thinking it might sound like the fire whistles at the fire halls do when they go off. But am i right?
Also what do the other nine tones sound like that you can select for the other alerts?
Also how is the reception of apco25 capability?
I know with my gre scanner i used to have it wasn't all that good. My system that is down here in Saginaw Michigan, is running a multi-site system and there's only 1 yes, i know crazy huh? But it's true, only one control channel frequency for the whole thing so the reception is not all that good with the pro96 I have.
It cuts in and out and then when it does come back in it static's allot like the sound of the digital signal but with no voice.
Plus i like the ability to scan trunked ltr systems.
Oh and how does NAC work is it just like the ctcss coding by chance or is this another kind of trunked set up?
Also when you set the scanner up to listen for the emergency alert flag on a talk group is this flag tripped when the portables or regular radios hit that emergency alert button I've heard central talk about allot that people bump from time to time or is this something that central invokes to let the officers know there's an emergency?
Just wondering if anyone would know.
Oh and one more question. If you have your scanner set to tone out, and it's searching will it stop on the transmition so you can hear the transmition before making a decision to store the tone or won't I be able to hear anything while it's looking for tones?
Thanks for your time and explanations in advance.
I am working on getting this scanner for either my birthday or for Christmas and am trying to learn everything i can about it.
Jerry Mader

boy you ask a lot of questions!
This http://f1.grp.yahoofs.com/v1/wDZ-Tg9R22lOIiCHcfQZdDp6s0uenAou3x3yjTNZUR0b_DHxQMdpwClOosc48P1SY_3UThJzQRZ7FmRd1yrJASSJPmM0RM8/Alert%20tones%20and%20volume%20settings%20sounds.mp3
is a recoding of all 9 tones I made. Then I took one of those tones and went through all 15 volume settings
the gap in the middle was when I was moving it to the alert volume settings.

On toneouts I havent seen anywhere where there is a list of the tones for saginaw. The scanner will in toneout stay on a programmed toneout for 1 second, then move to the next. In the mean time maybe one of the previous ones is being toned and you would miss it?

Personally I would just set the fire dispatch talkgroup on a priority so then you can get them all. In a digital priority the scanner has to listen on the control channel so that means if you are say scanning another area that is not using the control channel, you will not get the fire dispatch during that time until the scanner comes back to the digital system and its control channel.

Hi there.
I'm Jerry Mader.
I am blind and am not yet a BCd#96XT scanner user but am trying to learn all
i can about the radio before i get it.
I have these questions about it if you wouldn't mind answering them.

I was wondering if you could explain what the weather alert sounds like when
it goes off? I really do not know, I have not heard it go of yet, I have only had it three days. I'm thinking it might sound like the fire whistles at the fire halls do
when they go off. But am i right? There are 9 choices and you hear them when you choose them.
Also what do the other nine tones sound like that you can select for the
other alerts?
Also how is the reception of apco25 capability? So far it seems to be good, a lot has to do with your antennaa good outdoor antenna will make a big differance, and I have three other rubber duck type antennas that I use for better receptionwhen I'm out doors.
I know with my gre scanner i used to have it wasn't all that good. My system
that is down here in Saginaw Michigan, is running a multi-site system and
there's only 1 yes, i know crazy huh? But it's true, only one control
channel frequency for the whole thing so the reception is not all that good
with the pro96 I have.This scanner will run many differant formats, so pick the one you need and program it.
It cuts in and out and then when it does come back in it static's allot. sounds like an antenna problem
like the sound of the digital signal but with no voice.
Plus i like the ability to scan trunked ltr systems.
Oh and how does NAC work is it just like the ctcss coding by chance or is
this another kind of trunked set up? Yes it is simmaler, The system can capture the nac codes and sdd them to the system frequancies.
Also when you set the scanner up to listen for the emergency alert flag on a
talk group is this flag tripped when the portables or regular radios hit
that emergency alert button I do not know, The only alert I use is the clored or flashing lights, in your case this would not help. Not sure if a tone can be set...I've heard central talk about allot that people
bump from time to time or is this something that central invokes to let the
officers know there's an emergency? I do not Know
Just wondering if anyone would know.
Oh and one more question. If you have your scanner set to tone out, and it's
searching will it stop on the transmition so you can hear the transmition
before making a decision to store the tone or won't I be able to hear
anything while it's looking for tones? I think it just auto stores it not sure...or you can set a delay time .so that you can press a key combination...
Thanks for your time and explanations in advance.
I am working on getting this scanner for either my birthday or for Christmas
and am trying to learn everything i can about it. You may also want to look into the Home

Patrol, it may work better for you...

boy you ask a lot of questions!
This
http://f1.grp.yahoofs.com/v1/wDZ-Tg9R22lOIiCHcfQZdDp6s0uenAou3x3yjTNZUR0b_DHxQMdpwClOosc48P1SY_3UThJzQRZ7FmRd1yrJASSJPmM0RM8/Alert%20tones%20and%20volume%20settings%20sounds.mp3
is a recoding of all 9 tones I made. Then I took one of those tones and went through all 15 volume settings
the gap in the middle was when I was moving it to the alert volume settings.

On toneouts I havent seen anywhere where there is a list of the tones for saginaw. The scanner will in toneout stay on a programmed toneout for 1 second, then move to the next. In the mean time maybe one of the previous ones is being toned and you would miss it?

Personally I would just set the fire dispatch talkgroup on a priority so then you can get them all. In a digital priority the scanner has to listen on the control channel so that means if you are say scanning another area that is not using the control channel, you will not get the fire dispatch during that time until the scanner comes back to the digital system and its control channel.

5799. Motorola Band Plan Question...

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-25 15:59:49 UTC
From: Lance
Topic: 5799 Message: 5799

I had to change the Motorola band plan settings for a Control channel only search in the 406 mhz band.

So if you enter only the lower limit, the offset, and spacing, BUT do not provide upper limit, will the radio

still search and decode control channels? or do you have to add the upper limit.

I understand there are custom setups for motorola systems in this band. Not everything starts at 406.000, not all systems utilize all channel

assignments. I was just looking clarify this for a generic control channel search in this band.

I've noticed in the Pro-197 you just tell the radio the base, offset, and spacing. It does the rest.

Thanks,

-Lance

Jerry, Hi my name is Mike and I am south of you in Fenton Michigan. I work in the Saginaw area on Tue and Thursday's. I have both the 396XT and the new GRE PSR-800. I think being that Saginaw is using simulcast you may get better reception with the PSR-800 depending on your location. I have taken the 800 with me to work to listen and it does A pretty good job. I will have to see if I get time and take both the 396XT and PSR-800 and compare them on the system. If you want to check them out we could meet up for lunch sometime.

Mike

Just out of curiosity, have you considered buying the Uniden HP-1? I own both the 396XT and the HP-1 (along with several others) and unless I'm missing something here, I believe, with a little help from a sighted friend (or possibly even on your own), you could pretty quickly program the HP-1 and have it setup exactly like you want. You can also use it in a slipcase on a belt, just like the 396XT, with a handheld antenna.

Well I've thought about it but it's my understanding that it has a touch screen.
I wanna be able to feel the buttons to be able to change programming should i have to on the fly or to do a close call search and then lock it in.
Thanks for the ideas though.
If that HP1 didn't have a touch screen that'd be my scanner lol I'd buy it but it's not too accessible to me as i can't see the screen.

Hello there.
Just wondered how often does Uniden upgrade the firmware.
I know when i had the radio shack brand of scanner it wasn't updated quite a lot.
I was only wondering do they support a scanner once it's discontinued or do they stop making firmware for the unit all together.
I'm just curious.
Later

Uniden has had firmware updates for discontinued models, but generally
once a product is discontinued, the frequency of updates drops. For
current production units, the frequency varies depending on what (or if)
bugs are found or features are added (which is rare for features to be
added, but it does happen).

Maybe you guys can help me with this one. Every few minutes, my XT stops on a (trunked) channel and the only sound that comes out is digital buzz saw noise. It sometimes lasts a couple of seconds then scan resumes, but sometimes it is just stuck there until I hit SCAN.

I'm in the Reno, Nevada area, if this is any factor.

My first thought is a talkgroup that is used for data only.

It is a trunked channel programmed as a trunked System, correct?

The sounds are a ditgal transmission trying to get thru, most of the time when you hear these, the transmission will come thru in the clear after a second or two

My first thought is a talkgroup that is used for data only.

It is a trunked channel programmed as a trunked System, correct?

I'm not sure what the setup is. I loaded this from RR / XTPro last year.

When it hits, it may be on any of several different talkgroups. I haven't looked to see if they are always on the same frequency.

It could be interference on that one frequency.

Or, that transmitter might be off frequency.

Now I don't know much about the BCD396XT but I'm pretty good with radio systems.
Could it be MDT(mobile data terminal) data? Or could it be Encrypted transmitions?
Just a small thought.

5814. Search and Store...

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-28 17:23:58 UTC
From: Lance
Topic: 5814 Message: 5814

I have a custom search bank.

I wanted to do a search and store on this custom search bank.

However, my custom search bank is not listed when try to select it for search and store. Only systems are listed.

The custom bank is Unlocked.

So what is missing here. Should be able to do a Search and Store on my programmed search bank(s).

Thanks for suggestions.

-Lance

5815. Figured out Search and Store

If it were interference, would it show me talkgroups?

If it were off frequency, it would be for short bursts. It will run until I hit Scan -- sometimes it has taken several minutes (when I've been elbows-deep in working on the car, for instance). Then it doesn't hit for several minutes, sometimes an hour or more.

I love a mystery, don't you?

Yes, it would show the TGs, as those come from the control channel.

As for being off frequency, I have some other digital scanners that tend to drift off frequency. Sometimes they decode - sometimes they don't - sometimes they start decoding mid-transmission. So, yes, that is still a possibility.

As for intermittent problems - yes, they are the best. ;->

5818. Custom search

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-28 22:52:35 UTC
From: andre m
Topic: 5818 Message: 5818

When i program a custom search between 470-471 my bcd396xt doesn't pick up any signal analog or digital, i live in the Los Angeles area and theres a lot in that band, is there a setting that will allow a search in the 470.000s. I get a lot of activity with my old analog scanner in this area. i know theres something there Thanks

5819. Re: [BCD396XT] Custom search

If you have tone code search "ON" the radio will not decode Digital signals...

You need to set up your own custom search range. There is not just a "setting".

Under Search in the main menu, go to Custom Search...set up from there...

Have you enabled Control Channel Only for that search? If so, it will only look for control channels. Also, I'm assuming you have that slot enabled when searching (if not, press the slot number to enable it).

5826. Receiving Saginaw county's system on the BCD396xt

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-29 10:50:10 UTC
From: Jerry Mader
Topic: 5826 Message: 5826

I hope this isn't off topic and if so I apologize but Had a question about the Saginaw County system in Michigan on the BCD396xt.
I was looking over the forum on RR today about the Saginaw County system.
I seen an article on multipath signals .
Here it is for you to look at too.
http://wiki.radioreference.com/index.php/Simulcast_digital_distortion
<http://wiki.radioreference.com/index.php/Simulcast_digital_distortion>
and wondered if anyone ever tried to use the Attenuator on the scanner and how good that worked?
Did it cause the signal to drop just enough to get rid of the problem or did it make the problem worse?
and can you adjust the Attenuation level on a channel with this scanner or is it stuck to only one level of 10 db like my other scanner used to be?.

I can give a report on my question about how well it worked for me, once i get the scanner in my hands come Christmas as well.
I was thinking I'd try it as well, but wanted to see what the rest of you thought and if it worked or not.
Because this exact same problem used to happen to me using my older digital scanner before it went to pots.
I'm not expecting the system to come in clearer with the BCD396XT i just figured ok, time for a better scanner with more features and the ability to scan ltr as i have a few of those systems I like to listen to but couldn't with the older scanner.

I live in Albee township. And even the fire chief whose a friend of mine said to me that his radio gets bad reception half the time where he's located and he's not far down the road from me.

But anyway anyone having any luck scanning that system or is it a bear to scan even after attenuating the signal?
Sorry to ask so many questions i just was curious if attenuating the signal helps solve this issue of distorted digital transmition for anyone scanning the Saginaw county TRS here in Michigan.

As multipath interference involves two signals that are mutually
interfering, adding attenuation would not only reduce the strength of
the second signal, but the first as well, so the interference would
still be there in theory.

Hmm. good point.
But what then would be my best option?
Don't have much to spend on a beam antenna.
What would be a better way to fix this issue?
Thanks

Have you enabled Control Channel Only for that search? If so, it will
only look for control channels. Also, I'm assuming you have that slot
enabled when searching (if not, press the slot number to enable it).

Do you know what and where the "other" signal is? Maybe there is a radio out there that is off frequency or way over the wattage limit. Just a suggestion?

Nope i don't know where the other signal is coming from exactly but here's my opinion on what's wrong with it.
Note: I'm not a radio tech, nor do i work for Motorola, nor am i a police officer of fire officer but have friends who are.
But here we go lol.
I think it's because there's too many towers clustered together on one freq. I wish they'd must move the controlled channels around say and give each one it's own control frequency or would this break the simulcast? For example, Bridgeport would have, it's own control frequency, then birch run, then Saginaw township, then Hemlock, like that.
Not all clustered up together on one frequency.
Like i said it's nuts, and I'm thinking of calling up to central dispatch and saying "look we have a problem here, this is endangering your officers' lives" But i don't think it would do me any good you know.
Like they'd listen to me, some dude with a scanner! lol But still i wish they would.
Ever since this stupid system came online no one has been able to grab it and before they put their system online, everyone could hear the digital system the state police tower in Bridgeport came in awesome.
Now it's not doing so hot.
Also i hear a lot of fire departments complaining about how crappy it is, and that they liked the other system better because For example, when they go into a building and it's on fire, (my friend who's the fire chief told me that Bridgeport Spalding, Chesaning Brady and birch run told him, and he's experienced it too as he's one of the albee chiefs,) they get out of service messages on their radio display and it beeps as if it can't read the ctrl channel, but the emergency medical services don't have any trouble with their radios just fire and police.
So I'm wondering what i could do to help them out.
As i see this as an endangerment to officers' lives here.
Even the State Police division who used to get it to come in good, can't anymore.
So something's dreadfully wrong. A few of my friends on that division told me about it being crazy and as soon as they come in to my area the radios go nuts and can't find the control channel. You can hear it fine but don't try to scan it, it just sounds terrible.
SO should i give central a call on the non-emergency number, and let them know or would this just be bothering them so to speak?
Along with central dispatch, who else can i call to get this fixed, i think they have one tower too strong and the other ones just as equally strong, i think they need one tower maybe, that is the strongest one then the rest should be weak enough that the other controllers don't interfere in my opinion but maybe I'm wrong here.

Simulcasting is very tricky. I live near the IL StarCom system and if you are in an area that is near a cluster of towers like I am then "receiving" a signal into your scanner can be difficult. If you are near, lets say, three different towers and they are all transmitting the same info at the same time (I know this doesn;t happen on a regular basis but it can) the distance from each of those towers is slightly different. I have been told that even a millisecond or three makes the sound garbled. I think (not sure here) the radio or scanner is trying to process the signals at the same time. I know I am wrong here on some level but that might be what is goinjg on.

5833. Locking and unlocking multiple systems

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-30 17:45:56 UTC
From: G S H
Topic: 5833 Message: 5833

I've had the pleasure of owning a BCD396XT for quite a while now and love its feature set and capabilities. I have it more or less organized in the following manner:

Systems 0 (01, 02, 03, 04, 05, 06, 07, 08, 09, 00) Orange County, NY
1: Battalion 1 agencies
2: Battalion 2 agencies,
etc., etc.
9: Battalion 9 agencies
0: Countywide channels

Systems 1 (11, 12, 13, 14, 15, 16) Rockland County, NY
1-1 Countywide channels
1-2 Station 201 agencies
1-3 Station 301 agencies,
etc., etc.
1-6 Station 601 agencies

Systems 2 (21, 22, 23, 24, 25, 26, 27, 28, 29, 20) Westchester County, NY
2-1: Battalion 1 agencies
2-2: Battalion 2 agencies,
etc., etc.
2-9: Battalion 9 agencies
2-0: Countywide channels

Systems 3♯, 4♯, 5♯, etc. (same pattern as above)

Right now if I'm not interested in monitoring a specific county (say Rockland), I press ./no and 1, 1; ./no, 1, 2; ./no, 1,3; etc., untill all six systems are removed from the scan list. Is there a way to add or delete an entire S♯ line of systems all at once?

There is not, but there is a more logical way of doing what you want.

Rather than assign 10 systems for different agencies on the same system,
assign them to the same system and use the 10 Group Quick Keys for the
different groups. That way, you just have to disable one System.

Topic: 5833 Message: 5835

I believe, if you are in the scan mode just push the appropriate system number. You don't want to listen to system 3 any more, push 3. That simple.

I've had the pleasure of owning a BCD396XT for quite a while now and love its feature set and capabilities. I have it more or less organized in the following manner:

Systems 0 (01, 02, 03, 04, 05, 06, 07, 08, 09, 00) Orange County, NY
1: Battalion 1 agencies
2: Battalion 2 agencies,
etc., etc.
9: Battalion 9 agencies
0: Countywide channels

Systems 1 (11, 12, 13, 14, 15, 16) Rockland County, NY
1-1 Countywide channels
1-2 Station 201 agencies
1-3 Station 301 agencies,
etc., etc.
1-6 Station 601 agencies

Systems 2 (21, 22, 23, 24, 25, 26, 27, 28, 29, 20) Westchester County, NY
2-1: Battalion 1 agencies
2-2: Battalion 2 agencies,
etc., etc.
2-9: Battalion 9 agencies
2-0: Countywide channels

Systems 3♯, 4♯, 5♯, etc. (same pattern as above)

Right now if I'm not interested in monitoring a specific county (say Rockland), I press ./no and 1, 1; ./no, 1, 2; ./no, 1,3; etc., untill all six systems are removed from the scan list. Is there a way to add or delete an entire S♯ line of systems all at once?

5836. RE: [BCD396XT] Receiving Saginaw county's system on the BCD396xt

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-09-30 21:39:09 UTC
From: Jerry Mader
Topic: 5826 Message: 5836

what could i do to make the other signal sort of go away so that i can listen to the trunking system would anyone have any suggestions? just trying to get feedback here. I know I'm near 2 towers, Bridgeport and i believe there's one in birch run but I'm probably wrong.
But how can I attenuate the other signal to make it not exactly disappear but sort of quiet down so i can get the system to scan?
Any good suggestions?
Jerry Mader

Subject: RE: [BCD396XT] Receiving Saginaw county's system on the BCD396xt

Simulcasting is very tricky. I live near the IL StarCom system and if you are in an area that is near a cluster of towers like I am then "receiving" a signal into your scanner can be difficult. If you are near, lets say, three different towers and they are all transmitting the same info at the same time (I know this doesn;t happen on a regular basis but it can) the distance from each of those towers is slightly different. I have been told that even a millisecond or three makes the sound garbled. I think (not sure here) the radio or scanner is trying to process the signals at the same time. I know I am wrong here on some level but that might be what is goinjg on.

Nope i don't know where the other signal is coming from exactly but here's my opinion on what's wrong with it.
Note: I'm not a radio tech, nor do i work for Motorola, nor am i a police officer of fire officer but have friends who are.
But here we go lol.
I think it's because there's too many towers clustered together on one freq. I wish they'd must move the controlled channels around say and give each one it's own control frequency or would this break the simulcast? For example, Bridgeport would have, it's own control frequency, then birch run, then Saginaw township, then Hemlock, like that.

Not all clustered up together on one frequency.
Like i said it's nuts, and I'm thinking of calling up to central dispatch and saying "look we have a problem here, this is endangering your officers' lives" But i don't think it would do me any good you know.
Like they'd listen to me, some dude with a scanner! lol But still i wish they would.
Ever since this stupid system came online no one has been able to grab it and before they put their system online, everyone could hear the digital system the state police tower in Bridgeport came in awesome.
Now it's not doing so hot.
Also i hear a lot of fire departments complaining about how crappy it is, and that they liked the other system better because For example, when they go into a building and it's on fire, (my friend who's the fire chief told me that Bridgeport Spalding, Chesaning Brady and birch run told him, and he's experienced it too as he's one of the albee chiefs,) they get out of service messages on their radio display and it beeps as if it can't read the ctrl channel, but the emergency medical services don't have any trouble with their radios just fire and police.
So I'm wondering what i could do to help them out.
As i see this as an endangerment to officers' lives here.
Even the State Police division who used to get it to come in good, can't anymore.
So something's dreadfully wrong. A few of my friends on that division told me about it being crazy and as soon as they come in to my area the radios go nuts and can't find the control channel. You can hear it fine but don't try to scan it, it just sounds terrible.
SO should i give central a call on the non-emergency number, and let them know or would this just be bothering them so to speak?
Along with central dispatch, who else can i call to get this fixed, i think they have one tower too strong and the other ones just as equally strong, i think they need one tower maybe, that is the strongest one then the rest should be weak enough that the other controllers don't interfere in my opinion but maybe I'm wrong here.
Jerry Mader

I hope this isn't off topic and if so I apologize but Had a question about the Saginaw County system in Michigan on the BCD396xt.
I was looking over the forum on RR today about the Saginaw County system.
I seen an article on multipath signals .
Here it is for you to look at too.
http://wiki.radioreference.com/index.php/Simulcast_digital_distortion
<http://wiki.radioreference.com/index.php/Simulcast_digital_distortion>
and wondered if anyone ever tried to use the Attenuator on the scanner and how good that worked?
Did it cause the signal to drop just enough to get rid of the problem or did it make the problem worse?
and can you adjust the Attenuation level on a channel with this scanner or is it stuck to only one level of 10 db like my other scanner used to be?.

I can give a report on my question about how well it worked for me, once i get the scanner in my hands come Christmas as well.
I was thinking I'd try it as well, but wanted to see what the rest of you thought and if it worked or not.
Because this exact same problem used to happen to me using my older digital scanner before it went to pots.
I'm not expecting the system to come in clearer with the BCD396XT i just figured ok, time for a better scanner with more features and the ability to scan ltr as i have a few of those systems I like to listen to but couldn't with the older scanner.

I live in Albee township. And even the fire chief whose a friend of mine said to me that his radio gets bad reception half the time where he's located and he's not far down the road from me.

But anyway anyone having any luck scanning that system or is it a bear to scan even after attenuating the signal?
Sorry to ask so many questions i just was curious if attenuating the signal helps solve this issue of distorted digital transmition for anyone scanning the Saginaw county TRS here in Michigan.

Jerry Mader

Do you know what and where the "other" signal is? Maybe there is a radio out there that is off frequency or way over the wattage limit. Just a suggestion?

No. There is no way to lock out multiple Quick Keys unless you use the
Startup Keys.

5838. Re: Receiving Saginaw county's system on the BCD396xt

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-01 17:59:00 UTC
From: dataman60435
Topic: 5826 Message: 5838

Here in ILL we have the IL-Starcom Multisite system, on this system my GRE500 performs awful with constant dropouts on the 700mgz multisite towers BUT, my 396XT performs much better finding a spot here in my home where it gets 4 bars on a tower here in the radio room on a shelf....Thats THIS system yours may very but i have been in your area about a year ago and in the Berian Co area and my 396XT performed very well....I know the MSP system has been in use longer than Starcom and may need a little tuneup.....Just trying to give a little heads up.....

Thanks man.
I appreciate that!
But yeah I know my pro 96 sucked at pickin' it up lol.
I hope this scanner does much better.
I'll know come Christmas.
Now i feel like a kid again waiting on Santa to come.
Take it easy.
Jerry Mader

Subject: [BCD396XT] Re: Receiving Saginaw county's system on the BCD396xt

Here in ILL we have the IL-Starcom Multisite system, on this system my GRE500 performs awful with constant dropouts on the 700mgz multisite towers BUT, my 396XT performs much better finding a spot here in my home where it gets 4 bars on a tower here in the radio room on a shelf....Thats THIS system yours may very but i have been in your area about a year ago and in the Berian Co area and my 396XT performed very well....I know the MSP system has been in use longer than Starcom and may need a little tuneup.....Just trying to give a little heads up.....

What does the digital decode threshold do for the scanner?
How can this help me out?
Just again trying to improve my knowledge of how i can use the feature and what would you recommend the scanner be set to to avoid the multi-path problem that i think is happening?
Thanks Ron.

I believe if your experiencing multi-path problems due to being in the overlap area between multiple simultaneous transmitters, then in general your stuck with it (or move). Some receivers may be a little worse or a little better than others, but I don't think the problem will disappear. Best way I can think of to improve situation is a highly directional antenna, if you are in a fixed location, pointed at the strongest transmitter. digital decode threshold won't help you if you're losing the control channel.

I don't currently know where to get a directional antenna.
SO I'm wondering could the rubber duck help in any way?
I'm trying to find a portable antenna that's directional and i could say, just move the scanner around to find the closest tower.
I really don't know here.

I have the group keys within each system assigned in a standard layout of:

1 - Law enforcement agencies
2 - Fire / Rescue services
3 - Emergency medical services
4 - Other governmental services (highway departments, etc.)
5 - Miscellaneous channels

within each system.

From: Alex
Topic: 5845 Message: 5845

What conditions will generate the "invalid voltage" message? I see this once in a while on my radio when it is plugged in. Not always but once in a while. Pulling the plug and reinserting it usually causes the message to go away.

That means your power supply is providing the wrong voltage. Make sure that you are using the power supply from Uniden. If you are using the correct power supply then you need to purchase a new one. You can buy a power supply at radio shack, a Uniden dealer or Uniden.com web site.

The radio says only 6 volts, no range is given and the references on the Uniden wiki don't list a range either. An actual range would be nice to know should I later want to build a power supply for it.

Either way I suspect it's just a low voltage due to contact resistance as it usually clears up by reseating the connector. If it was an overvoltage condition then reseating wouldn't change it.

Here is a paste from Radio Reference. It discuses current consumption. It does not mention working voltage range, however it has amusing findings...

http://forums.radioreference.com/uniden-scanners/141970-396xt-current-draw-various-led-colors-brightness.html

You could put your radio on a variable voltage bench supply and find out at what two points does the radio display "Wrong Voltage". Of course you would not
want to swing the voltage by too much, as you might destroy the voltage regulator...

Hello guys!
I saw that the last update for BcD396xt was 1.08 , is that correct?
I am a litle disappointed with uniden because I saw at Uniden Australia that they have more often updates.
Can you check at this link if it is correct. Looks like the have another number model:

http://www.uniden.com.au/resources_main/software/UBCD396T_installation_guide.pdf

From: Jeffry Rehm
Topic: 5853 Message: 5854

I use a stereo to mono RS adapter for a couple older Uniden scanners that have mono for the earplug connection. However I use it with a pair of stereo headphones. I really hated hearing transmissions with only one ear. Not sure if it would or could cause problems with a powered speaker.

Good Deal Uniden BCD396XT and accessories $500

Everything like new. I purchased all this stuff in February, 2011. I've paid well over $800 for all this stuff. Will sell for $500, I'll pay the shipping. I'm just tired of listening to domestic disputes all the time, lol. I guess this hobby wasn't for me. I actually just listened using close call and it worked well.
If interested contact:

Me in Northern BC
t7870925@... <mailto:t7870925%40telus.net>

Can pay with Paypal

For sale:

Uniden BCD396XT Scanner
comes with:

AD-1001 AC Adapter
SMA Rubber Duck Antenna
PC Serial Cable 4'
Wrist Strap
Belt Clip (still in package)
SMA to BNC Adapter
CD ROM with Owner's Manual
Misc Printed Literature

Cigarette Lighter Power Cord
Leather Carry Case with swivel (still in package)
Rabbit Earpiece (still in package)
GPS Receiver (roof magnet)
Null Modem Mini Adapter (2)
Mini Gender Changer
Easier To Read XT Manual

Body Holster (WSC-1)

From: Jamie Hanrahan
Topic: 5853 Message: 5859

You should *never* plug a mono phone plug into *any* stereo phone *output* jack. The mono phone plug will short the ring contact in the jack to ground. In an output jack that means you are shorting one of the outputs to ground. It should be obvious why that's not a good idea. (Input jacks are not a problem, though of course only one channel in the jack will be driven.)

You should *almost* never plug a stereo-to-monitor adapter into a stereo phone output jack. However the jack on the Uniden may be an exception.

The reason the adapter is usually a bad idea: Such an adapter connects both the tip and ring (L and R) contacts in its plug to the tip contact in its own mono jack. When you plug this into a stereo output, the two output channels of the device are now connected to each other, and they are not supposed to be.

In almost all audio hookups at all voltage levels, including headphones and headphone jacks, the output drivers are of considerably lower impedance than whatever they're driving.

In line level audio, for example, output impedances are 600 ohms at most, sometimes as low as 100 ohms, while input impedance in pretty much standardized at 10K. It is similar for speakers - power amp output impedance is generally a tiny fraction of an ohm, driving a 4 or 8 ohm load. We do not "match impedances" in audio work, unless you're working on long distance analog telephone lines. And the same is true of headphones and headphone outputs; although the impedances of 'phones can vary a lot the driving impedance is always very low.

So... when you connect two outputs to the same input you are connecting two low-impedance sources to each other, while also connecting them to the high-impedance load. The result is that the two sources nearly short each other out, as they are each seeing a load that's drawing anywhere from 10 to 100 or more times as much current as they're designed for. Severe clipping is almost always the result. One output may even damage the other output.

It is extremely common for people to try this with line level outputs, using a simple "Y" cable to derive a single channel from two. And it is extremely common for them to report that the resulting level is very very low and that it is very distorted. The distortion results from clipping - voltage sag due to the high current loads.

(For verification and more details, see the excellent article "Why Not Wye?" at the Rane Audio web site. http://www.rane.com/note109.html , if Yahoo will let me post that link here.)

With the Uniden's stereo jack, however, there is a likely exception as these scanners do not decode FM stereo and so have no reason to really have two output amplifier channels. In all likelihood they just have one and it is already connected to both the tip and ring contacts in the jack (for compatibility with stereo headsets). Connecting those contacts to each other (as an adapter would do) therefore does nothing that isn't already being done.

FYI. I am not pluging a stereo plug (male) into a mono (female) output jack. That is why I am using the adapter specifically designed for that. The stereo headphone jack plugs into the female end of the adapter (also stereo). At the other end of the adapter is a mono male plug that plugs into the mono jack of the specific scanner.

I just wasn't sure if there were power issues with the adapter and the powered speaker.

Two choices.

1) stereo to mono adaptor.
2) cut mono plug off and replace with stereo plug.

5866. Encryption squelch?

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-12 22:51:24 UTC
From: cjwalsh@ymail.com
Topic: 5866 Message: 5866

Is the BC396xt capable of squelching only encrypted transmissions? For instance, I program all channels that are knowingly encrypted, but I've noticed that frequently those channels go red, and are in the clear, and I only want the radio to unsquelch if there is an open digital channel, instead of getting digital barfs. The rest of the time I would want the radio to ignore stopping on digitally encrypted traffic.

That is basically how it works. I do see mine pause very briefly on an encrypted talkgroup and then proceed with scanning. The squelch does not open during this pause, the only way you would know it is if you are looking at the display.

Occasionally the scanner will pause for longer periods of time and, if I notice this, I usually just temporarily lock out that talkgroup. Not sure why it does that.

5869. Too bad we need Amplified Speakers

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-13 16:06:45 UTC
From: RJH
Topic: 5869 Message: 5869

Hi,

Too bad unlike the 396T we have to amplify the output on the 396XT and I assume the Home Patrol. I like the fact that with the 396T I don't have to plug the speaker into a power source.

I'm trying to remember if in previous models there were two jacks. I guess, Uniden is afraid of getting sued if someone blows their eardrums out with an earphone.

It's another thing we have to plug in now, I wish Uniden could go back to the way it was, where we had good volume using a non amplified speaker.

Ray

Two choices.

1) stereo to mono adaptor.
2) cut mono plug off and replace with stereo plug.

Is the BC396xt capable of squelching only encrypted transmissions? For instance, I program all channels that are knowingly encrypted, but I've noticed that frequently those channels go red, and are in the clear, and I only want the radio to unsquelch if there is an open digital channel, instead of getting digital barfs. The rest of the time I would want the radio to ignore stopping on digitally encrypted traffic.

That is basically how it works. I do see mine pause very briefly on an encrypted talkgroup and then proceed with scanning. The squelch does not open during this pause, the only way you would know it is if you are looking at the display.

Occasionally the scanner will pause for longer periods of time and, if I notice this, I usually just temporarily lock out that talkgroup. Not sure why it does that.

5870. Re: [BCD396XT] Too bad we need Amplified Speakers

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-13 16:33:31 UTC
From: Lance
Topic: 5869 Message: 5870

Ray,

If you run the SMA to BNC adapter and then ground the outside sleeve of the audio plug to the adapter, if will put the audio amp into full output mode...

There are wiring mods you can do to the radio to bypass headphone mode, however this may void your warranty.

Perhaps in the future we will see a setting for this in the "settings menu".

5871. Re: Too bad we need Amplified Speakers

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-13 19:03:11 UTC
From: dataman60435
Topic: 5869 Message: 5871

I thought i read somewhere when u use the wire from the BNC to the external speaker plug on a 396XT and short out the resistor it may cause a problem with the audio amp....I did do that trick on my 396T before i sold it and its OK on the GRE/RS products but has anyone actually used this method on a 396XT safely???...TY

5872. Programming cable question

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-13 23:36:09 UTC
From: Rick
Topic: 5872 Message: 5872

Has anyone found a source of the Uniden 4-pin connectors used on the cable? I would like to repair one cable and make up a couple of special cables and all I need are a few of the Uniden 4-pin connectors that plug into the scanner. I found this site that identifies the connector as the same used among several models of cameras but after searching on these various models I am not able to convince myself it is the same connector.

http://pinouts.ru/DevicesCables/uniden_bc296d_pinout.shtml

Thanks in advance for any help in finding these ocnnectors.

Rick

5873. Re: [BCD396XT] Programming cable question

From: Dean B. Dalrymple
Topic: 5872 Message: 5873

I did some searching a few months ago because I want to make a cable to connect to a GPS. I found a site that identifies it as a standard "4 pin mini USB" I was able to pick a cable that had that connector at one end at The Source (here in Canada) for $2 clearance price. It fits the scanner perfectly, but I haven't had a chance to change the other end of it to see how well it works.

The page I found is
http://www.danreetz.com/blog/2010/03/07/uniden-bcd396xt-non-standard-usb-cable-and-a-source-of-connectors/

5874. TGID easier lock out/enable

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-14 09:03:34 UTC
From: boeing52au
Topic: 5874 Message: 5874

Gday I only want to listen to a few TGID's on a busy P25 site.

Is there any way to enable only those TGID's that I want to listen to without having to L/O each of the unwanted ones as they transmit? It takes a lot of time and button pressing to weed out the unwanted ones.

Or, is there a way to enable only the ones I want to hear?

I think I crashed my 396XT by having so many lockouts in memory. I had to reset it and start again.

Any help appreciated.

Thanks...

Create a group with in your system and program in only the TGs you want to hear. Then only scan that group. Make sure your radio is in ID Scan not ID Search.

Rich

Program only the channels you want to scan into a Channel Group and be sure the scanner is in ID SCAN (not ID SEARCH) mode.

Also, assign a Group Quick Key (GQK) to that group. It makes it much easier when Quick Keys are used. Both
System Quick Keys (SQK) and Group Quick Keys.

Group QuickKeys are numbers 1-9 and 0.
System/Site QuickKeys are number 0-99.

As others have emphasized, make sure you are "Scan" and not "Search".

I never have figured out why that if 20 groups per system are allowed, but only 10 GQKs are available for assignment.

You can assign more than one Group to the same GQK. Or, you can use some Groups that you always want to scan, and not assign them a GQK. Or, you can assign TGs you know, but don't want to scan to a Group, lock out that Group then use ID SEARCH to find new TGIDs.

That's one of the nice things about the DMA scanners. You can set them up so many ways.

All this said, I could use at least 20 GQKs, too.

I knew of the work around, still it's just not the same as having 20 GQKs.
If there is ever another Firmware update, I hope 10 more GQKs per system
would be added.............
it only makes more sense to have the same amount of GQKs as Groups that are
available.
Say using Function/.no/xx(11 to 20) as the key press procedure. Just gives
more flexibility to an already great scanner.

Clark.

5885. Had a question about the buttons on the scanner.

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-17 02:21:02 UTC
From: Jerry Mader
Topic: 5885 Message: 5885

Taking into account that I'm blind i needed some help so i could rewrite a few things in this manual so i can then perform the actions the buttons say.
Where is the scroll control and what does it look like.
2. Where is the power button and is it the same as the scroll control or no?
Also 3. Can i use a pair of stereo headphones with this scanner or do i have to have a mono pair?
and one more question.
5. Does the scanner beep when buttons are pressed?
Thanks a bunch.
Jerry Mader

The scroll control is the big knob on the top of the scanner. It looks like a knob and is the only thing that sticks out on the top other than the antenna connector.

The power button is the lower left button. It is recessed compared to the others. You hold it to turn the scanner on. You tap it to control the backlight (which would not matter to you, I guess).

You can use stereo headphones.

The scanner can beep depending on the user settings. You can set the keybeep to auto which will vary with the volume, or fix it at a set level, or turn it off.

Yes, there is a low battery warning by beeping. The beep is adjustable from
low to very annoying.
I think the level is the same as for key presses.

Yes, there is a low battery beep. It follows the keypad beep settings,
and can be set to AUTO, a fixed level, or disabled. I keep mine on AUTO.

Batt low will beep as long as you have keybeep turned on (same level as key beep)

Also, on the scroll, each step in a menu will also generate a beep. Returning to the first menu item generates a double-beep. These are also same volume level as key beep. (Sometimes it is possible for you to pass a detent quickly and not change menu...or to turn slowly and have the switch "stutter" through a couple of menu items; the beeps will always be the reliable cue).

Yes, there is a low battery beep. It follows the keypad beep settings, and can be set to AUTO, a fixed level, or disabled. I keep mine on AUTO.

It's a different (lower) frequency than the key beep. Is that what
you're asking? It beeps about once every 30 seconds or so. That's just a
really rough estimate. I never actually timed it.

yeah lol sorry for so many questions.
I apologize and thanks for the answers.
That's cool though at least i don't need to read the display all the time. I think this scanner will work great for me.
And i like the way you can control it from the PC.

Can i ask, does it make any beeps on start up that you know of?
Or is it just silent till it starts to find something?
Thanks a bunch guys. This info is helping.

Yes, it does beep when powering on and then again again about 2 seconds
later if scanning or ready to scan,
even if no systems are enabled and display reads " Scan Mode Nothing to Scan".

Most of the time, yes. I'll explain below.

When you power it off normally, it will give the beeps both on power down and again on power up (power down is descending tones, and power up is ascending).

But, if you power down abnormally, such as removing the batteries, it will not give the beeps on power up.

Ok thank you.
I appreciate that.
Does the weather alert sound sound like the Old Civil defense sirens do like back when they'd test them at noon? you know, the ones, on top of the fire halls or is it more like a high low sound or what kind of warble, should i expect to hear.
Just so I'm prepared to hear it.
I already realize how loud it is so I'm prepared for that part of it now what I'm not prepared for is the actual tone and how it sounds.
Sorry to ask i feel like a kid asking so many questions, But i was always taught that if I never asked i wouldn't know the answer.
Has anyone heard it before or?
Thank you.

Hello,

I have a BCD396XT and I have a question regarding the rubber on both sides of the radio. It is used so your hand has a place to grip the radio. Does anyone know if this rubber is replaceable and mine has signs of some wear and I would like to replace it with a new piece from Uniden if is even available. Does any know if this is replaceable and if so hard is it?

Thanks,

Joey

Just adding information to the question about the rubber grip. Mine has worn smooth. It still functions ok but is smooth as can be now on most surfaces. It does get a lot of wear though.

Hey y'all. Gots a radio for sale. BCD396XT Uniden scanner with EVERYTHING! $400

Comes with New batteries(yes, rechargable), AC power cord, stock antenna , BNC adaptor, and 800Mhx stubby antenna. Also, If I can find it, I will throw in a protective full nylon case, with belt loop. (Once again, if I find it, I will throw that it in)

Scanner is only 6 months old. I just need the cash, hate to part with the radio.

MESSAGE ME!!
Dave

5904. learning to use the free scan program and need some help with it a bit.

Ok i have free scan.
And I'm creating a system with 3 sites in it.
I have 1 site so far.
I have a tgid group labeled emergency/ma for emergency/mutual aide.
I am using ez grab to put the groups into the system.
But they're appearing vertically.
What i mean by that is I'm lookin' at the data grid for the tg's and all of them are ending up on the A row.
like for example
I set the first combo box on that tool to tgid and then the next one on display.
And what it's doing is entering the tg's like this. vertically and they're always on row one of the xl table
1634
Fire/EMS
2204
Countywide
1771
Disaster/Comm
1772
Law/co
1773
Fire/co
1774
EMS/Co
1775
Plann
all that's ending up on the A row of the table and not going across.
Is it ok that they end up like that?
Will the scanner scan them properly?
What am i doing wrong here anything?
Thanks
Jerry Mader

From: Steve Wilson
Topic: 5905 Message: 5905

Ok...I'm doing my best to read through the manual and attempting to get this thing out of search mode with no success. I'm not sure how it got into the mode and it certainly isn't intuitive to get it out.

When I press the Scan button, it just goes into some weird mode that is searching HAM radio frequencies. I would expect it to search the selected system(s).

Would appreciate any help before I throw this thing out the window.

Thanks, Steve

When it's searching in SCAN mode, press FUNC then the L/O button twice.
That will lock out the search with scan that it is doing. You should see
it scanning the systems you have enabled and unlocked, too.

Thanks, Joe. Somehow what it is doing is scanning the systems I have on quick key 5, then searching HAM Radio, then it searches FM, then it searches some kind of Custom group. I'm expecting it to only scan the systems with quick key 5. How did these other systems get into the scan process/

Thanks, Steve

I've seen them 'come alive' after a reprogram of the unit.

Other than that, it requires user intervention to enable them.

But, once you permanently lock them out, they should not return. Make
sure you lock them out in software, too.

They could set to on by default in the programming software, make sure
lockout is selected.

5910. trunking an ltr system need help.

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-26 11:28:34 UTC
From: Jerry Mader
Topic: 5910 Message: 5910

I have a system that's LTR but i only see 1 freq in it under radio reference. it says this is the 14th freq i think.
How would i be able to trunk it if all the other ones are blank and this one is not?
What can i do there to find out where the other freqs go?
I have them but don't know the order.
Under the following licenses.
WPNY720 and wqbn728
and there is one more but i don't know if it's being used, call sign is WPLF943.
How can i find out the order these are in.
I don't wanna screw it up so it won't trunk the system.
i have friends who work there at the hotel but they don't know the freqs either.

First, it's not the 14th frequency - it is LCN 14.

Second, there is nothing that requires LTR systems to use consecutive LCNs or start at LCN 1. I have one in my area that is a single-channel LTR system that uses LCN 19.

Third, not having the other LCNs may cause you to miss some transmissions, you should hear any user homed to LCN 14 - especially if it's not a busy system.

So, while there may be other system frequencies, you cannot 'mess up' the system by not having them all - you would simply miss some transmissions on busy systems.

One key would be to look at other talkgroup IDs on the system. There should be an LCN for each talkgroup starting with that number. For example, if you see a TGID of 03-012, there should be an LCN 03.

One thing you could do is monitor the other frequencies to see if you
hear an LTR beacon on them. It should happen about every 10 seconds or
so and will be a brief transmission.

So this is what i have so far.
Here's an example of what all the tg's look like.
0-14-140
So this tells me that the home repeater is on the 14th frequency Am i right?
All of them have that number 14, on their group. and a leading 0 at the
beginning.
So what's the leading0 for?

First, you have to find out if it exists. (do that as I mentioned)

Next, you will have to determine the LCN. Without any outside help,
about the only way to do that on a 396XT is to program a new LTR system
and put the same frequency in with each LCN. The channel that becomes
active will tell you the correct LCN for that frequency. Or, you can
look at the TGIDs. Most, if not all, the ones you see will likely be the
correct LCN for that channel (again, using the 0-03-xxx example - I
forgot the 'area code' before. That's the leading 0- at the beginning).

Something else you could do is see if there is someone with a HomePatrol
in your area. The HP can determine a complete system with just the
frequencies entered using the trunk system analyzer tools.

5917. Re: [BCD396XT] trunking an ltr system need help.

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-26 14:59:05 UTC
From: MCH
Topic: 5910 Message: 5917

The leading 0 is the 'area code' and can be 0 or 1. It's used when you
have more than one LTR system on the same frequency. Everything else you
said is correct. LCN 14 may be the only one active on the system.

5918. RE: [BCD396XT] trunking an ltr system need help.

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-26 15:25:59 UTC
From: Dean B. Dalrymple
Topic: 5910 Message: 5918

>0-14-140
>So this tells me that the home repeater is on the 14th frequency Am i right?
>All of them have that number 14, on their group. and a leading 0 at the

No. The frequencies in an LTR system can be numbered anything. They
can be numbered 1,2,3,4... or they can be numbered 2,4,6,8 or even
5,6,8,10. Since you have said that ALL of the talkgroups are 14, then
that would indicate that there is probably just one frequency on the
system. There might be other frequencies on the system, but finding
their LCN's would take a lot of the trial and error method error I
suggested before.

>So what's the leading0 for?

It really doesn't mean anything. On an LTR system it will be either 0
or 1, and all the talkgroups on a system will have the same number,
either all 0's or all 1's, not both in the same system.

5919. Can these radios be seen by others?

Yahoo group: BCD396XT (2011 — 2014)
Date: 2011-10-26 17:26:44 UTC
From: briandguth
Topic: 5919 Message: 5919

I live in St. Louis, MO and have a BCD396XT. St. Louis City has a digital radio system in place.

One day I was listening to the City PD and some city detective chatter about an incident taking place within a mile or two of my office. Nothing special was being discussed at that moment; but all of the sudden I hear one detective tell another detective that they were being "scanned", and to come to the end of the alley to share some info instead of over the air.

Out of curiosity, does anyone know is the PD has equipment at their disposal to see if a scanner is monitoring their traffic? If so, is there a range (distance) that they can see active scanners?

Any insight that anyone has would be appreciated.

There is no such device. The officer could have:

a) Seen someone with a scanner.
b) Made the legitimate assumption that someone was scanning their open channel.

Maybe scanned meant visually, not just "overheard".

Scanner is a "passive device" and even the Reference Oscillator within the radio is a very minute signal...

They probably noticed from doing covert surveillance that the suspects had scanners...

0 is the area. It is either a 0 or a 1. The frequencies are entered into a LCN (Logical Channel Number).
The BCD396XT only requires that you program the LCNs that have an assigned frequency.
Go here http://wiki.radioreference.com/index.php/LTR for a short explanation of LTR systems.
LTR systems are probably the most difficult to determine the correct LCN if it is unknown.
Many LTR system owners mix and match frequencies from several different licenses to makeup a system.

On busy systems there is also what is called a "go to LCN" , so when the home repeater is busy, the "go to" repeater is used. The difficult problem is that the TG retains its ID (say 1-14-140) even if the "go repeater" is LCN 03 on this system. If LCN 03 is unknown or not programmed, the traffic is missed.

I hope this explanation makes sense.

No they can not be seen. I am sure they were smart enough to know that "some" people do have scanners as a hobby and they were making sure that sensitive information was not given out. In my opinion there really aren't many "criminals" that spend the time we do to learn the newest scanners out here to avaid the police.

I'm not sure what lockout to select, as it seems to be searching other things than the systems that I have assigned that quick key to. Weird.

Those were the same two thoughts that first came to me, though as you say, the reference oscillator would generate only a *very* weak signal.

My other idea was perhaps the detective said it just as a sort of "shot in the dark" so anyone listening (crook or otherwise) would THINK they have ways of detecting scanners.

Trial and error.

Create a system with just one of the frequencies, give it one of the LCN number's you have come up with, and then put in some of the talkgroups. Monitor it for a while and if you don't hear anything, If not try again with a different LCN. Depending on how many frequencies you have, you could just do all of them at once, just create a system for each one and name each system something unique so that you can easy remember them or make note of them. I did this with a small system and it only took a few hours to sort everything out.

You would set the lockouts on the Service Searches that are unlocked. Lock/Unlock is not the same as enabling/disabling quick keys.

It's a bit like the days when we had analog phones here (prior to
2000), I used to often say "Oh, and hi to all the scanner users" when
on a long call. Never found out if anyone ever heard that on their
scanners! :) Yes, monitoring phones was and is illegal here, but a
lot of people did it, until digital mobiles and cordless phones took over.

From: jb853
Topic: 5932 Message: 5932

I have encountered a problem wherein if I turn off all the group quick keys within a system and try to scan, I can't turn them back on-I get the expected "Nothing to Scan" message but then am unable to get the group quick keys back on. The system and groups are not locked out. The only workaround I found was to utilize programming software to re-program the system with the groups turned on. Can anyone help?

5933. Re: [BCD396XT] Group Quick Keys

Hold down the FUNC key till the F blinks, now rotate the knob till you find the System your looking for. Then depress the key corresponding to the group within the system you want to enable. Press FUNC key again after to take the radio out of FUNC mode.

All my systems and groups have a number before the description so that I can easily find which system and group I want to scan. Also when scanning, I know which system and group(s) are active. Also helpful when your in MENU mode looking at programmed systems you have a way to associate the system with a number and the thus the quick key assigned to a particular system.

So for example:

0 Close Call
1 Mutual Aid
2 USFS
3 CHP
4 Santa Barbara County
5 Airshow
99 Qck Save Conv Grp

I'm visual so this is how I can quickly know the quick key to any system assigned.

Assigning quick key 0 to Close Call is helpful for scanning tagged frequencies in real time...

Hope that makes sense and helps.

Some LTR systems are interesting to monitor. In my area (Los Angles),
several ambulance services are very active.
Many agencies contract out their ambulance transport.

We actually have an LTR system in a county North of me that is used for all county law enforcement including the Sheriffs Dept., all the smaller towns in the county PD's and county Community Corrections types including juvenile probation officers.

0 is the area. It is either a 0 or a 1. The frequencies are entered into a LCN (Logical Channel Number).
The BCD396XT only requires that you program the LCNs that have an assigned frequency.
Go here http://wiki.radioreference.com/index.php/LTR for a short explanation of LTR systems.
LTR systems are probably the most difficult to determine the correct LCN if it is unknown.
Many LTR system owners mix and match frequencies from several different licenses to makeup a system.

On busy systems there is also what is called a "go to LCN" , so when the home repeater is busy, the "go to" repeater is used. The difficult problem is that the TG retains its ID (say 1-14-140) even if the "go repeater" is LCN 03 on this system. If LCN 03 is unknown or not programmed, the traffic is missed.

I hope this explanation makes sense.

Did you mention you had a buddy that works where you wanted to monitor the system.
Perhaps you can snag one of the radios and read it.

Yup, MCH mentioned it.....but it seems to have been lost in the mix. But the HP-1 works wonders for getting the LCN and of the 12 systems I have tried it on I found only 1 was right in the RR database for the LCN's and now those systems all scan better!

Topic: 3757 Message: 5941

How does location based scanning handle quick key settings?
☐ Does a systems and/or groups quick key need to be enabled for the GPS to recognize/acknowledge it?
☐ If I start with no quick keys enabled, plug in a GPS, will any in range systems/groups become enabled? If I then turn the off power, remove the GPS, and turn power back on, will all the quick keys that became enabled with the GPS revert back to being not enabled?

Thanks,
Mike

>
> If you start with all elements locked, plug in a GPS, all in-range elements are unlocked. Then, drive to another location that results in some additional elements being unlocked and some previously unlocked elements being locked. If you then turn off power, remove the GPS, and turn power back on, all elements unlocked by the GPS at any time during that session will be unlocked (since those that it unlocked, then later locked were temporarily locked).

Or they could have heard their transmissions coming from someone not on their team, or found a scanner during surveillance.

But, it is technically possible to determine what frequency a scanner is monitoring if you know a few technical details about the scanner. I used to do that with neighbors. You can monitor the local oscillator frequency. But, that certainly would not be effective from a mile or two away.

Not really, as the XT does not have the graphical interface that the HP has. Of course, a similar feature could be added, but I would not hold my breath.

Also, even on the HP, it will not work effectively if all the frequencies entered are not used on the system. IOW, if you have a frequency that is not part of the system, it will not allow you to set the others it did find. It will still display them - it just will not allow you to set them into memory automatically. You would have to set them manually. (still much easier than finding the LCNs other ways)

Oh here goes.
I wanna see them implement a battery charged alert for the scanner.
And allow you to set it's volume and tone sound.
SO when you're using the scanner and it's on, and your battery is at full level, it will beep at you or flash at you to let you know that your battery is done being charged.
I am thinking of writing uniden with this request.
Wonder if it'd do any good?
I mean it wouldn't be hard to implement ya know.
What do yall think?

A few thoughts:

1. As you posted it, Uniden will surely be aware of it (via Paul Opitz).

2. How would you determine a 'full charge' on a set of 4 cells in series? You could use an arbitrary voltage, but it will be just that - an arbitrary number and will be undercharge on some cells and never reached on others.

3. You should charge your cells in a charger designed to charge cells of that type. That means a charger that can charge individual cells that can determine when the charge is full for *that* cell and turn the charge off. I like the Maha units personally, but there are other good ones out there. You should not slow charge the cells in series as the scanner does.

4. What you are proposing is much more difficult to implement than you think. Thats why all the chargers that are sold charge the cells individually. It would require a redesign of the scanner to put all the cells in parallel for charging, with individual charge circuits, then switch them to series to run the scanner (or keep the cells in parallel and use a voltage converter which would lose efficiency).

SQK/GQK status is not affected by location. Only lockout status. So, if the SQK/GQKs are disabled, they will not be scanned regardless of your location.

Sometimes, people need a reminder that others have the capability to monitor them and there are alternate ways of sharing info. They cannot tell if they are being received with certainty. I was a security officer/dispatcher on a college campus for 2 1/2 years. Sensitive information was best handled by phone or in person. Not over the air. As a ham, our ARES group knows that everyone with a.scanner has the capability to receive us. The only exceptions are packet communications and digital voice like D-STAR. We maintain professionalism because we know people can hear hams.

I'm in the volunteer fire service here. Not only do we expect people
to be listening to our traffic, it's a well known and accepted fact
